

401st Knowledge Seekers Workshop

Key Words

October 07, 2021

Note: Summary has not been checked by KF. Please listen to original recording and read English Transcription after the post. (Summary by KF Brazil)

KS start showing their work again; H plasma ("virgin H") made from nuclear radiation is only way to travel in space not H Gans; Individual portable EU; 100 million investment Chinese government confirmed; 20,000 m2 factory in Iran started; New protocols for fast mutating energy packs

(Note: This is another part to H plasma discussed in 392 KSW about 2:47)

The Enhancement Center (EC) is well organized in a massive area
EC will become the center for excellence for the new T
We have realized that KF is not about Corona nor Gans's
KF is about a new way of travel - a new way of living - here and in space
Two new Enhancement Units (EU) were shown - vertical (V) and horizontal (H)
Hope to put together a new television team in the center - professional
KF has established a new permanent position in Austrian center
Many of you can come in and see, and extend the understanding of the space T
Collectively as Knowledge Seekers (KS) we'll bring new dimensions (D)
Factory in Iran will support nation with plasma (Pl) T for energy
First time KF has entered direct work with a nation and a government
New MaGravs for energy in Iran has been tested - production this month
The T is also taking shape in China
First flight systems will be shown in the coming weeks
New EU for Vision will be released around the world rapidly - in hands of KS
The blind and people with brain damage will be able to see again
The first sets of these EU will be delivered to Arizona
Endeavor rapid deployment - fracture units - brain growth systems for stroke
Then cancer systems and the rest
KF has entered the true phase of delivering the T - gone into full production
KS need to spread the knowledge
By confirming correctness of T - silence the many critics sitting around the KF
Expose those trying to catch a fish from dirty water
We'll start creating our own scientific progress data - others can monitor
We entered the phase of what we call - balance technology
6 passenger space flight units will be tested in the lab in Austria
KF from this week on has entered massive commercialization

Had enemies within - which systematically tried to destroy us step by step
Now we have gotten rid of the biggest enemy of the KF in past 12 months

October 21 KF will release facts about - the people we kicked out or left
They were spies - releasing information to governments to stop KF developing
2.1 TB of information obtained by KF team - over 20 years
The spy worked for the Belgium authorities - trying to discredit and destroy KF
They had full knowledge of the murder of Fabio - they knew beforehand
This is why KF has been running into problem - even today
The person has a massive history in a big organization of pedophilia since 1975
They infiltrated the KF at the highest level
Now we release the truth about how we have been damaged
Now the damage limitation has started - there is no more damage to be done
They had been working closely under cover of the "pillow" - but as a spy
The success of the KF has come because we got rid of the biggest spy
They planned the death of Fabio - it was supposed to be me
We are very open about this and give this as evidence to the court.
Many of you got tired of (hearing) these things over past years
But now we have terabytes of information submitted by the lady

We will try to test flight directly from the KF premises
The VEU and HEU has already been successfully tested in one or two cases
Delivering high tech space T - to replace every other means health enhancements
KF will release massive amounts of T - we would like you to be part of us
We are not about MaGravs anymore - we are about space development
Today we allow the KS to teach and share knowledge - like in past

Summary of Dr. Guatua - Kenya - eliminate odors with Gans
Summary of agriculture trials in China by Wang Lyn
Kiwis, cucumbers, cotton harvest - for clothing
China has confirmed 100 million investment in KF - another 19 factories

Investments will begin in USA - same as in China
What is the next step of the space development?
Where does the KF space T will take us? What do we expect to see?
Two and half years ago plans for expanding military - now all is silent
Pressure on governments to find new solution - put forward KF technology
Show KF is a technology - create new jobs - new dimensions
Everyone is ready to embrace the new change
"Go out and start sharing" the knowledge - in a way people can understand
Walk away from connecting KF work - suddenly to Corona
We have the solution for viruses in space
Do not get attached to one thing or another
If you get touched by virus - protect yourself with technology
Teach the broader aspects of the technology
Cotton harvest in China using the Gans T
Six months ago we supported a cotton farmer with the Gans's - now harvested
Cotton seeds soaked in Gans - no fertilizer used - (for the T-shirts in KF Store)
KS made blanket - feels good - not cold in winter - not hot in summer

It's like the cotton field became another energy pack to him
 When took cotton from testing instrument - fields still registered
 Saved the seeds grown in Gans process - to plant again next year
 Producing crops totally naturally - without any modifications
 Cotton harvest increased by 2 or more times
 KF China has new policy - give Gans free to farmer - share part of excess with KF
 This method of sharing - spread KF technology rapidly though farming community
 Farmer increases his income without any investment - shares part of increase
 Planning to give thousands of farmers will be given Gans freely next year
 We are walking the farmers out of poverty - by our example
 Moves farmers and nation out of poverty - without government investment
 Q: Is Hydrogen (H) a good energy source for future - plasma point view
 KF looks at H in totally different way than energy industry
 Space level Hydrogen is hidden from public - we'll never teach it
 Gans level H and CH₃ - is for human level use such as agriculture
 We develop a different type of H for space development - as plasmatic M fields
 H is used in flight tests - enhances M fields of plasma
 H plasma is only space fuel to take man across Universe
 You cannot (make space flights) with the Gans of H - and the rest.
 Space H & energy is presently beyond understanding - but it has been used
 Most KS do not have the concept - understanding of space T at that level
 Two early reactors use H in the space plasma level
 H in reactors created from nuclear developmental radiation
 H created from fields - base zero - (Is it virgin H?)
 Game played with H for cars and the rest - is a gimmick - compared to space H
 Only way to access space - through Iran's centrifuges - H through nuclear power T
 R: Is the H part of the lift T for the so called flying car T for use on earth as well?
 K- Yes, But not the H, (1:56). the way you produce it.
 R: You mentioned atomic H - early days of the plasma group. Is that what you are referring to?
 The way U makes H - from zero - can control its gravity and M fields
 It's a nuclear weapon's technology
 No wonders I can't get anybody to show their spaceship
 Same as what we call plasma
 H is one of the most powerful weapons T in the U.
 (By) weapons (we mean) for protection - for deep space travel
 The H is made from cosmic rays
 In these systems, we produce cosmic rays in a very specific way
 Then we gather plasmas and what we want to do with them
 Through Iran's fast breeders we can access large amounts of cosmic rays
 We are not after weapons - to create what we call, uranium or plutonium
 It can only be accessed through 30,000 rpm - Iranian scientists have managed
 H can be used for gravitational field creation
 The future of deep space travel depends on these fast centrifuge systems
 (Cosmic rays are created) - without conversion to nuclear material
 Iran is only nation that has access to 30,000 rpm technologies

Use this system to travel - part of it is for feeding - can also change directions
Natanz nuclear center is key to H creation and future space T for the man
Why we are working to bring cosmic ray H creation into operation
I originally developed this in very simple way - achieved lift and motion
For deep space travel you need a continuous field flow.
Later on bring down to a level for - cars - transmutation and transportation
H Gans will not work for space travel - only through cosmic rays
I don't know any scientists at the moment who has such a knowledge.
It is part of KF knowledge and belongs to upcoming space development
All negotiations with governments for H technology - will be done through Iran
Iran has appointed an officer - in this respect to KF and this kind of work.
Let's see what happens in collaborations - KF and the Iranian administration.
If we do not succeed the way we plan, we will take a new course
New EU solved problem of metal implants - handle each case individually
The new HEU can isolate certain parts - can control the reactors in that way
We can pinpoint accuracy to the center of the tumor
We should be able to withdraw or isolate certain environments too.
A new system "Individual Portable Enhancement Units" - already been tested
System works directly on the tumor itself - doesn't matter what kind of tumor
Then we handle the secondary conditions through the HEU or VEU.
These units can be used - instead of open heart surgeries
Gradually clean blood vessels up - instead of surgeries
We will mass produce it for specific conditions
Heart repairs without operation, and those kind of things
We foresee a time - no need to change the heart valve
EU are not medical systems - there to enhance the body function
There are contractual agreements to purchase EU
You cannot just buy one and think you can use it at home
The system has to be available for the public to use - supervision by doctors
The EU have become more and more accessible to people - affordable
We have officially started the production and distribution of all the EU
We have Body - Horizontal - Vertical - Vision - Fracture - Individual -- EU
Process has been completed for EU - setting up around the world
We are now ready to deliver - rapid deployment & application worldwide
Q: Kay asked how to move with government officials in UK
You can approach most of the governments- it depends how they perceive - work
In China KF worked with officials for 3 years nonstop
KF interfaced with officials - agriculture - military - universities and others
Now Chinese have released first hundred million investment to KF - it will go public
Other governments will start understanding and releasing the same position
Soon we'll make the same announcements in US
How Chinese government handles first phase of KF - will be in public domain.
First it was patents - then lectures - open offices show it's reality - now factories
Now the governments take notice - this is the difference

Massive work setting up companies in China - government investment

KS across China helped with - Corona - agriculture - government watched progress
 With Chinese backing - whole angle to KF development around world will change
 KF Markray has now reentered the American stock market
 I resigned as the CEO of the company - but we have controlling shares
 The same will come with Mexico
 Once one or two nations start rolling - the other governments will roll behind it
 We stopped the massive negative campaign of lies and accusations against KF
 It's thanks to all of you KS being in Iran - London - Romania - Africa- the world
 Mr. Keshe thanks Kay and family for all support - 20,000 sq meter factory Iran
 Q: Is it possible to collide when traveling with the plasma of light?
 Impossible to collide using plasma M fields
 Creates field in specific way - that there is a space gap between interaction of fields
 It will be impossible to run people (with cars) - over more or less.
 Crashing cars will become impossibility at any speed
 Fields always interact at opposite poles - never come close to encounter
 It's the same with space T travel.
 Unless you change polarity - otherwise impossible to collide
 Reducing number of H in nucleus to 1 - was it achieved?
 Explanation given was - "ultimate understanding of the work"
 We always achieve singularity of what we call an atom. You call it a H.
 We can singularity pick what we need, and add to when we need it.
 Big differences in types of - "plasma technology of H"
 It's understanding what that condition of H, is created, is needed for what purpose.
 It's again use of a common language, which brings a misunderstanding.
 The H is the same - but the purpose is different
 Understand how and where to use same H - to get different results
 Most KS have not understood - terminology and application of same thing
 Understand how to apply the fields and their interactions
 If energy packs (virus) is over how come Romania has high mortality rate
 Whole world is entangled - energy packs are mutating rapidly
 New (Cup of Life) protocol to be released in 7 days
 Problem is the governments have to collectively apply environmental changes
 Until collectively handled - energy packs will float everywhere
 These energy packs are all over the Universe - need to learn how to handle them
 These energy packs are the beginning of the change for human race
 We mutate ourselves - every time we encounter (energy packs) in the space
 We go back to allowing KS to share how they are developing the technology
 KS should prepare ahead of time what they want to present in workshop
 Do not want to repeat abuses of past - KS sharing and thinking they're a guru

ENGLISH TRANSCRIPTION

(:11). K- ... Today is the 401st teaching. opened the KF Enhancement Center,
 Exhibition Center, and we have the pleasure of many Knowledge Seekers (KS) with us to
 be, in the coming days and weeks the TV team will release the videos of the opening,

when they finish the production . Today we'll share some pictures with you of the Enhancement Center (EC), is well organized in a massive area. It's become the center for excellence for what we call the new T. Where we introduce the new space systems, the new T in the space, where we separate the what we call the jet propulsion and rocket T, to the way the system, the U works. Many KS around the world joined us in the opening, and it was a pleasure to see that KF has found its own new center, its own position, ... and new ways to introduce a new space T. This center will expand into a much bigger structure and center for excellence for manufacturing and teaching. As we announced in the teachings, in the 2 days of the opening, this center will become the center of excellence for teaching the new space T.

Something we have realized during and since the opening of the center, is that we are not about Corona, we are not about Gans's. We are about a new way of travel, we are about new way of living, (:14). not only on this planet but in the space. The 2 new Enhancement Units (EU) were shown, which is the vertical (V) and horizontal (H), and the process of introducing new systems will be carrying on in this center. Hopefully, a new television team will be put together in the center, which are professional to show every aspects of the T step by step. We bring in a new team of research and .. developments for space T. Now that we have established a center, we have established a new .. permanent position. Many of you can come in and see, and extend the understanding of the space T.

This is a space center and not as we've have seen in articles, and other comments, just to do with Corona. This is where man needs the knowledge of the space, where we travel in, with the new knowledge and T. We have to realize that the KF new space center is where we will show new understandings, where we collectively as KS will bring new dimensions (D).

We have seen the factory in Iran has taken place and shape, and will become the center to provide what we call, backup for Iranian nation T, to support Iran with energy, with the plasma (Pl) T. It's the first time, (:16). KF has entered direct work with a nation, with a government. Thanks to the Iranian KF team the factory goes into production this month, and we support .. energy production through the new MaGrav systems, which is already on the tests and has been developed as the full organization factory. We have seen the T now will take shape gradually in China, the same. It's the time, not only show the spin-off of the T, but what T can do.

In the coming weeks we'll show the first flight systems in the center. We know what we are heading for, and we know how we will release the new EU for vision. A hundred units have been ordered, and will be distributed around the world very rapidly, as they are the small packaging system, and they will be in the hands of the KS around the world. Where the blind can see, where people with the brain damage loosing sight can see again. The vision of the man, speaks the truth about the man. When you give vision back to a blind (man), you give him integrity and dignity. We have the T, and have tested the T, and in the next few weeks we'll spread this unit as rapid as possible across this planet.

This is a collaboration and conjunction work with the Chinese KF and KF Austria, and the first sets of these EU will be seen in Austria, and then will be delivered to AZ. In this process, (:18). we will endeavor to start delivering rapid development, deployment technologies. The fracture units, the brain growth systems for those with the stroke. Then the progress with what we have seen with the .. cancer and the rest. Now we have entered the true phase of delivering T, not in 1 and twos, the KF team has gone into full production, and you will see the benefit of it. We need you as KS to spread the knowledge, and with what we show and .. deliver, confirm the correctness of the T and put silence to many critics, which have been sitting around the KF, and those who have used our development time, and what we call exposure, trying to catch a fish from dirty water.

In the coming weeks we'll release more data directly from the people who have abused, which means we start creating our own, what we call scientific progress data, where the other scientists can watch, doctors can monitor. We entered the phase of what we call, balance technology, where the EU, which will arrive in Austria the first set of .. space units with 6 seats flight systems will be tested in Austria with the lab, where we can initiate the first stage flight system. Then it will be transferred into the appropriate positions, (:20). to be shown for flight.

The KF from this week on, has entered a massive commercialization system, both in America, in Mexico, in Iran , and China, in Austria and we'll follow with Nigeria and the rest. We have invested massive amounts for finances in past 5 or 10 years. We had enemies within, which systematically destroyed us, tried to destroy us step by step. Now we have got rid of the biggest enemy of the KF in past 12 months.

On 21st of October KF will release facts about the people who left, we kicked out of the KF. You'll understand who they are, who they have been , and how they have been close in the KF have been working as a spy, ?? releasing data and everything, government to stop us developing. Some 2.1 TB of information has been achieved, and has been obtained by the KF team, by the same person trying to discredit and destroy KF, over 20 years, continuously undermining the development and worked as spy for the Belgium authorities. One step ahead of us, even the.. full knowledge of the murder of Fabio, they had access to, they knew. We release this information after the 21st of October.

It will be very clear why KF up to now, and even today is running into problem as one person with a massive history of pedophilia from 1975, in big organization infiltrated the KF at the highest level. (:22). Now we release the truth about how we have been damaged and now the damage limitation has started, where there is no more damage to be done. They have been working closely under cover of the pillow, but as a spy, and head of the biggest pedophile group in the world since 1970s. They used the KF to do the same, and now the truth will be released.

We wait, we celebrate the success of the KF, but the success has come because of one move in the last few months, when we got rid of the biggest spy in the structure of the KF, to stop us developing, and preempting every move. Even knowing and planning the

death of Fabio, where I was supposed to be killed. We are very open about this and give this as evidence to the court. Many of you got tired of these things for past years, but now we have terabytes of information submitted by the lady, thinking, that the officials and security services will work with what we call, one of the biggest ladies involved in pedophile in the history of western Europe.

Going back into the work of the KF you'll find out, that the KF has turned into the space program. We will try to test flight directly from the KF premises, and at the same time to develop T, that is for space, and can be used by every single one of us. The KS in Linz have seen the first horizontal and vertical system, (:24). hopefully next week we will show you the videos and the first EC, EU, that use this T. The EU V and HEU has already been successfully tested in one or two cases. We are looking forward to more, and make it complete for delivery into the KF centers.

We are from this month on in the business of delivering high tech space T, to replace to replace every other means of the what we call, health enhancements around the world. KF will release massive amounts of T, and we would like you to be part of us. Some to the people you see in the pictures are part of the R&D in their own, they are the KS for years, they have been developing and we have been in progress creating new conditions for knowledge.

We are not about MaGravs anymore, we are about space development, .. understanding new knowledge and new T. In the process of the teaching today, I try to change the position in a way, we haven't done this for a long, long time, is to allow the Knowledge Seekers (KS) to teach, .. the KS to share knowledge with us, what and how they have developed technologies. We used to do this. We used to allow the KS to show what they have developed. They used to bring their T to show us. And we saw immediately through the people who we have gotten rid of in the KF, they used to befriended, (:26). and then attacked in the background with their families and their friends. This process has stopped, we don't have this anymore. We are going back to the process that KS can show what they have developed, and what can be used on the back of this T, by them, that it can be applied by the other KS, and other organizations for further space development.

I thank you all, especially those who came to Linz to be with us, and to share with us, and the beautiful time we had in opening of the Exhibition Center. In the coming weeks and months, gradually the center will become the center of excellence for all of you to start sharing technologies and to manufacture goods, which will spread and bring confidence in the what we call, the new space era.

I would like to ask Rick to take over, bring in the KS who would like to share knowledge with us today. ... the beginning of the 400 series teachings.

R: I am not sure how

K- I threw you in the deep end, huh?

R: (:28).

(:30).

K- .. We used to encouraged people to show their T. Now if there are many people who have experimented a lot in different ways, and different manners. We would like to bring that sharing of the knowledge, the common knowledge with everyone, back on the table again. We need to encourage back the knowledge, it's not to be afraid of all the attacks and things, which was carried on and still is going on, because we will spend one more session explaining exactly how KF has reached to the point of where we are today. How we got, (:32). without knowing, embroiled into pedophile groups, where the lady we kicked out, has been involved in one of the largest pedophile organizations in western Europe since 1970s, and then they used targeting people, KS with children. Now we are safe, we have managed to close that door, and we can openly speak about it.

The history will talk about itself, and to us how we even managed to get KF. Now when I look at the information in front of me, sometimes, we have been very lucky to get into this position. Every step of our work has been planned, blocked, and in so many ways, one by one, preplanned to stop.

KF has become a massive organization, as you have seen in all sorts of directions. The Chinese operation soon will become a massive rollover of knowledge and T, the same will come from Iran. As we said, because of these situations people have started talking to us, and opening the doors to new knowledge and insight. In the coming weeks... you will see the new EU, which are in progress and development. The KF will gradually spread the knowledge on the same manner and the same way throughout the world. Share with us the knowledge, and we share with the world, the same way as what we have, (:34). our knowledge, to develop, to extend, and to achieve more for all of us.

Maybe today we opened the door for you to be able to share, think about it, bring it back in next week, or week after, or in the following teachings, let us know what you want to show. We'll show what experiment you have done, and what you have achieved, and with it we start progressively developing what we call, systems for people to refer back to, and to be able to go to, to share and to apply.

R: We have experts in the field .. Guatua and Lisa ..

Q: Guatua . (bad connection) (:36).

Q: Wang Lyn: to share agriculture projects.

K- .. do you want to tell us about China. What is the progress.

Q: .. China has a new policy to replace chemical fertilizer. Even to change the GMO. A lot of research. We start to get government inquiries .. (:38).

New policy .. want to the life to be more rich and healthy .

New year we'll see a huge application on agriculture part.

K- Nice to see how China will benefit from the new T.

Iran agriculture harvested rice using the Gans T. Farmer said he doubled harvest .

(:40). last winter wheat .. this year now the same land used for the Gans .

By 2025 China will become self-sufficient, .. grain production nation. New T for growth of the harvest have been developed for testing next year in China and Iran.

Q: Dr. Guatua, .. I would like to share screen. (:42). ... bringing peace through .. plasma science and T. Some of my research work here in Kenya. Environmental air cleanup livestock feed. 2020. (:44).

This study was to test the efficiency of CO2 Gans liquid plasma MaGrav, MG fields in elimination of offensive odors, from livestock shed as well as open air drying of livestock field. expanded to include outdoor toilets. markets and garbage dumps . Offensive odors completely eliminated . CO2 Gans in plastic bottles .. (:46). places them in 4 corners, and one hanging in the back .. 7 bottles. These bottles are the same because there must be some difference naturally . as soon as I place these on ground, smell immediately gone, ... since 2018.

Did same at outhouses of school.
(:48).

A lady put Gans in greenhouses in a very dry place. After placing the plants brought back to life.
placed in star formation . (:50).

Pineapples drying outside, used star formation , they dried without rotting . ..

(:52).

Conclusion:

(:54). that there is improvement in pineapple growth.

(:56). every animals are feed CO2 Gans liquid plasma .

K- Thank you .. It's beautiful the work you do. We learn more and more how the KS are using the knowledge show pictures in China.

... (:58). .. (1:00).

Shows video from China. (can't hear very well ...)

This is the Chinese Tic Take... harvested 100 Kiwis

.. Boss told him to only use Gans not fertilizer .. on whole farm. (1:02). Taste is very good ..

They put more than 3000 Gans bottles to cover the whole fields. I stayed there 1 night, I could feel all the energy fields from the huge Gans magic .. like floating on a boat ..

..

(1:04). Okay this one is enough.

K- Rick you have another one you want to play.

Q: This is another organic farm. We will build all as an organic farm. You can see the cucumber . Before only every 3 leaves can grow 1 cucumber. Now every leaf can grow cucumber. That means we can reach 3 times or even more then the old way of harvest.

The taste is very healthy. They spray 4 times (Gans) but they also use some bio fertilizer, but that is very expensive. (1:06). they combine and but only use 1/4 recommended dose of bio fertilizer... achieve good harvest.

Is there anything else?

K- How is your development in China, now that you set the factory up and going into production.

Q: are factory is still in decoration... office ready this month. . Production line ready next month. We heard that Chinese government wants to invest 100 million dollars in our project. start negotiations.

K- 3 years they have been waiting for factory .. (1:08). Now they have confirmed 100 million investment will be going to some another 19 factories similar. in conjunction with the KF. Thanks to all the KS work in China which have kept the knowledge in forefront. Thanks to people like WL, Chou Jin many more in background. .. You can confirm. the Chinese officials themselves have confirmed that they have allocated this 100 million for collaboration in past 2 - 3 weeks ...

Any other information are you there Rick (1:10).

Share more pictures of Linz exhibition center. The vertical EU is the far system .. The KF is in 2 floors. and TV center. Rick has dropped off. (1:12).

Q:

K- We go back to teachings and shared some knowledge, and we try from now on, to share what we call, share knowledge and T, in what we call, in appropriate way that more future KS can use the know-how and the knowledge for changing conditions, and for bringing balance into what we call, the understanding and T of the KF.

Our ultimate goal from now on, now that we have opened the center is establishment and what we call the flight tests. This is where the change will come with, as much as in sharing knowledge and T with others. Receiving as WL said, a hundred million investments from the Chinese government for the first phase of the first factory, out of another 19 to be built, shows the correctness of the T, proven to one of the largest nations in the world.

At the same time, we see now the same process will take shape in the US. KF supporting its organizations in USA, will soon show the same operation and investments from different governments and nations. We still operate, (1:14). under the banner of the technology in exchange for peace. In the coming time that banner will be expanded into, not only for peace, but in sharing space T together.

I see it as part of the responsibility of the KS to bring Kenya, China, even Bangladesh, or third world nations as they call them in South America, to all be part of the space program, that no nation is left, and the space T is not a privilege to what we call, certain nations. In coming months we'll invite those of you who have experience in space development, irrespective of your color, race or language to join us in Linz for the first structure setting of the flight systems in the space development of the KF. We have a massive opportunity in the new exhibition center. We will disclose further and further, as

step by step things have taken shape and we develop more. We have the facilities to share knowledge with many governments, at the same time with KS through governments.

What is the next step of the space development? Where does the KF space T will take us. What do we expect to see in this new development? We share knowledge but how will this knowledge bring fruits of what we call, peace and dividend of peace for all of us. We all are faced with the new dilemma. (1:16). We are all trapped in changes which, we have not been used to. If you go back maybe 2.5 years ago .. we were talking about how we take the people into the space station. Who will launch the next machine to be in the space for a few seconds. We were hearing in the news how military forces were planning exercises to show alliance, and to show new T of weapons T.

In past 2.5 years all have become silent. Mankind has changed. Mankind has become imprisoned with one small virus. Mankind has changed his course. Many of us lost jobs, .. lost future in what was to be, and now is not. We see end of weapon T, because there is no one to buy weapons. Most of the money is going into injections, supporting national structure for health and people without jobs. We see more and more pressure on governments to find a new solution, to find a new D. Through KS and your work now you have to become that alternative. You have to take these to your governments, that there is an alternative, (1:18). not for Corona, but for new jobs, new space T, new D. In that process we have to show KF is not just what we call, a knowledge, but is a T. It's a T where governments can rely on, creating new jobs, and governments can rely on creating new D.

What is the next step for all of us? How can we as KS establish centers where like what we seen with Dr. Guatua, the T can be transferred from one nation to another, from one village to another. As we seen with WL, .. in Iran everyone is ready to embrace the new change, because it is free, it's our knowledge and T. One of the best things for us, is to what we call, "go out and start sharing," sharing the knowledge as much as you can. At the same time, share it in a way that people can understand, it's not a source of enigma, it's not something that we do not know, that there is something different.

Try to walk away from connecting the KF work, suddenly to Corona. Corona is something temporarily. Do not mention, (1:20). do not goes towards portraying we have a solution for Corona. We have the solution, people, we have the solution for viruses in the space, nothing to do with the name of the man's problem, today's Corona, in the space another virus will be blown out, whatever else. So we have to change our tone, .. the way we educate, the way we share knowledge.

Do not go around the framework that we have a solution for Corona. We don't have a solution for Corona. We have found the way viruses work and we have found the solution for viruses in the space. If man wants to use it for present time, under any name, that's his privilege. This is the sharing of the knowledge. We have to teach our KS, that do not get attached to one thing or the other. We don't have a Corona solution. We have a ?? solution in the space, can create condition, and holding energy packs away from the physicality, that life can become bearable.

So this is how we to reeducate ourselves, understand and share the correct way, that people see a bigger picture of the knowledge, a space T, agriculture, what we call the use of it in different application, and then in energy, in health and the rest of it. Open the horizon of the knowledge, and walk away from talking about one thing and one matter, which is now, because it's a hot cake. You get touched by a virus, you know the solution, use it to protect yourself, and walk away from it. (1:22). That's all you need to know, it doesn't matter what name you give into it, what name it might have. Try to teach a broader aspects of the T, the space T, and then, if it comes to one thing or another, just touch on it, and that's all you need to do, and let the people understand and explain and then themselves to develop it.

Rick I see you are back.
Go for a break.

Proofed to here >>>

>> BREAK >>> 401 KSW Oct 7 , 2021 (1:31).

K- Yes .. I was just looking at something I was forwarding you to see. This is the what we call, the cotton production this year, which has used Gans T in the, our KS from China, Chou has just forwarded these to be shared. .. (1:32). You have a video there. Have you received it ..

Q: Today is the harvest date. Chou is at the farm harvesting the cotton ..

Videos of cotton.

K- If you remember, we told you about 6 months ago, that we supported the farmer with the Gans's. He already tested the Gans's last year. Would you like to explain more WL.

Q: Yes, this cotton is made by the same, we gave the Gans to the farmers and they soaked the seeds, and planted. This time they didn't use any fertilizer, and used the ?? to spray. We are expecting the harvest, (1:34). for a long time. Since last year they planted maybe several "mole"... when

He said, the cotton changed, it make him feel like comfortable. With 6 kg (blanket ??) in the winter and the summer the same, but he feel the same comfortable. He doesn't feel hot in summer, and also doesn't feel cold in winter. It's like the Gans field became another, like energy pack, package him. It's good. We sent cotton to an instrument to test .. something to test the field. After they take out the cotton (from the instrument) it

shows there is still something there. The field, energy there. It shows those cottons have already carried the Gans MaGrav fields. Use this cotton to make clothes (1:36).

Plays video of cotton.

K- Do you have a second video? This is the harvest we have been waiting for. KS around the world are .. trying and testing everything in how they can improve the agriculture. This video is live from China.

This is the new harvest. .. the harvest increase we'll know, once it's completed, this harvesting. The KF will take the seed after the harvest, preserve it in Jian Jiang, and next year the new seeds totally grown through the Gans production will be used by them (1:38). for the next cycle, .. agriculture cycle. Then we're producing .. the harvest which has no modification in a natural process, but increasing the harvest by once or twice more than what it is. The KF China has taken a new policy, what they have done this year is they give Gans's to the farmer free, on a contract basis. That the farmer knows how much harvest he can have from his work over past years, and what's the national growth (average) for the harvest. Let's say if they produce 2 tons for a given area, and the national average is 2 tons, because the government controls everything, we know roughly. At the end of the harvest, if the farmer produces 3 or 4 or 5 tons, then the KF gets paid with the difference in the increase in the harvest. IN a way, what we have done, we have given the Gans freely to the farmers, and if they increase the harvest plus, percentage of the increase plus, will come to the KF as a payment, that is allows us to research more. This way we rapidly grow into .. the farming community in China. Which means farmer increases his income without any investment, but shares part of the increase with what we call, the people who increased the harvest for him. This approach has always worked in many aspects, because the farmer who has been used to maximum 2 ton, and lives in the poverty line, (1:40). now he takes 3 or 4 ton, has a better income and the KF takes part of it, off the increase, that allows us to help the other farmers in the next generation.

So most probably in the next cycle, next year, thousands and thousands of farmers will be given Gans freely. In sharing the harvest, the increasing the harvest on a national average basis figures released by the government. We are walking by example, the farmers out of poverty. This is what we said from the beginning.

This is why the Chinese government is prepared to invest hundreds of millions with the KF. We are not there to prove, we gave you something to give us. We give it to you freely, you benefit by it, and you share. This will become a massive movement within the KF and the Chinese agriculture. Where there is no need for fertilizers, but they increase in harvest, not only moves the nation out of poverty of importing grains, but it moves the farmers out of poverty in a direct way, without any investment from the government. KF is the investor.

In that position with the new factories setup, will allow the whole nation in one massive way, next 2 to 3 years, to become a nation self-sufficient for grain. Now you have seen

the scales, you've seen the others, and then we'll become part of the what we call Chinese agriculture. Every single KS in China has worked so hard, and now we see the harvest, we see the fruit of the work. This is why we went into China to bring what we call, life, (1:42). back into some 25 million below poverty line farmers, which in the next 3 to 5 years will become self-sufficient and out of the poverty line.

Giving the Gans's freely to the farmer was the biggest move the KF made in China, in freely giving access, and people like Chou with his team in Guo Jo, encouraging the farmers to receive these freely, and then prepared to share. This will bring change, to what we call the grain policy in China, and at the same time as WL told us, the reason you hear the Chinese invest with us, is because we invested in China as KF and as KS. Any other question .. .

Q: WL , you should see the aborigines (egg plants) and the flowers ..

(1:44).

(1:46).

(1:48).

Are there any questions anywhere?

It's good to be able to share with KS what they have achieved and we kept away in direct teachings all the time . Now we bring back what they studied and what they developed and how it is effecting their .. progress.

Are there any questions

(1:50).

Q: . Can you help us to understand about Hydrogen (H) as a future for energy, is it a good idea or not from our plasma science point of view?

R: I guess H as a fuel has been in the news recently. They can create it with solar energy, because the solar energy prices are coming down, it makes it more lucrative to make H as a fuel. But of course what do you think about H as a future for energy ..?

K- H from KF point of view as a M field energy source is different, than what you speak about H today in what we call energy industry. We look at H in a totally different angle, in a totally different view. We use H in a very different ways for different applications in the Gans T. Most of the H T in space T is hidden from public. We'll never teach. It's part of the T, which is for space development. In what we call, agriculture, human level, Gans level, which you create the H and CH₃, and the rest. It has its own application. (1:52).

But H as a plasmatic M field system, which has never been taught by the KF. We never teach it. But we develop a different type of H for space development.

This is not something new, originally it was used in .. flight tests, and it's a different way of using, and enhancing the field of the M fields of the plasma, we call the H. In deep space T, what you call the plasma of the H, is the only more or less space fuel, which can take man across the U. You cannot do it with the Gans of H, and the rest. Space H and

energy is beyond the understanding of the present time for many people, but it has been used.

We use it very, what I call, as a nuclear physicist understanding of the T, in the public and most of the KS do not have, what I call, the concept, or the understanding, of what I call, space T in that level. If you look at this picture, your 2 pictures, (1:54). in the center, when you look at it, in the far end, these are the edge of space plasma T in H. But it is not the Gans H, as you think. These 2 systems use the H of the Plasma T only. But we create the H in these systems through nuclear radiation, nuclear development radiation. These are very advanced H development T. We create the H from base zero. From fields to fields, to G and M fields. The H game played nowadays for cars and the rest, is what I call, a gimmick, to what actually H does and work and used in the space.

This is one of the reasons we pushed open the Iran centrifuge systems, the development of the H through nuclear power T, is the only way to access the space, deep space, not with Gans's, and you hope you create lift and motion.

R: Is the H part of the lift T for the so called flying car T for use on earth as well?

K- Yes, But not the H, (1:56). the way you produce it. It's a ..

R: You mentioned atomic H back in the early days of the plasma group. Is that what you are referring to or ?

K- Yes, we create the H from zero, the way it is done in the U, so we can control its gravity and its M field. This knowledge is not available. No KS has access. It's not a common knowledge. It's a nuclear weapons T.

R: No wonder I can't get someone to show their saucer in their garage. It's very high priority T, that really should be reserved for those organizations, that are designed to be able to handle such things. So that makes sense, it's not really for public consumption generally speaking.

K- No, space T it's the same as what we call in common language, plasma. And people say, oh, there is a plasma in the blood, or we have a plasma T in CERN. H is one of the most powerful weapons T in the U. In weapon, as in a way, for protection. In a way, for deep space travel. You produce from cosmic rays into the H. I was explaining this in a very short way in the opening conference this Saturday to answer one of the KS. We create H from cosmic rays. In these systems, we produce cosmic rays, (1:58). in a very specific way, and from rays we produce, we gather plasmas, and then we dictate the plasma in what we want to do with it, that's why we can change it, convert it. One of the reason we are heading for Iran's nuclear centers in centrifuge in Natanz, is that when these fast breeders, fast what we call cycling systems, we can access large amounts of what we call, cosmic rays. We are not after the weapon to create what we call, uranium or plutonium, in the process of the separation, there are huge amounts of rays, which only can be done at 30,000 rmp (rpm), which the Iranian scientists have managed to have access to it, which allows production of massive amounts of cosmic rays, which allows us to create H in different shape or form. Then used for gravitational field creation.

The future of the deep space travel sits and relies on the fast, what we call, systems which can deliver, rapid .. fields without conversion into nuclear material. At the moment Iran is the only nation, which has the access to such a 30,000 rpm, what we call, technologies. We can travel, we can use this system as part of the operation of the feeding system, and we can change direction. The H technology in nuclear center in Natanz, (2:00). are the key to the future development to space T of the man. This is why we work to bring cosmic .. ray T, H into operation. This is what originally I developed in the space simple way. And that is what we achieved, lift and motion. But for the deep space travel you need a continuous field flow. Then in the future, most probably we'll bring it down to be able to be used in what we call, automotive and car industry, and for transmutation and transportation. You cannot create H out of, the way you do with Gans's for the space T. The H of the space T has to come through cosmic ray collection, which not .. I don't know any scientists at the moment who has such a knowledge. It is gathered by the KF as part of our knowledge and belongs to the upcoming space development. Any other question.

Q: could you help her send an official document to the Romanian government about that topic with the use of H .. ?

K- All negotiations will be done through Iranian, (2:02). president's office of science and T. All our situation now, ?? all our development in that line, will be done through the office of the scientific research of the office of his Excellency President Raisi of Iran. We are in that progress, even with the Chinese, all communications has to made in respect to this and energy, through this office. The Iranian government has appointed, I think, an officer in this respect to KF and this kind of work. We only share, we don't give names to public, and it will be done directly, internally between governments.

R: .. the information was already offered to governments a few years as the KF USB Key, offered to all governments of the world ..

K- Now we see what happens, how we take shape, the collaborations between the KF and the Iranian .. administration. If we do not succeed the way we plan, we will take a new course, but at the moment all our affairs in respect to energy, and space, and defense is handled by the, and will be handled through the offices, as is ?? worked by our KF in Iran.

Q: .. (2:04). .. good Dutchman ...

K- flying Dutchman

Q: .. you said a long time ago that when someone was getting into the EU if they had metal parts put in their body, like a shoulder, hip or replacements, prosthesis, that the current T, they would have to wait for improvements in the T before they could use that. Is that still true with the EU, or not?

K- The new vertical EU and Horizontal EU, in this, we have resolved this matter now. The new HEU is functionality is fully controlled in a different way, and can, but you have to consider in what extent the rest of the use of the system will have on the .. implant. The new HEU, (2:06). can isolate certain parts, because we can control the reactors in that way. We have made a lot of improvements on it, but it can be done, yes. Don't forget we haven't shown, you haven't seen today yet the HEU and VEU hopefully the videos will be

made for it next week. They go for sale for 250,000 each, as of next week. The same with the Vision EU, these 3 units will become an addition to all the Enhancement Centers. We ?? get a bigger opportunity, covers more spectrum and use. ??

Q: .. I have a stint in my heart. So you could get around that?

K- In some cases yes. .. We can isolate some positions, now, if we can yes.

We can pinpoint accuracy to the center of the tumor. So we should be able to withdraw or isolate certain environments too.

The new system has been developed by the KF, which you most probably will see in the E Centers, is what we call, (2:08). "Individual Portable Enhancement Units". It's already been tested, and its work, its function is very unique. For example, if you have a tumor, and then the system works directly on the tumor itself, it doesn't matter what kind of tumor it is.

Then we handle the secondary conditions through the HEU or VEU. These units can be used for open heart surgeries, to use in a short term, gradually, instead of having open heart surgery for blocked arteries, that we gradually clean up the blood vessels with the surgeons understanding what they do. These units will become part of the tool of the E Centers, as we mass produce it for specific conditions, be it for, what do you call, heart repairs without operation, and that kind of things. It's already been developed .. maybe people like you who have a stint can gradually with supervision of doctors who know what they are doing, do a full repair. We foresee (a time) when no need for a change of the heart valve, with the new systems which are getting developed. It just needs a deeper .. development of the T. (2:10).

Q: The EU are still for medical .. ?

K- We don't enter medical, we are there to enhance the body function. All our systems are enhancing the functionality. They are not medical systems.

Q: Okay, so anybody can order the EU?

K- It has to be done within the rules of the KF in the Enhancement Centers. There are contractual agreements. You cannot just buy one and think you can use it at home. It has rules and regulations. If you buy a system it has to be used by public, and it has to be under supervision of the medical doctors and in the centers of the KF. It's become more and accessible, .. reachable. The HEU and VEU, the price which is put in, is become affordable for many people to be able to open centers and to start using it for public.

We have officially started the production and distribution of all the EU right across the production line. It's not only the Body EU, you have the H and the V, the Vision, the Fracture Unit , you have the individual units. The family is growing. The centers, when you go to an EC, (2:12). there should be every possibility to change the position and condition of the body of the man. We don't treat, it's the processing of the body.

We have many enquiries from people how have been wanting to purchase, to build, or organize EC, as of next week you'll be responded to now that we have completed the process of the .. completion of the reactors and EU, you'll be contacted back, or if you

want to go ahead with purchase and setting up of the EC around the world. You will receive immediate response more or less. As of November this year 3 EU a week will be released around the world, then after Chinese New Year we expect to release 1 EU a day, to fulfill our commitments, and at the same time, the same 1 or 2 EU V or H, a day, and a number of Vision EU. We are now ready to deliver, and we start a process of mass production. It took a year and half to develop new EU, with the view of .. rapid deployment and application. (2:14).

Any other question.

Q; Kay, ..

K- Good morning Kay are you still in Linz or have you left?

Q: .. nice to hear you, you sound a bit better than fast ?? company. ... very nice beautiful center and the development is astonishing. Question about trying to get some governmental body or institution involved in projects as are happening in other parts of the world, particularly China. The government there is more in tune with the KF as you carried out quite a lot in a different level. So in the UK ... ?? I have been trying for a few months to get in touch with certain people who are involved in the ministry, perhaps agriculture, (2:16). as well as the health ministry. .. do you think the UK , who is the source of all the trouble in the planet, would that be an appropriate approach ?

K- You can approach most of the governments, it depends how they perceive, and how they work. You got to realize when you speak about China, I spent nearly 3 years nonstop in China. We spent more or less, .. on a daily, weekly interaction with different officials, with different government organizations in China. Chinese success doesn't just come out of being the KF. The KF team relentlessly for 3 years, had interface with the officials, in agriculture, in everything else, in military, in defense, in universities, and has been, we earned our knowledge and respect by showing the T, and at the same time the Chinese organizations are very slow, and with Corona now, it has taken shape. I am sure once, now, that we have been told, that the Chinese have released the first hundred million investment to KF, and it will go public, the other governments will start understanding and releasing the same position.

Soon we'll make the same announcements in US. Everything takes time, now after the Chinese holidays, how it will come, it will be in the public domain, (2:18). how the Chinese government handles the first phase of the KF.

You got to realize we were "patents," we were "talks," then KS did some other things, now we open offices to show that there is a reality to the T, and now we open the factories, and the governments now take notice. This is the difference. We came to an agreement with the Chinese officials some 2 years ago, when we setup in the background, in partnership with the Chinese secondary, what we call, government organization, hundred million based Euro company, which we were 50% knowledge based, and they were 50% capital based. Then earlier this year, they transferred the other 50% to us, that the KF China became 100%, one hundred million company organization, then when we set the company up, factory in Jin Jiang, the Chinese government followed the procedure with .. hundred million investments, and then another 19 of these to follow in the next 2

years. This is a massive .. hard work by KS. It's not just a talk. A lot KS across China, they helped with Corona, with agriculture, with any other aspects, and the Chinese government has kept an overall view of what this T can do, and now they are investing with it.

I am sure in the next few weeks, (2:20). the whole angle in respect to KF development around the world will change. KF Markray, backing shareholding of it, as you have seen, now approved, and now has reentered .. the American stock market. I have resigned as the CEO of the company, but we have controlling share of the company, and we lay out the future for new developments in agriculture and everything else, in US, as much as in China. We will see the next development in the same progressive development. The same will come with Mexico. Now once, when one or two nations start rolling like this, the other governments will roll behind it.

Because up to now, we had a massive, negative 2 TB, what we call lies and accusations, which we didn't know, had been sent to other governments. Now we found out what it is. This will kick back for those who set this way up. At the same time it's not only agriculture and other things, energy, now we go into the space development. This will change a lot of things, for a lot of nations. That's thanks to all of you, all KS being in Iran, ..London, Romania, Africa, everywhere around the world.

Once China makes a move on the KF, the way they have done, you will see the whole structure will change. That's thanks to KF China with a massive factory, which is there under development.

Q: I hope you achieve that as soon as possible. (2:22).

K- Hope, we are doing, closely working with you, as well in Iran, with a massive, your support and your families support, in building the largest KF factory in Iran. I thank you for all your support.

Q: It's a pleasure.

K- KF in conjunction with (Kay's) family has setup to build, it's already built, it's going under operation to become, in next 12 months to 2 years, the largest manufacturing base of 20,000 square meters in North of Iran, in effecting agriculture and the rest of it. And is a close collaboration as the whole of the family and the KF.

Thank you very much (Kay)

Q: Thank you, God bless you, it's because of you this thing is in motion, and helping humanity being a brightest light ever. I hope the sooner the better.

K- The beauty of it is, the harder they worked to damage, the easier it became, because people have to think twice, how could it be. Now we see, changes are on the way. Thank you for all your work.

Any other question (2:24).

Q: .. When we travel in deep space using the Pl of light, would collisions be a possibility if others also travel at the same plasmatic magic field light strength?

K- No, impossible. We did a test some years ago with the professors in electronics department of Ghent University, which we were heading to build the first under, or 200

kg vehicle, that could float. In our research and testing, one of the first things we noticed in the laboratories of the Ghent university, was it will be impossible to collide even with the body of the man, when you use Gans T for motion in cars. Because you create field in a specific way. With the new .. cars, even in the physical D, let alone at the light level, you interact with the fields and create a space gap.

It will be impossible to run people over more or less. This is one of the first things we came to conclusion in testing. We see, (2:26). combination of the changes. Crashing cars will become impossibility at any speed. It's a very interesting phenomena, it will be shown in the up coming time, because you drive in dynamic structure, you always field interact in the opposite pole, similar to direction, which means you can never come close to encounter, to interact. It's the same with space T travel, unless you change polarity of the fields. It's impossibility.

Q: .. I remember teaching from the past where they discussed a MaGrav method to reduce the number of H in the nucleus, with the objective of reaching the amount of 1 H in the reactors nucleus. With the use of this method was the result achieved?

K- When we explained such a thing, that is the excellence of what we call, "ultimate understanding of the work," and it can be done in a different way. (2:28). We always achieve singularity of what we call an atom. You call it a H. We can singularity pick what we need, and add to when we need it.

There is a very big, as I said earlier on today, there is a very big difference in plasma technology of H. We have a H in the body of the man as part of the amino acid, we have as part of the air. At the same time we have a H bomb, at the same time we have H stars, at the same time we have H plasma conditions in the U. It's understanding what that condition of H, is created, is needed for what purpose. It's again use of a common language, which brings a misunderstanding. A H bomb, it's the same H which you are trying to use for energy, is the same H that you use in H balloons, but the same H in a specific way, it moves one of the biggest stars or galaxies in the U.

You have to understand how to apply it, and where to apply it, and how you can use the same H, with a different angle, or property and expansion, that functions one, in the body of the man to move a little bit of energy, (2:30). or becomes part of the water cell, .. motion and power for energy, or becomes part of motion of a galaxy or a universal flight system. This is what most of KS have not understood. A common terminology of the word, does not bring common understanding of the application of the same thing. We separate H in cylinders or in reactors for a specific way. Or we produce H Gans's for the human level consumption, but in a different way in reactors we create the same H, but maybe move thousands of tons of weight, or we create speeds beyond imagination. It's understanding how to apply the fields and their interactions. We say in English, "horses for courses," just because it's a horse, doesn't mean can do everything, to be a runner or a jumper.

Any other question. (2:32).

Q: .. if it's over with the energy packages (virus) so why are we ranked 3rd with mortality and 2nd place with infections in the world.

R: I think he is referring to Romania.

K- Pardon

R: repeats

K- The thing is. .. The whole world at the moment is entangled with it. The problem is that these energy packages are mutating very rapidly. We have recently, we will release in next 7 days, a new protocol through Dr. Arapur in Iran, as we usually do for new what I call the fevers and temperatures, which comes with the new energy packs. A new protocol in how you can convert and divert from it.

The problem is governments have collectively to apply the environmental changes, and they are not doing so. Until that time, these energy packs will float everywhere, and will effect individual persons, or collectively. (2:34). We have not, the only thing we need to understand, is that these energy packs are all over the U, it's not just exclusivity of this planet. We have to create a pattern and understanding of the application of it. It is needed to be understood and handled collectively.

This is the beginning of the change for the human race with these energy packs. In the space we'll change, and will come every time we encounter, in new ways, we mutate ourselves now, how to handle it.

Any other question

R: ..

K- We have been at it for 2.5 hours. Thank you for today and I hope we start to back in the pattern that KS can share in what they have achieved around the world, and how things will turn out to be. (2:36)

R: .. We can remind people if they would like to show examples of PI T they can prepare something, a presentation or some sort for next weeks workshop. Are you open to that from here on in, for people to show the T? would that be ok?

K- Yes, as long as we see what is there to be shown. We do not want to bring the situation we had 2- 3 years ago, that the individuals they come here to gain fame and try, and then they become gurus and everything else goes wrong. We are just there to show, the T and that's it. We want to stop these abuses of, just because you made a presentation, than you become abusive towards everything else.

Thank you

(2:38).

K- I attended last Thursday the Vietnamese teaching 60 odd people fantastic way of teaching one of the old members of the UC there

(2:40).
