

# **Plasma by Order of Magnitude - Age of U - Travel inside plasma - October 28th Conference Introduction to 492 KSW**

Note: Not checked by KF interpretation by KS of KF Brazil

The workshop started out by Mr. Keshe answering questions that arose from last week's teachings. The first one was about why we were using 12 digits numbers instead of 9. This is because we want to make an accurate landing within millimeters, so we don't manifest ourselves above the destination and then fall down on the ground and hurt ourselves. And then the 1,600 km/per hour was for the Earth moving away from the center of the U in a straight line. But he used the word "if," so I am taking that to mean the scientists came up with this figure to be able to say where we are located in the U and that the U is a sphere. But the inherent mistakes in their thinking was that they assumed that the U is a sphere and that our U is the only one, and not part of a Unicose. Even though a plasma is spherical it is not perfectly round and it changes shape according to the influences of the M fields around it. Without this understanding of plasma, there is no way the numbers can be correct. Mr. Keshe reminded us Knowledge Seekers (KS) to try to calculate the true age and size of the U through our understanding of plasma science.

These technical teachings were given for us to understand about how a sphere, which is 3 dimensional increases by order of magnitude and not linear like a 2 dimensional square of length and width. If you want to know the circumference of a sphere you square the radius, which means  $r$  times  $r$ . Then if you have a radius of 100, that equals a circumference of 10,000. The same thing as a square would be just 100, but as a sphere it becomes 10,000. This is what is meant by an order of magnitude. Now you can see that as a sphere grows it does so by a huge amount. You can study this further on the Internet.

This huge increase is what Mr. Keshe refers to as an order of magnitude, and this is how plasmas operate. By thinking about this you can get the feeling that magnitude is a huge difference. Plasma works on the order of magnitudes. It wasn't clear to me, but it seemed he was saying that our senses work on the plasmatic level and by orders of magnitude. Maybe that's why we can sense very minute smells or taste even slight changes in our food.

A KS asked why do we need to do these calculations if we work through the Soul, which is by M field strength. He answered, the Soul doesn't need to do the calculations, it's automatic through the wish and emotion. But as we came out of the physicality (P) into the Soul we have these parameters of our life, so when we go to re-manifest ourselves back into P, then we need them to make the copy of what we used to be. Maybe these calculations will be used to program the transmutation machines. Or is that we need to become conscious of the knowledge, and the calculations are done automatically?

Mr. Keshe again talked about what the age of the U is, and that no plasma scientist would ever consider 13 billion years as the life of the U. It's just too short and that it takes a huge amount of time just to develop the brain of the man, and then you have to create all the organs and other things as well. He said it doesn't matter if it is an animal, human, or whatever. This brings home that fact that the Creation is not in any hurry to do things, like us humans. It takes a slow gathering of fields together, and remember that it is intelligence that is expressing emotion by the manifestation in physicality. If you have seen a picture of a human cell under a microscope, you see all these different components within the cell like mitochondria of the genes and whatever. All these parts have a specific function and were created over time. It's quite extraordinary if you ponder it. What an amazingly beautiful expression of love. Sometimes when we think of long expanses of time, boredom comes to mind. But I think boredom is made up by the human mind and is not part of the dimension of Creation. Again, it is getting used to thinking in a totally different way and dimension.

Today Mr. Keshe said, it was time to teach us another way to travel other than how the UFO's travel, which is through M and G fields, or MaGrav positioning. In this method we create the G field of the destination and their M field pulls us in. This way of pushing and pulling the fields is not used in transmutation. Instead we are going to ride on the M field "rivers" of the U. You ride one of these M field lines to where you want to go, and as they only flow in one direction, if you want to go in the reverse direction you have to jump onto another one going in the opposite way. "M field strength travel" will be the new way of travel, so we have to learn about the orders of magnitudes and how to switch between these field lines. The beauty with this type of travel our emotions connect to the field lines and we end up where our emotion finds satisfaction. The travel only takes a few seconds and we can never get lost in the U for thousands of years. Somehow we learn how to take our Soul inside a plasma sphere and through our emotion the field strength increases by orders of magnitudes. The STM travels the U through the emotion of connecting to other Souls. It's a kind of amalgamation of the Souls, but we'll find out more about that later.

Then there was a question about what the difference between the "M plasmatic packaging" versus MG fields in the matter state, and it seemed that it came out of the understanding of what we were learning in the 4 lessons on "Gravity, Inertia - Mass & Weight" we had some months ago. In these teachings we learned that the M and G field interactions are involved in both cases of Gravity and Weight. Remember that Weight happens when Gravity interacts with Inertia, and it's really a weaker field strength plasma which we call "matter." Mr. Keshe said he will go into detail next week and teach more about G fields. We got 4 lessons up to now, maybe we'll get a 5th lesson.

Another interesting thing is that I believe this question is coming from one of our Brazilian housewives who is diligently studying the technology and understanding it, way more than the genius professors brought in by a particular government to evaluate the KF technology. When the 80 year old expert in his field started to hear about Nano and Gans processes he immediately got emotional and rejected the technology saying, it's impossible and all this is fake. And he wouldn't even consider the evidence being put

before him, he had already made up his mind. This shows the beauty of what Mr. Keshe said, that we all will become plasma "professors" and we all are equal in the technology.

If we are feeling these new teachings are coming in little bits and pieces and it's hard to make sense of them don't worry. The teachings are in the process of gathering different background information, and then as we gain more and more knowledge everything will fit into place. It sounds like these new teachings will go on for some years to come. We are all being prepared for transmutation, but the first 25 people of the group of 200 will be personally trained by Mr. Keshe in a few months from now. But eventually we'll all get there. We'll be able to create our own physical shape and decide on the destiny of our STM and STP.

Other topics:

October 28th London Conference was discussed and dignitaries from government of UK will attend, as well as from the EU, BRICS, Russia, and possibly others;

A new technology for agriculture will soon be released - I am assuming it will be field based and not Gans based like the present one;

Keshe Foundation's focus in delivery of the T will be on Space Technology;

China heat wave due to fields created by pollution and perhaps other things.

Thank you for listening.
