

498th Knowledge Seekers Workshop Aug 10, 2023

(Quick Index 23 pp, Introduction, Topic Index, Proofing editing done ; Need to do; Key Phrases, Words) (Auto transcription from Elias)

Goal of material production to reach fields of Creator - jump on line going to Creator; Creator created out of His own fields; Make system to reach; Gans of Gans; Every Soul connected to Creator; Show T to humanity; Matter & Plasma both respected; Visualized fields of MaGrav & Gans - become part of; Elevated Soul of leaders works - Ukraine Church war; No guns in Space; Planet can disappear; Astral travel; Cannot formulate Plasma - core teaching; First Space reactors fly in Lab; Plasma & Current saturation - Parkinson's; Asteroid Belt made from fields - rings; Practice Soul; Soul working P asleep; CIRBU forming; China brings peace to Middle East; Arabs ruling Iran; America Gun & GMO policy ending;

Topic Index

Production of materials not goal - create fields of Soul of the Man (STM); Replicate fields Spectrum of universe (U); Goal - reach Creator; Jump on M field line to Creator; M field line of Earth goes to center - creator of Earth - absorb energies; Creator is created from His own Creation; Gans of Gans - field line to Creator - depends what you absorb; Closer you come - more enlightened - more to give; Make system to reach Creator; Servant to Mitra; Mitra not an entity - principle of interaction of fields of U - path of living - perfection; Soul connects with Creator; Every Soul has Common Denominator field line to Creator; Find strength build system within selves & outside a machine to reach; Get enlightened from finding single field; Creator Himself was created out of His own Creation - Book 1 - interaction of own fields leads to creation of Mass and Weight; Arrive instantly on M fields from North to South Pole; Can use fields of U and Unicose; Blind man in system see & through STM - take Chinese scientists hundreds years understand; Chinese saw particles rain in lab - can't believe - now use detectors; Invite world leaders to witness; Collaboration between Chinese & Iranian scientists - breakthrough beyond imagination - baffled; Two choices with unknown science - drown man with advancement then he is forced to learn - or wait long time to understand; Have to accept what witness; KS experienced in EU in Linz; Arrogance brings blindness - Servitude brings wisdom & understanding - comes through Soul & interaction of fields; Ordinary man only sees D of P; But wise man understands wisdom of Creation "sees" fields; Show don't need anything to live - connected to fields for life - not kill - purity of Mitra - Ethos of Creator; Next few weeks physically show T to humanity - change the course - Many will burn old science books - scientists deny past mistakes; Up to now only know matter state - with plasma show fields in motion; Difference between matter & plasma; Matter connected to Inertia fields of matter state - plasma connected to Inertia of plasma state - both exist in conjunction & collaboration within each other; Man physically exists but has Soul within him - aware of both dimensions; KS can get rid of dogmas of science then understand plasma; MaGrav best tool to understand fields of plasma; Passenger of Unicose - flick of finger; Try to visualize fields of Gans in front of you - then with fields of room & atmosphere; Observe how it interacts with your Soul;

Now teachings about connecting to fields; Creator is created out of own fields & creates with them; Make reactors without motor - field interactions; Paper- Creation of Motion in U - go back & read; Need to understand fields to survive in Space - heal cancer - create water etc.; KS flooded with water in EU in Linz - create more fields to elevate Soul; System to reach Creator - many walk away from P; Link up to fields become Passengers of U; Don't look for electricity in MaGrav but fields that create electricity - elevate Soul - become part of fields not outside them; Manchester show how to extend your Soul - practice for November to transmute; Give intense teachings - don't need airplane home; Understand fields - then manipulate them; Trials to transmute Chinese soldiers from one point to another; All become "soldiers of knowledge" - not easy have to start somewhere; Try to feel and connect to fields; Create light in palm of hands - but enlightenment; Try not to pretend - but understand reality of Creation; Teachings shorter now - but very deep - for you to understand;

Over next 2 years KF will change from original - but keep Thursday teaching; KS can show work with T protected against hooligans; Peace process will be long haul; Ukraine religious war between Vatican wanting gold of Russian Orthodox Church - phone call to end; Have to find peace within ourselves then on planet; Have to work to maintain peace and make habit; Iran not cross borders 300 years; Persian Empire example for peaceful world; In 500 years - no tools of war; Peace inside political & social structures; Offer alternative to war with Space development; Apollo missions did not carry sidearm - Space already peaceful place; KF expanding in ways hidden from public; KS and U Council wished for peace and got it; KS have a lot of power with intention; London police didn't carry guns - crime worse after started carrying guns; Things on Earth become obsolete; World peace already started; U Council began August 2 - setup in China - UFOs visit; Satisfy man's needs becomes peaceful - expansion of Soul; You elevated Soul of world leaders and got your wish; Ukraine will be end of Vatican - gay club child abusers; Planets only make up 5% of mass - cannot create Sun - other way around - can take fields of Sun and make new creations; Learn how attraction of atom begins process of creating Star - have to be able to maintain life you start; If fell in lower field strength area in galaxy - planets disappear in seconds - like turbulence at high altitude flight; Will show in tests later; Astral travel is not separation of P & STP but collaboration - but shamans on drugs can say anything; Long teaching on cannot make formulas with plasma - each plasma is unique created from time and place - cannot replicate; God doesn't measure things mix fields together see what you get; Everything is accidental & coincidental; Cannot write a formula for it - no two Gans's exactly the same - you have no control over it; How many Gans's in a drop of Gans; Maybe in future can count - but another problem is they each have different energy; Can create conditions with framework but cannot dictate framework; All in hands of Creator and Creation - Creation is an interaction of fields; Why are all plasmas in Creation spherical - God likes football - opportunists (plasmas create from conditions available); Impossible to formulate anything about dynamic plasmatic fields & rest; Russians made research about M fields Sun 1990s Paper - elusive fusion - nonsense - but good imagination; Each H has different field strengths depending on conditions; Cannot repeat it; Gans will have isotopes of Cu in it; First plasma flight Tehran University Laboratories - used about 300 radioactive sources from smoke detectors - he handled without protection - doesn't absorb

radiation; No formula - had to move sources and test each time - 2 out of 10 times worked how expected - with experience & deep understanding make judgment about plasma but cannot formulate it; Earth created without formula - by existing conditions - could say by accident or approximation; If God can't formulate how can man who has far less knowledge do it; But just because you can't formulate it doesn't mean it doesn't exist - Mr. Keshe through knowledge can have a good approximation about plasma creations; Once something can be repeated becomes a technology; Original 2 space reactor bigger one stationary and smaller one flies; Flew around lab hard to catch like baseball - never hit glass - but did hit ceiling; Waited for the fields of 2 reactors to interact - a little vibration in smaller one then just flew off; Small reactor first proper flying nuclear power generator system on Earth; Constant inspections by military personnel; Netanyahu falsely & purposely claimed it was nuclear bomb - to plan invasion with Trump; Proud of Iranian accomplishment - never crossed border with such a power in hands - only to defend territory; He is master in it - can't replicate fields; Bigger one is UFO - has reserve tank of elements - exploded - stopped - too dangerous; Need knowledge to keep it from flipping or reversing polarity like Sun; Current saturation worse than plasma saturation - in body causes Parkinson's; Scientists don't understand current saturation - disaster in space flight; New systems are different - no spherical balls; Big ball reactor like STM - small reactor like STP; Can make it manifest physically; Same as when Soul expands over STP - vision becomes blurred; Next cycle of space reactor Chinese & Iranians work together; T has leaped hundreds of years in just 15 years; New systems controlled by thoughts; Soul dictates change in physicality (P); Show systems in Macau conference; Systems need a wise man to see know how to use; If understand power of STM - achieved a lot; Asteroid belts are created out of the interaction of the fields together with Inertia - not planet explosion - can trap materials - maintain Inertia; When Soul interacts with STP and Inertia of environment creates body - same with asteroid belts - Inertia of Solar System - same as rings of Saturn; When go through transmutation when fields don't match can't see half the body - happened with Ali in Canada - hand became invisible; Each field interaction between two systems creates it's own belt or ring - acts like funnel - one is Soul - other a STP & Inertia of environment; Have faint belt around Earth (where see shooting stars); It's natural characteristic of spherical field interactions - adjust to become liquid or solid; In Paper on rings of Saturn; You all should have been able to answer this question; Newton was working with matter state of inertia - these formulas are correct for solid mass - because can measure; Understand difference between matter and Plasma state; Cannot ridicule what was achieved in matter state - brought us to today; Sooner we get away from science dogmas - sooner understand Creation; Better chance to replicate if use dry Gans and measure - but still each Gans has different field strength; Plasma is energy state - reduce strength becomes matter - matter is still an energy; Explanation about plasma compared to lover and love - can love exist without a lover; KS could remember Soul interactions day & night after Addiction Session - then lost it - have to keep practicing so that it become second nature; While snoring his Soul is working and he is conscious of it for many years - but P takes rest when needs; Fighting in dream means lost love - fighting to keep it; Iranians are king lovers; As scientist no one is above the other; Arabs are ruling Iran through Ayatollahs - most are Iraqis; Brought in others to kill to keep power; Saudis have gone back to Iranians after destroyed most advanced American base in Iraq 2020; Chinese came in brokered peaceful

development to secure oil & gas; CIBRU is beginning to form - Brazil signed agreement with China in April; "U" not anymore for US - but United Earth - share T; America at bottom of new Space T; American "Gun Policy" and GMO Policy of controlling nations by having to buy new seeds every year from America; GMO means seeds won't reproduce; New T removes this layer so can keep the other improvements but become free; Two aspects of control will finish soon - China become new breadbasket with KF T; KF agreements signed with China allow spreading of T to world; 5 to 10 years feed everyone on planet; In war Americans target civilian food supply - keep secret from Press; Plasma systems use headphones to feed nation in time of disaster; Hopefully Thursday teaching from Manchester - all KS be part of.

Introduction to 498 KSW - Single field line to Creator - Cannot Formulate and repeat a Plasma - First UFO from Earth

It was interesting to hear Mr. Keshe say that the real goal for the production of the materials from the fields of the universe (U) was to find the M field line to the Creator. And that every Soul in existence has a common denominator field line to the Creator. So my understanding was that, the M fields that come out of the North Pole go back into the South Pole and reach the center of the Soul of the planet. Likewise if we can discover which one, then we can jump on one of these M field lines and it will take us to the center of the Soul of the Creator. It's our job to find that line, and then it will depend on how much we can absorb, as to how close we can come to the Creator, but that also means how enlightened we'll become, which in turn means we'll have more to give.

So how do we find that single field to the Creator? If the Soul of the Man (STM) has a direct line to the Creator it must be somewhere connected with our Soul. Then perhaps it means how much love for the Creator we can feel in ourselves, so that we manifest the attitude of serving the others. In India, they call it "Seva" serving others. Mr. Keshe calls it servitude, and once he said, he is the servant of Mitra. After many years of studying the different spiritual paths on this planet, I found that the deepest ones always come back to "serving others." First we go through the journey of self-discovery, which usually starts by learning different viewpoints of life, such as attending spiritual teachings and reading books. If we are lucky we come to an understanding that everybody is pointing to the same thing, that the essence of our being is inside us and we have to have direct experience of it. This is where we start to do spiritual practices, which means applying the ideas we learned to our own life and discovering who and what we really are. Finally when we start to become more and more enlightened, our life naturally becomes one of serving others, while at the same time continuing to learn more and share more. In the end "all roads lead to Rome." The essence of all the true spiritual paths are the same. And the last stage is when we merge back into our Source. Mr. Keshe once said, that the Creator is the one who has the knowledge and has experienced all of the planets and existences in the Unicose.

I am sure the scientists got a big surprise when they heard that the goal of producing materials was to find the Creator. Especially since many don't believe in a Creator. But then the problem is, they start to doubt and deny what they themselves have experienced,

because it doesn't fit with their expectations. To remedy this he said we'll put field detectors and cameras in the lab so they will have to face the true reality of the Plasma science. As the knowledge deepens then we'll make a machine that can increase our field strength and help us get enlightened for finding the single field that goes to the Creator.

The Creator is created out of His own Creation. If you remember the early video of KF showing the creation of a plasma. It shows 2 separate fields interacting to start a plasma. Later he surprised us by saying that a single field can turn back and interact with itself to create a plasma. After we get born as a Soul at the point of "death," then we too can interact with our own fields together with the Inertia of the new place we go to, to create a new life cycle. The STM interacts with the STP and together with the Inertia of the Earth creates our body. But we don't have to wait to become a Soul, we can also create life now in the physical dimension (D), but we need to learn how to convert matter to energy or a plasma. "Oh, isn't this also the process of production of materials!" This is what the sperm and egg do in the womb of the mother. This is how the rings of Saturn and the "cosmic dust" around the planets are formed, that some say are the remnants of an exploded planet. But this is due to not understanding how Creation works. We just have been talking about the same basic pattern over and over again. Our science sees them all as different processes, while plasma science knows that it is the essence of the energy that is working in all of them.

He was very clear today that we don't ridicule what science has achieved up to now, because those formulas work in solid state matter where things are measurable. For life to be a whole process we have to respect and understand both the matter and plasma states and know how to work with and understand each one. In this way, we'll be able to give expression to our love by manifesting it in matter state. But we won't be trapped by it and can journey through eternity manifesting different forms of the fields of the Creator, which actually is the original M field. Life is nothing but the joy and love of the interaction of the fields. And when we were children playing with magnets, somewhere inside us we knew we were feeling our own nature.

This leads into a deeper discussion about how the plasma works, that until now Mr. Keshe only inferred about. My understanding from today's teaching is that the plasma is spontaneous and living, and is here and now. You cannot put it into a formula. Of course, you can try, but there is no guarantee that it will work that way. In all these years of teaching I always wondered, how are we going to make the plasma do what we want it to do. When you talk to people about plasma the only thing they are concerned with is, if they can get it to do what they want. Can it take my cancer away? Can it give me free energy? This is the matter state way of thinking, and it comes out of our conditioning and upbringing, and that basically, we are all trying to get what we want for ourselves. We are not talking here about right or wrong, good or bad, but rather what the conditions we have to work with are, if we want to understand plasma. If we recognize how we are programmed, then we can become open and want to change, and this will bring in the new dimension at the level of society.

When the plasma is created it starts out either from a single field that interacts with itself, or two fields interacting with each other, which then continually starts interacting with all the fields around it. And in some way it's connected to everything in the U. When we work with plasma we try to control just the major field interactions to manipulate it the way we want to. Another factor is that plasma is a Soul with intelligence and emotion. With all these conditions occurring at the same time, it is no wonder that you cannot formulate it and repeat it. This was hammered in today's teaching again and again, that we cannot formulate the plasma using mathematics. I am sure this is very upsetting to many scientists because mathematical formulas are the backbone of matter state science, and when they can't understand something they just say, "it's a complicated mathematical formula."

Having said that, it doesn't mean you cannot master the plasma and work with it, as Mr. Keshe has done for most of his life. We have to gain the knowledge and be aware of all the conditions that can influence plasma and then we'll receive its benefits. So this means the Earth was pretty much an accident of Creation. And now the Creator had to come here to clean up this accident, which is the killing, but at the same time to keep the human's unique ability to love, and spread that around the U.

Mr. Keshe once asked us why are all plasmas spherical? Then he made the joke that the Creator loves football. And remember he also loves football. But as to why, the only thing I can think of is that a sphere has equal access to all the dimensions around it. There are no square corners to block it off. And there is no beginning and no end in a sphere. As to being opportunistic, I take it to mean that there is no thought about right or wrong, the plasma flows with the fields and then however it manifests we have to accept. And then we can use intelligence to relieve the suffering. Like what has happened on Earth. Opportunistically the fields created it, and we have been suffering for it ever since, and now the intelligence and love part of the plasma have come to correct the situation here with the killing.

It's like mixing paint colors. You can never get exactly the same color again, but you get it close enough to the original color that you don't notice the difference, and we assume that it is the same color. There is a huge lesson for life here. Why do we think that we need to keep something forever. It's a misunderstanding of life, because we never knew we have a Soul that is already connected to the Essence of Everything. This leads us to attach ourselves to physicality, which is constantly changing and dissolving because the field conditions are always interacting and changing. We are living in an ocean of interactions, where each one is unique and can't be repeated. They say "be here and now," but actually we have no choice, we are here and now. It's the mind that has made up all the concepts, and it's our belief in them, that makes them real. I think we feed them with the energy of our Soul. So this is why we cannot make a formula with plasma.

There is a beautiful historical account of the first Nuclear Space Flight Generator on Earth that was done in Tehran University in 2008. As we all know the Establishment doesn't like to see the true space flight, instead they like spending billions of our money on the "fake" ones, so they can keep their positions. I think this is why Mr. Keshe used

the radioactive sources from smoke detectors, because everybody has them in their houses, so they won't be afraid of them. Nevertheless, Netanyahu still lied about this reactor as a nuclear bomb. It was an amazing breakthrough in the science of man, and the world Press kept it from us. The little ball reactor lined with smoke detector patches was flying all around the lab, but careful not to hit glass windows and fly away. (Would that be considered intelligence?) Mr. Keshe doesn't absorb radioactivity so he was constantly repositioning the radioactive sources in the small reactor and testing each time how the fields would flow. As he taught us today, it cannot be formulated, so he had to go through this laborious task of experimenting with the plasma. All that hard work, he did on our account, because obviously we are not going to fly with these kind of reactors, it's too dangerous. Even the bottom reserve tank of the bigger ball reactor exploded. And these reactors can reverse polarity like the Earth and Sun do. These experiments were just to show man, that the plasma is real and you can fly without burning fuel. Even though these first flights were fuel based plasma flights, because the reserve tank of elements was constantly being converted into plasma for the flight.

A KS said that after the Addiction session he was living in the Soul both during the day and at night. Remember, dream state is really the time when we are living in the Soul dimension. But then after some time he lost it. Mr. Keshe replied, like anything in life we have to keep on practicing it until it becomes our second nature. This gives us a lot of encouragement that KS are able to experience the Soul in a deeper and real way, because we all suffer from the conditioning that the Soul is not real. The Soul is not imagination, but we can use imagination to practice making it real. This is what he meant when he said, try to visualize how the fields flow in a bottle of Gans sitting in front of you and become part of it. We can do the same with our MaGrav. In fact this is the best tool, because there are so many field interactions going on. One of the problems is that we are expecting to have a result right now. But it takes time for the fields to build up and for all the Souls to agree on the new position.

He said, that we elevated the Soul of the world leaders and wished for peace and we have achieved it. But you might say, yes, but nobody is announcing it. He already explained about the last war in Ukraine, that there may be some small skirmishes. This is the difficulty when working with plasma, you have to have a little faith and understanding about how things work, and then you create a feeling of certainty that what you are doing is part of the Ethos and correct living. Then we just move ahead with all the love, and joy and positive intention, knowing that it is reaching the goal, but not to constantly look for a result. Looking for a result stops the flows, and is a kind of egoism. We will see the signs of change, they will be brought to us. Didn't Brazil just sign an agreement with China for Space technology? But how come in the article they mentioned agriculture? Has anyone ever heard of NASA trying to grow corn on the Moon. No, they cannot tell us the truth, but at the same time they cannot keep the truth from us, our Souls know everything. CIBRU is being formed without people understanding it. Mr. Keshe came up with CIBRU years ago and now it is being formed. It didn't matter if nobody believed it. He knew it in his Soul, and he kept with it. This is how we have to be, certain of who we are and what we want, and that it is for the good of all. Then we keep feeding it with love and energy and watch it grow. But no expectations, and it's amazing how the Souls start

to gather and create. Listen carefully to this workshop and you'll feel how close we are coming to being our Soul. Many KS are getting it.

All of the KS can be part of the upcoming conferences in England and Beijing through the Soul, even if we can't physically be there. This is a huge chance for massive changes to take place across this planet. Hopefully, all of us will understand our responsibilities as KS and members of planet Earth and make the effort. Everything is set for huge changes if only we'll all try and participate.

If we think about it, space is already demilitarized and a peaceful place. Because the Apollo astronauts didn't think to carry a sidearm in their spacesuit in case they wanted to shoot an alien on the Moon. Now we have to bring that peace back to Earth. One of the ways we are doing that is through spreading the technology. We are one step closer to peace because the Chinese have stepped in and replaced the "Gun Policy" of America in the Middle East with a peace policy that brings economic development to the countries involved. Another step will happen when China replaces the "GMO Policy" of America, with the policy that no child should go to sleep hungry. Most people don't know that GMO means that you control other countries food supply by genetically engineering the seeds to not be able to reproduce. Then every year the farmers have to buy seeds from America. Use of the T will reverse this and China has signed agreements with KF to share the T throughout the world. We are closer to world peace than ever before in our history. So KS have a huge power to make a change, but we have to love ourselves enough to use it for good. There is a lot more to enjoy in this workshop.

Other Topics:

Trials to transmute Chinese soldiers from one place to another - we all become "soldiers of knowledge."

Ukraine war is of Churches - Vatican trying to take gold of Russian Orthodox Church - end war with one phone call - will be the end of Vatican (and maybe the beginning of the "true" Christianity without religion).

Thank you for listening.

Quick Index

(In the teachings over the last couple of weeks we have touched on something very important, and today we'll be building on this knowledge, which has been the basis of about the past 4 weeks. One of the most important points of our work has been the production of materials from the fields. In cooperation with the Chinese military we have shown the production of materials, of organics, and elements, and it doesn't matter in what shape or form. Besides that what is the ultimate target? Is it just to make Calcium, Copper, Zinc and whatever? Or, is the ultimate goal of all this work to understand how to make the fields of the Soul of the Man (STM), at the strength of (how it functions)?

(We have replicated the energies needed to produce Matter. The ultimate goal is to be able to replicate the energies to produce the spectrum of the fields of the Universe (U). And one of these field strengths leads us to the Creator. This is our target).

(All this is not just to show that we can make elements and gases, rather it's a stepping stone towards the ultimate goal, which is to take us to the Creator. We want to create a condition that allows us to jump onto (one of these field) lines that will connect our Soul to go in the direction and dimension (D) of the Soul of the Creator).

(We are gradually learning step by step. We came in with nothing. Mankind only had a stick in his hands and lived in caves. We didn't even know what fire was, or understand that it was a conversion of energy. We learned step by step about the metals and then mastered them and made alloys. Then we made chemicals and became nuclear physicists. Now we have become Plasma Physics, and then we'll become "Creator Physicist." We'll learn how to find a line to our Creator. This is the ultimate goal and what all the Creation is about, that is to become "part and parcel" of the Creation).

(The magnetic (M) fields of the Earth start from the North Pole and it goes back around to the South, and as the pictures show it ends up in the center. That center of the Earth is the "creator." These M fields show how you can reach the center and become part of it. It creates its atmosphere and its dimension (D) of Creation through interaction with the others. The ultimate goal is to be able to jump on one of these M field lines (and reach the center). Through the rotation and movement in the direction of the attraction (towards the center), we become part of and touch the Soul of our Creator within. (By getting into these M field lines we become part of (that creation))).

(When a M field goes through the Earth it touches what's inside the Earth, in its center, and it absorbs energies from it. The North Pole of the Sun or the Earth is always slightly warmer than the South Poles, because it gathers energy there. It gathers M fields from the center and somehow becomes part of it. This is the ultimate goal and the whole reason for the teaching. It's the principle of the whole teachings).

(Does it come to the point that we can create fields through the interaction of their fields with the fields of our Soul? (When we get into the M field it puts us on its path that we become part of the hemisphere). We become part of the rotation and the atmosphere and we create the D of manifestation of the existence of the Creator. Now you understand what it means, "I am the beginning, and the end." "I'm the Creator and I'm created from (my own) creation).

(How do we make a system to fulfill our ultimate goal? I taught you a long time ago about making "Gans's of Gans's." The interaction of the (fields of) the "Gans's of the Gans's" allows you to create a field strength to reach the right position to get on that M field line, in the loop that goes to the Creator. How close you get to it depends on the field strength you can absorb. The closer you become, the more enlightened you become, and the more you have to give).

(The fields of the Earth that are 50 kilometers up are cold. The fields which are (nearer to the surface) through interaction with other fields, and the Inertia, create the conditions for life and manifestation. This is all it is. We are somewhere 500,000 kilometers away from the center (??), (and if we can jump into the M fields that go to the inner circles, and if we get close enough to the Earth and the Soul of the Creator (??), then we can manifest (a creation)). "We show the Creation and the Creator through his Creation."

(In the coming time we'll endeavor to make this system to reach the Creator. We are working on a system that will create the fields of the Creator. Then through interaction with the STM, becomes the will of the man. "I am in command, through the interaction of the fields of my Soul, to create my wishes, in the D of the wishes of Mitra." We are all servants to her, and nothing else. Through serving her, we serve the Creator, and nothing else. Mitra is not a creation, nor an entity, rather it's the "principle of interaction of the fields of the U." It's a path of living. It's the way you interact to lead to creation of perfection).

(Now you understand that all of these teachings are heading to the direction of the Creator. We went from the Nano to the Gans's, to the MaGrav systems, and the rest, but it all was to gradually bring you to the point of being able to create the fields of the Creation. Then you become "the beginning and the end." It depends on where you jump into the M fields circle, on the North Pole as the M fields come out, or on the South Pole where the G fields go in. But the "Pole" is your Soul, and the connection of you with the Creator).

(In the essence of the creation of every Soul, it has a common denominator field line with the Source or the Creator. There is Soul or no life in the U that does not have a direct connection to the Soul of the Creator. It's our job to find its strength and to build systems within ourselves, and outside (to reach it). Man is genius in building machines, he can replicate and create that field. By in coming in touch with that single field, and by connecting to it we'll get enlightened. Then we'll have the whole knowledge of the Creation and we become part of the Creator. The Creator himself was created out of His own creation. It's like what you read in Book 1. It's the story of Creation and the interaction of the fields, which leads to Mass and Weight. They are created out of their own interactions).

(Where are we going and how do we reach it? By the creation of some 30 to 40 elements, and organic elements in the past few weeks, we have shown that we are in position and have the power to do it. KF in collaboration with the Chinese military will now endeavor to take the next step (towards this) in the coming days. We will endeavor to create a new condition and show (its) existence. That is we'll actually show how the M fields starts and where we enter and exit the fields, to get from the North Pole to the South Pole. It doesn't take long if you do it with a rocket, but if you drive, swim, and everything else it will take you a few weeks. However, if you go with the M fields of the Earth you arrive instantly at the South Pole from the North Pole).

(This is using the fields of the Earth. What about if we use the fields of the U, which already interact with the fields of the Earth, and we jump on them? And then what about if we get on the fields of the Unicoise, which is within the structure of our U? All these fields comes from the fields of the existence of the Creator. What about if we jump on them? It's not impossible. It's only the lack of knowledge that prevents us from it. It's not a dream, it's the reality, but we have not understood the principle. And now we are setting out in that direction (to discover it)).

(In the coming days and weeks we'll show a new dimension, a new structure, and a new way to think, interact, and to feed (ourselves). Then we just have to walk within the fields of the system and we'll receive all we need, whether it's medicine, food, or energy. It will come through the interaction of the fields (of the system) with the fields of the Creator. We are entering a new D in science and T. If we put a blind man (into) the system, then he will walk out and see not only the man's P and the Earth, but also the whole of Creation).

(The exploration of science and T with the Chinese military in the coming days will open a new D in the world of science, that even the scientists will not be able to understand. It will take them hundreds of years to understand how we did it and how we will developed this position and condition. We can walk a man blind out of his blindness, and he will not only see with his physical eyes, but the eyes of the STM will be opened to the world of Creation).

(We saw the beginning structure of this process some weeks ago when the first Chinese military officers walked into the lab and saw the fields. They saw everything and could not believe it. But I could not tell them what's in there, because it was beyond their understanding. These people are blind to the knowledge. But now we'll put the cameras, field detectors, and everything else possible in there. It's for them to understand how we can find the Soul, by observing the fields interactions. Then we'll invite the world leaders to see the world of Creation, as it's created).

(In the next few weeks we'll setup a collaboration with the Iranian government, and Iranian and Chinese scientists will breakthrough into a new world of science, beyond man's imagination. What we showed the military and the scientists have baffled them).

(We have two choices with this unknown science. We can drag you along bit by bit, or we can literally drown you in it. And I think drowning the man will be better, because then he will learn to swim. Whereas if we drag him along, he will only hope that one day he'll get to the "water." Understanding the science & T and the Knowledge of Creation will be at the reach of every man. And it won't need any Prophet or Holy Books. It only needs that you are in the position and have the clarity of understanding. You have to be in the position to accept, see, and analyze it, but not to judge it (with preconceived ideas)).

(It's like when you came to Linz, we said we are not there to judge you. Instead we accepted what you saw. Some said they saw a mermaid, others felt the Soul of the Christ, and others went on the Moon and touched the stones. And some said they didn't see

anything, they came in blind and went out blind. It's the arrogance that brings blindness. And servitude brings wisdom and understanding. This comes through the Soul and the interaction of the fields. An ordinary man only sees everything in the D of physicality. But a wise man understands the wisdom of Creation and sees the fields).

(I'm sure we'll get collaboration in the coming days between our team and the Chinese military to open and show what we have discovered to bring in a new D in the world of the science and T. We can show that we don't need to produce anything to live, and once we connect to it, we are connected for life. Then we shall not kill, as we are receiving everything we need. We will live through the D of the purity of Mitra and the "Ethos of Creation" in all 3 dimensions of the essence of the creation of Mitra).

(Maybe now or in the next few weeks we'll change the course of humanity by physically showing the T to humanity. Many of you will burn your science books, and many scientists will deny the existence of the past. But the plasma has to be understood and we'll show the D of the fields in motion. Because all we have dealt with up to now has been the matter state).

(There is a difference between the two. The matter is connected to the Inertia of the fields of the matter state, whereas the plasma is connected to the Inertia of the plasma state, but both exist in conjunction and in collaboration within each other. Man exists and has the Soul within him, so he is aware of both dimensions. It's up to you Knowledge Seekers (KS) to understand the difference and cross that line of understanding and then get rid of your dogmas, and what you've been told about the matter state. You have to come to terms with yourself in how you hold onto your beliefs and treasure them and keep them. After you come to this realization then try to understand the world of plasma inside the world of Creation).

(The first and best tool I gave you was the MaGrav unit. And I keep on telling you and keep trying to hammer it in, but you keep saying, "It only gives me 30% reduction." No. Try to see what fields it creates and what their potentials are to do something with them, and what their dimensions are. And then take the next step. Maybe in the coming time, you as KS will become the first "Passengers of the Unicose," rather than just the Universe. It doesn't take much. It's just a "flick of the finger." It depends how you "flick that finger" and how it ends up, and how that coil rotates, and how it lands).

Try to visualize the interaction of the fields in a bottle of Gans in front of you. To the fields of a dynamic coil in front of you. Then try to visualize the existence and interaction of the fields of the Gans's in front of you, with the fields of the room and then the atmosphere of the Earth. Then think about whether or not you have missed something. Were you too busy watching the MaGrav fields, that you forgot those fields are already interacting with your Soul. Then you understand the wisdom of knowledge. As usual, when you are too physical, you forget about the reality of the Creation).

(From now on the teachings are not so much about making things, but rather to understand how to connect to the fields. The Creator did not make a machine to make

fields. He Himself was created out of them, and He creates from them. Now you're in the same position. Try to understand how you can make reactors without motors, and only with the interactions of the fields. I released a paper about this years ago called, "The Creation of the Motion in the Universe," but no one looked at it. Maybe, it's time to go and back to read and understand it. Then you might get enlightened as to how man can create the condition for creating motion. It's called, "motors without engines," and without burning fuel. You don't have the donkey or something else pulling or pushing it).

(In the process of understanding and being part of the totality man needs to understand the interaction of the fields for the completion of the course. For example, how and which fields will he use to heal his cancer, or to satisfy his hunger, or to create water, so that he (can survive in Space). A few of you who were in the Linz EU said you were experiencing being flooded with water. You were producing so much that you were drowning in it. If you push it a step further, you should also be able to produce so many fields, that you can elevate your Soul, or reach enlightenment. But as you are so materialistic, having that water was more important than actually elevating your own Soul).

(In the coming time, as we develop systems to create the ultimate fields of the Creator, many of you will walk away from physical life. Many of you from around the world will link up to the (M field) line and become "Passenger of the U." Many of you will come to understand that this physical life is not worth it, as it stops the pleasure of enjoying the D of the fields of the U. We were happy to live in a room in the village, then we came to town and made apartments and villas to enjoy the city. Now we'll take our Souls for a trip through the U. But we have to understand how to do it, what to give and what to take, so that we can make it back home again).

(Try to envisage the fields and not the matter state. Don't look for electricity in your MaGravs, instead look at how the fields interact to create that electricity. I have asked you many times to look at the fields of the MaGrav and understand them. Try a new way to interact with your MaGrav and elevate your Soul. Try to understand the fields and become part of them, and not as an outsider observing them).

(In the upcoming meeting in Manchester in the next couple of weeks we'll start this process to show many of you how to reach this point and how to extend your Soul. Then you'll have some time until November to practice it as your "homework." We'll see how many of you manage to reach that level of understanding of how to create the fields. That you can actually do it, and it's not something you read from the books of history).

(In the teaching part of the Manchester conference many of you will come to meet, feel, and understand your Soul. And you'll be able to "cross the line" and understand the Totality of the Creation. My only wish is, that by the time we finish on Friday, that those of you who understood will not have to take an airplane back home, as you will already be home. Home is not going back to Mexico, Canada, or somewhere else. Home is finding the path to the Creator. You do it for yourself, and by yourself through

understanding the interaction of the fields, and being able to manipulate the fields of Creation).

(I hope many of you will come to understand more in a much shorter time. In the upcoming trials with the Chinese military we'll try to transmute their military forces from one point to another and this will bring in a new dimension of life, and for science and T. Then we'll become "soldiers of knowledge." It will not be an easy task. We have no choice, but to start somewhere and then build on it. We have to take the next step to the next understanding, so that we can accomplish what all of us have been waiting and wishing for).

(Try to connect to the fields and understand the Totality of the Creation. Try to feel the fields, and understand how they operate within you. Many years ago I explained to you, that you can hold your hands out and create light in your palms. I think the knowledge has reached the point where some of you can do this, if you have understood the work. You can at least make an attempt to do it. It will not be the light in the palm of our hands that we are looking for. It will be the light of enlightenment, the light of understanding, and the light in a way, as knowledge. It's not the physical light to be absorbed).

(New systems and technologies will emerge from the KF in the coming months, and God knows years. And we'll still be making Gans's and whatever. It's like a school that starts from the first grade to the twelfth, which grade you are in depends how much you have understood. Try to comprehend and feel the fields. Try not to pretend, but understand the reality of the Creation).

(The teachings are shorter now, but very deep, it's for you to understand them).

End of Quick Index Part 1 - 498 KSW August 10 2023

(We are still closing out the stock of the original KF products in Austria. Gradually in the next 6 to 2 months we'll become part of a bigger structure and you will see many more products through the new joint venture with the Chinese).

(We are striving to have a very colorful and exhilarating experience for the November world ambassadors meeting in London. Some of them might join us from the beginning of the day, rather than just the evening session. And we have invited some of the world leaders, and they understand the position we are in (now). It's much easier to create a condition and we'll push the advantages of this position to be able to share the new Space T and new understanding).

(Over the next two years the way you as KS knew the KF will (change drastically). I think only these Thursday teachings will be the remnant of the original work of the greater KF. Everything will move to a different scale. But, we'll keep the Thursday teaching as part of the totality of the teachings. It's not an easy job as we are growing and becoming part of a larger international organization. Please bear with us, as we still will make mistakes, some good and some bad ones, but overall we should be able to move to

a new D and direction. We'll see where and how we will come out of this position in next 5 to 10 years. This is the 498th KSW and these have been going on non-stop, every Thursday for about 10 years. We've always been here to share knowledge and this is a huge accomplishment).

(Now that we are backed and working with a strong nation and structure like China, we will go back to a lot of things that we had to leave behind before, because of the intimidation by the German groups and the hooligans in Belgium, and the rest of it. We will organize ourselves so that no one can touch the Knowledge Seekers. And we'll go back to open sharing of the T. You'll be able to come forward and show your products, and your knowledge and intellect. You'll be able to add to the knowledge of others, without getting intimidated by certain groups. We'll bring in national security forces to protect the KS to be able to work freely).

(It's time for us to move on and change, as a lot of us are working hard to bring that change forward. Now we have people who understand what we are doing and the changes to come, and they are here to support us and give a helping hand for humanity to move forward. It doesn't matter what name the knowledge is in, or whatever).

(Join us in Manchester, or in November in London, and then hopefully we'll start seeing a new D in understanding, and move away from this "Gans production" and everything else).

Q: (This is a KS from Germany who has been on before, and he has a different kind of interaction with Mr. Keshe. He calls him Your Excellency. He says, I opened the planet at 6 pm. I want to thank all who gave me this power to do it. And the only two things I saw was that the people calmed down, they don't walk that stressed like before. And all the paintings on the cars and walls and stuff got like they were sold yesterday. That was these two things I saw. But I guess there are a lot of more things which happened during that opening).

So my question to you Mr. Keshe is, what else happened? Because I think this was the starting of the peace process, or the initiation of the peace process globally?

K- I don't understand your question, I don't understand what you explained.

(The peace process is a long, long, long haul (down the road and lots of work). We as the human race have battled and fought (for thousands of years), and we still see some skirmishes of fighting. We know that peace on this planet can exist, but we have to establish that peace within ourselves first. We've seen a huge leap towards peace compared to 10 years ago. Now we have more or less just one war going on in Ukraine. This is a war of two different Christian sects fighting each other and can be stopped with the "flick of a finger." It's nothing but a religious war between the Catholic and Russian Orthodox Churches. Otherwise, if you look at the other areas, it is peaceful. The Middle East is peaceful and so is the far East. We already had Vietnam, other skirmishes in the far East, Japan, and the rest. All these wars are gone now. This is last war between the

Christians in Ukraine and soon it will come to an end. Then we'll see a permanent peace (on the planet). But some might try a few skirmishes).

(We have to maintain the momentum of peace, so that the man does not go back to war. The peace can be broken very easily with just one trigger point. (Therefore, we have to change the entire position to reach the norm that war is no longer accepted by mankind). It's doable and it's achievable. First we have to finish with this animosity between the two Churches, where one wants to take the gold from the other. Then we will see a long term peace on Earth. But we have to push for it. We have to give the hope that the change can come. We have to take the next step to permanent peace so we don't go back to the habit of wars. It's just a habit).

(I'm proud to be from the land of Iran. The last 300 years has been one of our glorious times in that we have not crossed our borders to make war. We have matured a little bit. We've seen the Islamic government of the present time, but half of them are not Iranian. The first 20 years of the present parliament half of the members have been Iraqis. Our leaders are not Iranian. The first cycle does not carry a single drop of Iranian blood).

(As Iranian we don't see any reason for war. If you go back to the time of the Persian Empire during the reign of Kurus (Cyrus the Great) and Darius, they expanded Iran to be the largest empire in the world at that time, but they didn't conquer the other nations. Instead they invited them to join their empire. It was a peaceful time). (In fact the Bible refers to Cyrus as a Messiah, but scholars and Church people never wanted to explain why).

(During later and in-between times we got arrogant leaders who wanted to show they have more "testosterone" than the others, and they made wars. Now for 300 years we have kept our armies within our borders. Can humanity say the same for itself, that no bullet has been fired for 300 years? Not yet. We expect, that in 500 years time we won't have factories to produce tools of killing. The change will come gradually).

Q: So it's nice to know that the people who invented the firepower, that is the Chinese are now turning into a peace state. They will be the first ones.

K- Either way we have to ingrain peace within ourselves, within our nations, and within our (social and political) structures. I explained this to some military people a few times, that at this point we have 2 choices. We can build more advanced weapons that are beyond what the other nations have, so they'll be afraid to attack. Or we just don't make weapons anymore and keep (what we have). We have been analyzing military data in a political dimension. China has 2.4 million soldiers or people under arms, some countries that are not very far away have only 16,000 soldiers. Then we can ask ourselves, do we need soldiers? Because the 2.4 million can just walk over the 16 thousand soldiers like ants).

(Think about what nations are spending on defense? Now we can put a "carrot" out of developing technologies and switch over from military to Space development. We can

open the Space, but without wars. There can be no wars in Space. The politics of Space has to change so that we go there as a peaceful planet).

(When I was thinking of the Apollo missions to the Moon, where we saw this Mr. Armstrong who was supposedly walking on the Moon. So I once asked the Americans this question and I'll put it to you maybe for the first time. Did he carry a sidearm in his spacesuit, just in case he encountered somebody on the Moon he would want to shoot). (He didn't carry a gun).

(This is the principle we have to look at. The Space is already peaceful. None of the people going to Space have yet thought they needed to carry a gun). So are we going to say goodbye to killing?)

Q: Yes, I guess through the next 5 to 10 years we are saying goodbye.

K- (Yes, but we have to watch and see. And we also have to offer an alternative. We have to bring the conditions for peace. KF is expanding in a very different way. You've just seen the "tip of the iceberg" in what is being done. Even people inside the KF, most of them don't know what is happening. But if you comprehend what is going on, in the next 5 or 10 years, will we need to eat? This is what have we been introducing to you in the Monthly Flight sessions?) (We will be presenting our alternatives in the upcoming Ambassadorial Meeting in London to the governments of the world).

(Many of you prayed, made your intentions and sprayed Gans water around your cities, and the Universal Council members prayed and wished for peace. Now you got the peace, except for the little job in Ukraine, your wishes have been answered. All of it. But think about why didn't it happen over the 30 years when all the peace marching was going on in the streets around the world and everything else? Now you understand that the Soul of you as Knowledge Seekers has a (huge) power. It doesn't matter how you turn it around. This brings us to a new point of what we can we offer our governments, leaders, and our nationals, that we do not need to carry a sidearm in Space. This would be a breakthrough for all of us).

(Years ago I asked the NASA people if there were any guns on the Apollo mission? They said, "why, who would you shoot there?" I said, "why do you lot keep on talking about demilitarizing the space?" (Space is not militarized as it is, and you didn't take a gun with you). Space is already demilitarized. Or do you want to test fire a gun and see how far the bullet will go in the open space of the Moon. Will we shoot the aliens if we see them? When it comes to Space the idea of weapons is automatically lost. Our space leaders, scientists, and astronauts don't consider it necessary. Can we make this a habit of the man and bring the change. But we have to offer a valid alternative).

(In 1973 I went to England for the first time and was shocked that the police officers didn't carry guns. In Iran, I was brought up near an army camp and we saw soldiers and guns in different shapes and sizes. We had Americans soldiers as our neighbors and there were guns everywhere. It was a strange feeling in London to see police officers without

guns. There was a comfort zone with it. A few years later the police started carrying guns, because they said the streets had become too dangerous. I told them you make it more dangerous by carrying guns. To me it was a nation going backwards. Now (the crime in) London is worse than Holland).

(Not only do we have to make Space a place of no war, but also do the same on Earth. To do this we have to create and deliver a viable alternative. That viable alternative is to teach everybody about their Soul. Then they'll understand they don't need the cars, the financial world, and the rest of it. We have not yet managed to open a bank on the Moon).

(A lot of things we created on Earth will automatically become obsolete in Space, and when it comes back to the Earth will automatically make it obsolete on Earth. We have to go through the transition and keep the options and T open. So, we have already started the world peace).

(We started the Universal Council on the 2nd of August just a few years ago. But it was actually when we were in China. It was setup and broadcast from China in South China Sea. China has been the birth place of the whole process of the new cycle. Working with China is not new. At midnight on the day we started the UC we saw a massive UFO with lights and everything over the buildings we were staying in. Because it's a universal knowledge and universal desire of the man. We see the UFO's wherever we go to bring the essence of peace. Space is a peaceful place and by taking man to Space and bringing him back to Earth, he'll become peaceful).

(To do this we have to satisfy his hunger, his health conditions, and his feelings of being secure on this planet. Then we will move to peaceful Souls, peaceful conditions, and so on. Man has only to learn he can travel with D of the Soul, and he can expand the Soul to get rid of his illnesses. He can also expand his Soul to get the energies he needs. Then will he see himself slaving for 8,000 days behind a desk to get something to eat. So spend your time gradually developing the conditions for peace within yourself, and then move through your neighbors).

In a way, we have started the world peace. (We started years ago when we elevated the Soul of the world leaders, and look at the situation today. Even Ukraine is resolvable with one telephone call, but nobody is yet prepared to make that call. They have to tell the Vatican to "pack their bags and go." Then we will all be at peace. As I said once if the Swiss guards and the priests (would keep their things with each other), which is their job, then most of the world will be at peace. They are a bunch of "gay guys creating fun amongst themselves" but it has created a mess for the others. This is the position we are in (with the Vatican). They are the biggest gay club in the world, and a bunch of child abusers. Now they are trying to take over the biggest Church in the world and the Russians are not letting them. Soon or later it will be resolved, but it will be the end of the Vatican. You'll see and you'll understand and we'll see the end of it.

Q: No more fairy tales.

K- No, this is reality. I lived in Italy, you see them. How many of Swiss guards you see walking a straight?

Q: (All the planets orbit the Sun, and every planet has the Sun as the same center).

K- You mean in our solar system?

Q: Is the Sun the result of the plasmas produced by each planet? Is it possible to reproduce the Sun in our world (in a miniature size)?

K- (The total mass of all the planetary systems within our Solar system is about 5% or less, and it is in the same ratio as we see in the U. If you put the total mass of all the planets, moons, cosmic dust, and everything else together it's not more than 5% of the total mass of the solar system and the Sun. So even though we see the planetary system moving around with different sizes, that mass is irrelevant. It's the fields which dictates their position, speed, and the rest of it. But their existence has certain control over the Sun, but they do not create the Sun. We are the containment of (the Sun), but not the creator of it).

(The gravitational pull and strength of the fields of the mother is too heavy. The love is too strong. So we have not made the Sun, but we are part of it (through the energies). However, we can create another cycle with it. Not necessarily within the Sun, but outside it. This is why Earth is a nursery for Souls. We're creating those little "dusts," called the STM. In the future these Souls will become stars).

(The totality of the structure of the matter state of the solar system has the capability to create another star, without a doubt. But first you have to create a condition for it to change from the matter to the plasma state. You have to observe and understand how it works, so that it can lead to creation of something. We can start the process of attraction with one atom that is at a high energy, and it will attract another atom and start the cycle. It's like an egg and sperm).

(Our assumptions in the world of physics are totally upside down and the wrong way, but we have stuck to them, because that's what they told us. But the truth is any of you can start a new cycle of life by creating an interaction of the fields. And you need to create a condition that once you started the process you can continue to feed it and create the conditions for its life. Life means (that it can continue) to exist).

(So yes, you can do it, if you know how to start with one atom. However, the whole of the matter state of the solar system, with the planets and everything is too minute to control the Sun. The size of the solar system is not dictated by the Sun, rather by the fields of the other structures outside it, and they allow the solar system to expand into it).

(If we suddenly fell into a lighter field strength area in our galaxy, the whole life existences including all the planetary systems would disappear within a second. If such a

thing occurred, suddenly our boundaries would expand beyond their limitations. We are accidents or freaks of nature, of the Creation. It would be like when you are in a plane flying at high altitude and suddenly you fall in a hole of turbulence and you drop thousands of feet. Imagine that happening to the solar system or Earth while traveling in the galaxy. You would drop trillions of kilometers. And if in that position there is nothing to control the expansion of the solar system and its size suddenly doubles, within seconds there would be no life).

(I have shown how this happens in some tests. Maybe in the future we can replicate this test and you will understand. We are soon going back into the lab and I think life will be very exciting for us to develop new technologies for Space and everything else. We can replicate a lot of these conditions, because we have the knowledge, and we have moved into a very advanced stage of (working with the) interaction of the fields and creation of dimensions).

Q: Astral travel has been practiced for a long time by the physical Man. Is this astral travel done by the Man a separation of the physicality and the STP?

K- Explain.

R: I suppose coming from Brazil it might mean Shamans for example, who claim to be able to travel outside of their body and go to other places, or other dimensions. And he's saying, is that separation, that astral travel, done by a separation of the P and STP?

K- (It's not a separation, it's a collaboration and cooperation. It's far from separation. Because you can control, maintain, and operate with it. It should not take long to do).

You can take a drug and get high, which most of these people do. And then you can dream anything.

Q: I want to work on mathematics and mathematical formulations of the plasma. Have the plasma processes of the KF been mathematically modeled yet? From Gans formulas to other applied processes?

K- I always said, "have you ever seen God measuring and mixing things together, and making a solar system?" Everything is accidental. They are coincidental interactions.

(You cannot make a mathematical model of the plasma because for example, you cannot make two Gans's exactly the same and repeat it. Because each Gans has a specific characteristics of the time and place it is made. They cannot be made exactly the same again. It's absolutely impossible no matter how you try to turn it. So how are you going to write a formula for something you have no control over? You can put one drop of Amino Acid (AA), and one drop of CO₂ together. But how many Gans's are in that drop? Maybe in the future we'll be able to count the individual Gans's in a drop. But the other problem is, that they don't all have the same energy. So, writing a formula for KF processes of the fields will be very interesting, but you can try).

(We can try to create a condition within a framework, but you cannot dictate the framework. It's all in the hands of the Creation and Creator. It's the creation and interaction of the fields. This is how the U has been created. It's like an opportunist, but at the same time without any controls).

(Once I asked if you know why the U and all the Creations are spherical like a ball? It's because God loves to play football and footballers are the best opportunists. If you understand the principle of the work, then it's impossible to formulate anything about dynamic plasmatic fields and the rest of it).

(I had some research papers Russian scientists did in the 1990s with computer programs and assumptions about how vortexes of magnetic fields of matter state are created within the Sun. And they went all the way into the center of the Sun. It was interesting, how self-centered the whole structure became. They said the fields of vortexes of Hydrogen or Helium would build themselves into the center of the Sun, and then by compression of the center, they created that "elusive fusion" to go out of the Sun as a field. Which is a lot of nonsense, if you understand it).

(What interested me was how they calculated the strength of these fields. They had to consider all the Hydrogen (H) pieces. It was very nice how they used their imagination to do it, and it's impossibilities. Because every atom of H is different. It depends on its environment, its strength at the point of creation, how long it has been created for, and what is given and taken has different field strengths. If you truly understand the work of the plasmas it's impossible to measure all this. Because you cannot repeat it. And for example, the next Gans you make, even if you use 100% Cu, it still has different atomic structures of isotopes. If you use 1 drop of the Gans, how many of these isotopes are in it? You cannot measure it, nor feel it. If you've been with me long enough, you know that I work on averages of something doing what it's supposed to do. We just cannot calculate it).

(In 2008 when I was in Sharif Tehran University laboratories building the first flight systems, or what we call, the first dynamic power generators this became a discussion between me and the Iranian scientists. I used to open my reactor a few times a day and change the radiation sources, which were from smoke detectors. I never used gloves when I worked with them. I just picked them up and put them back in and created an activation for them. They wondered how I could work with radioactive material without any protection. It's because I don't absorb the radiation. I developed a sense of where to position these two or three hundred radiation sources, and in what manner, to get the field creation and direction of motion I wanted. I never relied on (any formulation). Instead I relied on what I could physically see being created as fields, ionization, and everything else. (The more I worked with the plasma fields, the more I could tell how they would react and which way they would move the larger reactor ball. It became a game for me, would it move it to the left or right, or spin out of control? I did this for weeks at Tehran Sharif University. It was a lot of work to open and close the reactors, because we used silicon seals and lots of screws. It would take an hour or two to set one system. I got to

the point where I could say, if I moved the sources here, then the reactor would fly to that side and at what angle. Then we would turn the system on, and it would happen that way. Let's put it this way, we were correct 2 out of 10, and when we started mastering it more deeply, then we became 3 out of 10. We could now dictate the position of the rotation).

(But we could not calculate how the reactor would move. It's impossible to calculate how plasma will interact and manifest itself. You cannot write a formula for the "Knowledge of the Creator." He didn't come up with a formula, so why is man trying to do a job the Creator couldn't Himself do. Otherwise, when He created the Earth He would have left us a formula saying to mix this and that, to get this. He didn't do it, and I don't think any of you ever will, even with the fastest computers. It is absolutely impossible. But you can try).

(I have had this discussion with many theoretical physicists. (Just because you can't put it in a formula doesn't mean it cannot exist. Because I put the things in the system and it works). But it's impossible to write a formula. Once something can be repeated, it's a technology. But because the plasma is a natural process we don't have the knowledge to be able to repeat it).

(At Sharif Tehran University I used to laugh a lot with this, because it's guesswork, but (it's guessing with experience and understanding). I would love to see if you can write a formula, and if you can repeat it. Good luck, I really wish you the best. If you can find a solution, then I think the Creator would love you for it. Then He can say, "repeat this and you will get the Earth." But He didn't do that. And I don't think man has enough command of His knowledge to do it).

(The 2 reactors on the screen are the two reactors built just about 15 years ago in Sharif Tehran University. (The smaller one is the one we flew for the first time. This is the first plasma reactor ever, that took off from the ground, or from Earth. Inside these reactors there is a specific structure in both of them. The bigger one doesn't move, only the smaller one flies around in relation to the bigger one).

(We flew them by positioning different radiation sources inside the reactors. The bottom of the bigger one is a reserve tank of the elements we wanted to have. There is a specific ring designed for the fuel to convert it into plasma. Inside it are some 350 nuclear radiation sources and how we position them determines how the reactor flies. In Tehran they were free standing without any framework around them. It's like a moon rotating. The small one has about 240 radiation sources and they are with multiple cores).

(We created a field in the big one and could see it expanding beyond. We created a field in the small one, and then we waited to see where these two fields would touch each other and interact. We could always see a small vibration in the small one, and then it would just fly off. The M field forces of the bigger one would push the smaller one off position. Then it was like "catching a ball" in baseball. The little one had 12 screws holding the top on and it rotated at high speed. Trying to catch that "baseball" I cut myself many times).

(The lab was big but we never hit the windows, but we did hit the ceiling a couple times. And we fell on the floor when we couldn't catch it. It was impossible to calculate (how the plasma would react). Once when we moved the radiation sources by half a centimeter in one direction, twice we got it to go the way we wanted it to. The other eight times it flew the other way. So we couldn't calculate it. We could create and control the intensity of the M fields. But we could never calculate it).

(The small reactor is the first proper flying nuclear power generator system (on Earth). We had inspections from scientists from the military, Sepah, and all sorts were continuously coming to see what the next step would be).

(This is the same reactor that Netanyahu claimed was an Iranian nuclear bomb. And we "washed that down the drain" with the IAEA. He was on the television convincing his pal, "Mr. Trump," that the Iranians are building a nuclear bomb. And this is it, but it's a nuclear based flying system, Mr. Netanyahu. We are proud to announce our achievements and our ability to extend our Space T beyond the imagination of the man. We respect and salute them for the integrity of not crossing Iranian borders with such a powerful technology, but kept their agreement to only defend Iranian territory).

(We cannot replicate .. fields, and even though I am a master in it, it's still impossible to do). The next generation which we are developing will have a different effect, different position, and different things. But, in essence, most of the work is understanding and being able to repeat that position.

(The new style of reactors will take a lot of things out of the discussion. The bigger reactor is actually a UFO. It's the shape of a UFO with a tank reserve. The reason I devised such a system is because we did a lot of tests in Belgium, before I went to Iran. So when we were in Iran, we had a clear idea of how we're going to do it).

(We will not allow the turning of the reactor. We understand the field flow, plasma field strength, and it can create flipping. This is what happens when the polarity reverses in the Earth and the Sun. The Sun's M field flips every 11.5 years, and every 23 years it goes back to its original position. To build a system like this you have to understand a lot of things inside it, so you don't allow it to flip. That's why UFOs can travel at a high speed. This system does not give you that possibility).

(It's absolutely loose, but it can reach (field) saturation, and current saturation. Current saturation in plasma is worse than plasma saturation. But most of our scientists don't understand this. Current saturation in the brain of the man, brings on Parkinson's, and epileptic seizures. We understand how to control it. (It's a disaster if it happens in a flight system)).

(It's impossible to calculate a formula, but, if you become master in plasma then you can approximately use it. In Linz we used more advanced systems. None of you saw any spherical balls on any of the machines. Because now we have gone into what we call,

Book 2, transmutation through light. It's a cylindrical plasma field flow. None of you "have a clue" how it exists. This is why it's a different story).

(Your Soul is like the "big ball" reactor in a way. And the little reactor is the STP. If I play with it, you will see shimmering lights, and the manifestation of its (physical) structure. It would appear somewhere outside of it. I can give it (physical) manifestation. I can give it a physicality and you will actually see it. And the system is inside).

(This is what we did with you when you came to Linz. We expanded your Soul and your vision became blurred. It cannot be formulated. But there is one common denominator in all of it, and if you understand it, then you can structure it. It's impossible to write formulas, because no two energy systems are the same. That's why God gave up and said, "I'll mix it, and whatever comes out, that will be the Earth." He couldn't control it, and He couldn't write a formula for it, so I don't think you'll stand a good chance for it either).

These two reactors have a beautiful history behind them in how they were built. (Later, they became the latest controversy used by Netanyahu, the most evil man on this planet. He lied about this space reactor being a nuclear bomb, so he could gather forces to kill more). In essence what we see on the table is the way the U works. But you cannot formulate it, we have to understand it, to get the desire of it.

Rick plays a video of the reactors.

Thank you very much. That brought back a lot of memories, Rick.

(The development and delivery of the next cycle of Space Flight System will be done in conjunction with the Iranian and Chinese military in the coming weeks. It'll be amazing to see how T, even being the same, has leaped forward by hundreds of years in just 10 or 15 years).

(In the future, the new systems will be controlled by our thoughts. It will be through the interaction of the Soul. It'll be interesting to see how it will change the characters of the people around it. (Another thing we didn't think about is that there is already a third reactor here). It's the Soul of the presenter, but at that time we could not explain this to them so that we could discuss it).

(When you look at the Star Formation, the STM is an live operating system in that system. It's the controller. Your emotion controls a lot of it and a lot of people could not, and still cannot understand it. Because you experienced it in Linz, a lot of you can understand it. When you sat in that system you were the Sun in that system. You're not just a Soul. When you put on the Head Units, your Soul is the Sun, it's the dictator of the whole thing. The expansion of the Soul and the control of it is totally dictated by the Soul and it's emotions. It's the same here with these reactors. That's why many of the tests I did could not be replicated. At that time I could not explain to them that I was using the power within my Soul. Because man is too physical to understand).

(The new Space units were shown on the screen from the new KF Space Center. It must be in China. When you sit in these units, even the Head Unit, your Soul is the dictator of the change within your physicality. We will see many of these centers to open up around the world. This Center and system will be openly shown in public in the Macau conference. We will allow people in the conference and the scientists from around the world to personally test the systems).

(For understanding these systems, it needs a wise man to see and a wise man to know how to use them. However, the systems here are more or less obsolete, compared to what has now been produced. What we used in the July Sessions were connected to that system. Only one part of these systems were connected to you. A lot of you experienced a lot of emotions and changes. All these systems were connected to all of you, when you were in the session).

If you understand the power of the STM, you have managed to achieve a lot.

Q: In our solar system there is an asteroid belt between Mars and Jupiter. Was this a planet in the past? Can you tell us something about it?

K- (No, (it's not from a planet). Asteroid belts and all these kind of things (are created out of the conditions (in that area), and come from interaction with the Inertia. Plasmatic field Inertia can trap materials, and create materials from the fields that come in contact with it, and can sustain that Inertia. (These are the fields) between all planetary systems)).

(When your Soul interacts with your STP, and with the Inertia of the environment of the Earth, it makes your body, or physical manifestation. (It's the same with all these asteroid belts, they come from the interaction of two fields. Now you have the knowledge. In the case of asteroid belts the Inertia is of the field strength of the Inertia of the plasma of the solar system. So you always have them. It's the same but another version in the "rings of Saturn." There is no difference. It's exactly the same thing. Depending on the strength it manifests itself in different ways).

(I can tell you this for the first time, because many of you have seen this. You might laugh, but soon you will see it. When you go through a transition or transmutation, sometimes you see only your head and not your body. It's because the fields of the environment you're in are different from the physical Soul. They don't match so it's like you see only half of your body. The first time we saw this it was hilarious. We saw it again with the disappearing of a hand when we were doing tests with Ali in Canada).

(Each field interaction between two systems creates it's own belt or ring. And it's usually at the strength of the two fields, because it's like a funnel, between the center line fields, which are more balanced. So, it's nothing strange. It's the manifestation of two field interactions, one is a Soul, and the other is a STP, and then there is the Inertia of the environment of the solar system. This creates a condition for something like the "rings of Saturn." We also have it around the Earth, but it's a very faint belt. Most of our meteorites get bulletted through that part. The dust that we see comes from this place. They are just

fields that have been converted to matter, and then depending on gravitational pull of one or the other, they shoot inside ??). (Are these the shooting stars we see?)).

(You should have understood this straight away with the knowledge you have. It's a natural characteristic of spherical field interactions. If you adjust it, it can become like a liquid, or a solid, if you adjust again it could become different size blocks, or whatever in those belts. We see blocks in the rings of Saturn. Read the paper I've written about the creation of the rings of Saturn. These things can be answered immediately by all of you with your knowledge).

Q: Back in the days of Newton, why does the apple fall from the tree? Is the apple magnetic?

K- (Oh no, all those things have to do with (matter state) inertia and the rest of the matter state. Can you imagine where science would have been, if Newton wouldn't have fallen asleep under that tree. Where would the science of man be today? It's thanks to that apple).

R: (They should have looked inside the apple is has the construction of a kind of vortex shape inside it and the seeds are an inner core. .. Maybe we could have gotten into plasma technology instead of all the other nonsense that came from the gravity. We still don't know what gravity is, in terms of the scientists of today). They have all the formulas, but they still don't know what it is.

K- Yes, but the formulas (work) because you have a solid mass and you can measure it. (The formulas go through the window when you have a plasma. It's a big difference. This is why we as KS "have to always stay on top of things." We're dealing with two different entities and both of them are real. One is a plasma and the other is matter state. If humanity understands this he can go forward in his knowledge).

(We cannot ridicule what man has done up to now, because that is all in the matter state, and we did the best we could. Now, we look at the energy, or what we call, plasma. Man's world is in the matter state, while plasma is the world of the Creator and Creation. The sooner we understand this, the sooner we will overcome all these dogmas of science. We cannot laugh at them and say they went wrong. They didn't go wrong, because in the matter state they are right. That's where you can measure everything. The plasma state is just fields).

(Once a KS tried very hard to make a consistent Gans, so that he can do a specific test. I told him his best choice was to dry it. Then try to understand how to measure the fields, and then count the number of Gans's in your dried pack, and then go back and repeat it. In the future maybe we'll do that. Even today we have the knowledge to do it. It's the nearest we can come to it, because not every Gans drop has the same number of Gans's in it).

(We have to always try to be on top of our understanding of the knowledge. In our schizophrenic life, which world do we live in? Is it the energy side, or the matter side? If you look at it, when the energy side is reducing in strength it becomes matter state. So, even the matter state is still an energy. We have to be clear about which state of field interactions we're talking about, manifestation of it, or is it still loose as fields).

(The following explanation has a lot of meaning to me. Is it love, or is it the lover? We cannot quantify and describe the shape of love, but we can say what the shape of the body is, or the color of the eyes and hair are of the lover. Does love exist without the lover? Can we explain what love is, if we don't understand the (?? lover)? This is the dilemma man has about the matter state and plasma. We need to respect both. (?? How can you say, I love, if you don't have a lover to love. Or if you have a lover, but don't know what love is). This is very common with Chinese. They tell you they don't know what love is. But there is a lover).

(You have to appreciate and understand both. This is the position of the man today. We have had many lovers, but we don't understand what love is, and we call it, plasma. Because we (?? cannot) tangibly touch the love. As KS we have to understand that they both exist, and one cannot exist without the other, if you're going to enjoy the creation of the Creator).

Q: After the addiction session of last April 27th, I was connected a lot to my Soul and could remember many of the Soul interactions during my sleep time, both day and night, and every day. However, 3 months later I have lost the connection and can barely remember (these) interactions. Why am I losing the connection? Is it because I went back and increased of my food consumption? And what can I do to maintain that connection?

K- (It's the same as when you want to keep fit, you have to keep exercising. You got lost because you had it. That's all it is. Once you learn it, (then continue to) practice it. Don't stop until it becomes your "second nature." Then you'll see a lot of other things. (We all need to understand this). Once you learn it, don't let it go. Practice it, and then it will become more and more perfect, and everything else (will come with it)).

(I have told this before, 99% of the time I don't know if I am asleep or awake. This is especially true for sleep. They tell me I snore the whole night. But to me, I'm actually working, doing things, testing, and understanding things. But the physicality has gone it's own way. While it's repairing itself, I am snoring half of the time. But to me, I'm awake. And they say, "oh no, you cannot be awake, you were snoring." I am not asleep, because I'm literally working and I know what I've done, and what I was doing. When they let me go back to physical sleep, (then I just do) what I was doing. There's no difference between sleep and being awake, or what you call life. It's been like this for me for years and years. Somewhere down the line, the physicality takes his rest).

Q: What does it mean when during the sleep time you have a huge family verbal fight? Does it mean the Soul also goes for fighting?

K- It's the habit of the man, isn't it? I always said, when you fight for something, you have already lost it. When you fight to keep a lover, you already lost the lover. Otherwise, you don't need to fight for it. If in your dream, you fight, find out what you've lost, that you manifested it as a fight. When you see couples fighting each other watch them and figure out why they are fighting. It's because they have already lost the love, it's not there. Because, if it was there, they wouldn't fight for it).

Q: (I am trying to understand about Iran's position. Do the Iranian people have a problem with kingship, and of neighbors that call themselves kings. Lately there's been a new way of thinking from both sides and this has changed everything. It may be a geopolitical question, but how do you think that things have changed? And why has Saudi Arabia just suddenly decided that, knowing both sides of the equation, that they would come closer to Iran?)

K- You mean with the Iranians? I'm going to put it to you in 2 or 3 different ways, because there is a reason for it. (First of all, Iranians are not against the kingship. We are a kingdom and have always been an empire. This is the first time in Iran's history, in past 40 years, that foreigners, mainly Arabs, have taken over the country. It's what we call, the "Ayatollah side." Most of the early Ayatollahs are not even Iranians. The two brothers who head the parliament of Iran, are not Iranians, and the rest of them).

(The thing I don't accept personally with kingship, is that there is nobody higher than the other. However, the Iranians themselves are king lovers. We always had kings. But at the moment, it's what you call the rule of "gun and swords," and it's the Arabs who are ruling Iran. You saw in the uprising of the past few months how the people were slaughtered. The people doing the killing are all Palestinians and those brought in from Syria. They don't speak a single word of Farsi, and they are paid triple price to kill, for the leaders to hold on to power. Would we see a king back in Iran? I doubt it. Not at present. Nevertheless, loving kings is very much ingrained in our life. But as a scientist and working at this level, I don't see anybody as higher than the other, and because I understand the workings of the Soul, rather than the physical frock you see on the outside).

(The present situation with the Saudis is a totally different matter. There is a new structure there that works for the peace rather than war because economical needs are bigger than (war). A lot of things have happened in the past two years in the Middle East that pushed Saudi Arabia away from America. And the Chinese saw the opportunity, and they brought the Iranians and Saudis on the negotiating table. Originally this was because the Saudis did not know where to go, but on the other hand, they had nowhere to go. During the past 4 years they were listening to the Israelis, as they were opening relationships with the Arab nations and the rest of it. We saw on the News where the Israelis sold, I think, 100 million in defense technology to Saudis to defend themselves against Iran, and everything else. Then in January of 2020, when Iran wiped out America's most advanced base in Iraq, which also had Europeans on it, and hundreds and hundreds of military officers got wiped out. They did this to defend the territory of Iran, and prevent the planned attack on Iran. After that I directly put these facts internationally,

and it was passed on, and understood by the Saudis and other Middle Eastern countries. That if the Americans could not protect their most advanced base, from the new simple systems of Iran, which the Russians recorded as just being "black things in the sky moving forward" and annihilating the whole base, then why are the Saudis buying all their technologies that have no use. It was obvious that the ones who sold them the T could not even defend themselves with it).

(This attack in January of 2020, changed the whole structure of the Americans selling weapons in the Middle East to keep Iran out. The Saudis were running with their "heads in their hands," thinking what a fool they have been, and that they made a mistake. Then they gave back the systems to the Americans and their defense missiles were kicked out of Saudi Arabia about a year ago. But on the other hand, that left a fear with the Saudis because they didn't have the Scud missiles and the rest. This is when China moved in and brokered a peace between the Saudis and the Iranians. Before Iran had a very deep relationship with the Saudis, but the Americans came and split it up using the method of the British, "to divide and rule." Now China has put the Middle East back on track. And we'll see more and more of this, because they're all making, what you call, "things out of it.")

(If you remember, we created a website called CIBRU some years ago. It means China, Iran, Brazil, Russia and a "U". Now we see CIBRU is taking shape in the physical dimension. Iran, China, Brazil, Russia have joined the CIBRU. A few months ago in April of this year Brazil signed a specific contract in space development technology with China. On the back of it is KF Technology. It is backed with Iranian space technology. So, what we said some years ago now we see it happening. The "U" at the end was left out, which was planned for the United States, but now there is a correction. The "U" will stand for "United Earth," or the rest of the world. This means we'll share the technology with the rest of the world).

(We do not consider America anymore to be on the edge of Space technology. Actually they're at the bottom of it. This is what's in the news. We don't say anything, because we just set the things up. We always put out things in advance and then we see it happening later).

(There is no need for the Saudis to spend a 100 million buying Scud missiles from the Israelis and Americans, which don't work. And then they made the "devil" out of Iran to scam the others. Now you will see a massive trade relationship in Middle East. It was good for the Chinese to establish peace between Iran and the Saudis, and the rest of the nations in the Middle East. By doing this they're guaranteeing their own oil and gas supply. Because the biggest consumer of oil and gas is China, and they need it. So they all have to play to the tune of China. And that tune is a peace policy with economic growth, and not the "Gun policy" America is using around the world).

(The next thing to bring peace to the world is to get rid of the seed control or GMO used by America to control other countries. In a very short time Keshe Foundation in conjunction with the Chinese and Iranians will move to eradicate seed control through

GMO. It is already "on the cards," and the structure is getting set up. So we'll get rid of both the "gun policy" and the "seed control policy" of the United States. Then no farmer in India will need to kill themselves and leave their children orphaned, because they can't afford to buy new seeds the next year. (Maybe people don't know that GMO means that the crop will not produce seeds for the next year, so every year you have to buy new seeds from the Americans, this is how they control). And the Chinese farmers won't have to live at the poverty level, because they cannot afford to lose one cycle of crops. Very soon the Chinese farmers can start this. We'll use the same GMO seeds, but convert them back to their original seed, which means they can reproduce new seeds and you don't have to buy new seed next year. This amounts to half of their income which they need to survive until the next harvest. It'll bring China out of poverty, especially a lot of farmers. The Chinese have a different understanding of it).

(We'll see the ending of two things that bring war and mayhem around the world, as well as hunger, and literally hundreds of thousands of farmers killing themselves, because they cannot buy seeds for the next year. We'll change this through the collaboration with KF China, and the scientific and farming communities). Maybe it will take 2 or 3 years to get through this process. We are creating the conditions for peace and this is one of the works KF is now involved in, in China).

(From where we sit, we're looking out at Beijing the most beautiful city in the world. The teachings are coming from here. We see China becoming the "breadbasket" of the world, but not for controlling others, and it's a big difference. America pushed itself to become the breadbasket by creating wars, division, and then seed control through GMO. China is going in the reverse way, where we share the knowledge and T so farmers become free and out of poverty).

(The GMO is more or less like putting a piece of dirt or a poison on the seed, and we simply take it off. We can change it through the plasma fields and we have shown that it works. We will see another "feather" gone from the "wings" of American policy of domination through Guns and GMO policy. Soon this will all stop).

(The GMO is needed for the betterment of the seeds, and to give a better harvest. But (they purposely put another layer on that will not allow the seeds to reproduce). And we have found the trick of how they do it. So you can still buy GMO seeds to grow your tomatoes, potatoes, rice or whatever, but then through the right (plasma) field structure the seed will be changed so it can reproduce. Don't forget the GMO is something they build into the seed. It's like a layer of clothing. We simply take off that layer. Up to now we didn't know how to do it. Through the plasma technology we can do it, and "GMO Policy" goes down the drain. That's for sure).

(The structure of how the Chinese will grow will give them national food security, but also will ensure that the rest of the world will also have enough to eat. So if you want to bring comfort and peace to your nation, you not only bring it for your own nation, but all the nations as well. This is part of KF signed agreements with the Chinese government and our work as well. Our technology will not stay within the borders of China, but will

go out to the rest of humanity, unconditionally. They didn't put any condition on its application. And we have tested it (and they have shown the new position)).

(This will help countries like Iran to feed themselves when they can get rid of the GMO. The Arabs will come the same way, and so will the rest. Step by step we are moving in that direction. In maybe another 5 to 10 years we'll be able to feed every man on this planet. In the past few days we were at dinner with one of the people who run this country and I explained that we can go a step further. That we can send the food as energy over the telephone lines. In this way we can feed nations. With the new T achieving national food security by storing grains in thousands of tons and controlling it, is finished).

(All of you KS know it, because you tested it in the Monthly Sessions by putting the headphones of your telephones on and receiving the fields. We are testing more of it and then we'll see how it comes. We have found the code and we all can decode it step by step and bring that position together).

(When America goes to war one of the things they do is to target civilian food supply. But this almost never comes out in the Press. They bomb food silos and the nations food reserves. But they don't allow anybody to tell you about it. You wouldn't do that to your dog, let alone to a whole nation. With the new advanced plasma systems we can feed nations in time of disaster, we can even help the US, and feed them from China. All you have to do is to put on a pair of headphones and you can be feed what you want. If you like "fish and chips," you'll get fish and chips. So using food to control people is coming to an end. The system you see on the screen is being tested every day through your participation in our programs like the Monthly Flight sessions and whatever. You are helping to bring this change).

(We'll try to do the Thursday teaching from Manchester, so that you can be part of the conference with all the KS present. We'll run an open session and hope that we can share knowledge with each other at that point).

End of Quick Index - 498 KSW August 10, 2023

KEY-PHRASES:

SUMMARY:

ENGLISH TRANSCRIPTION

(:20).

K- Yes, thank you very much. Good morning, good day to you. As usual, wherever and whenever you listen to this series of Knowledge Seekers program of the Keshe

Foundation Spaceship Institute. As usual, we welcome you back. And as usual, we try to understand a little bit more. (:22).

Last week, we touched on something very, very important, and the week before. And we build our knowledge of today on the basis of the past 3, 4 weeks. One of the most important points of our work, as we said, we have managed to, in connection and cooperation with the Chinese military, show the production of materials, show production of organics, show the production of elements, doesn't matter in what shape or form. But, what is the ultimate target? Are we still going to make Calcium, Copper, and Zinc and whatever? Or, is the ultimate target of all this work, is to be able to understand, to make the Fields of the Soul of the Man (STM)? At the strength of it's work.

We have replicated to show the energies of the Matter. The ultimate goal is to be able to replicate and produce the energy, the spectrum of the Fields of the Universe (U). And one of them be the strength of the Field, which leads us to the Creator. This is the work, this is what we are targeting for.

And this is not just to show we made elements, it's not to show we, we managed to make a gas. It is a stepping stone towards the ultimate goal. To create that ultimate field which makes us, and that process allows us in that position, create a condition for us to board the line, jump on the line, connect with the line into our Soul, to the dimension (D) and direction of the Soul of the Creator.

But, we are learning step by step, we are learning gradually. (:24). We came in with nothing, we came in with a stick in our hand in the caves. We didn't even know what a fire was, that we understand the energy conversion. We learned step by step about the metals. We mastered them. We alloyed them. We made chemicals. We became nuclear physicists. Now we become Plasma Physics, and then we become "Creator Physicist." How do we find a line to our Creator? And then with that we become the ultimate goal, we become what all the Creation is about. To become that part, and parcel of the Creation.

When you look at the magnetic fields of the Earth, it starts from the North Pole and it turns back to the South, as you've seen in many (pictures), that Earth is the "creator," it's the center. And those fields show the way you can get to the center of it and become part of it. Creates its atmosphere, creates its dimension of Creation, interaction with the others. And this is all the ultimate goal, to be able to jump on one of those fields. That in rotation and movement, in the direction of what we call, attraction, we become part of, we touch the Soul of our Creator within, when we go through it.

When a magnetic field goes through the Earth, touches what's inside, in the center, absorbs energies from it. And as we know, the North Pole, the North Pole of the Sun, or the Earth, is always slightly warmer than the South, because it's gathered energy, it's gathered magnetic fields from the center. And, somehow it's become part of it. And this is the whole subject, this is the whole principle of the teaching. The ultimate goal.

Will it come to the point that we can create fields, that the interaction of their fields, will... the interaction of the field of our Soul, (:26). puts us on that path. That we become in that part of the hemisphere. We become that part of the atmosphere and rotating, we create the dimension of manifestation of the existence of the Creator. Now you understand what it means, "I am the beginning, I'm the end." I'm the Creator and I'm created from the creation of my own.

Now, what's the ultimate goal? How do we make that system? To make what... if you go back to the teaching of the... some months and years ago, I taught you, I told you many times, "make Gans's of Gans's." That the interaction of the Gans's of the Gans's, allows you to create that field which leads at the strength, if you get it right at a certain position, the strength of the fields to get on that line of the loop, of the fields of the Creator. How closer you getting, or the further you are, is the strength you absorbed. And then the closer you become, the more enlightened you become. The more you have to give.

The fields of the Earth, 50 kilometers are cold, and the fields which are near, in interaction with the field of other, and the Inertia, creates life, condition of life. Condition of existence, manifestation, creation. And this is all it is, we are somewhere 500,000 kilometers away from the center. And we are trying to jump in, "frog leap," and come into the inner circles, to be able to get close enough to Earth, to close enough to the Soul of the Creator, that we manifest, we show the Creation and the Creator through his Creation. (:28). Now you understand.

In the coming time, in the coming days and months and weeks, we endeavor to make that system. We are working on it. We are working on making a system that creates the fields of the Creator, the ultimate goal. And then in the interaction with the STM, becomes the will of the man. "I am in command, through the interaction of field of my Soul, to create what my wishes, in the dimension of the wishes of Mitra." We are all servant to her, and nothing else. And through serving her, we serve the Creator, and nothing else. And Mitra it's not a creation, it's not an entity, it's the principle of interaction of the fields of the universe. It's a path of living, it's the way you interact to lead to creation of the perfection.

Now you understand. All this teaching, all this going from Gans's to this and that, and the MaGrav system, and the rest, has been to bring you gradually to the position to be able to create the fields of the Creation. Then, you become the beginning, and you become the end. Depends where you jump into the circle, on the North Pole as it comes out, or on the South Pole as it goes in. But that "Pole" is your Soul, that Pole is the Soul of the connection of you with the Creator.

Every Soul, in the essence of its creation, at the point of its manifestation, has the field line common denominator with the Source. There is none, no life, there is no Soul, there is no existence in the universe, which has no direct connection to the Soul of the Creator. (:30). Now it's our job to find that, to find the strength of, to create, to build systems within ourselves, outside. Man is genius in building machines to replicate and create that field. That single field, that in coming in touch with, in connecting to, we get enlightened. And then, we see the whole knowledge of the Creation. And we become part of the

Creator, that itself is created out of his own creation. It's very much if you read the Book 1, it's the story of the Creation, interaction of the field, which leads to Mass and to Weight, out of interaction of their own by them.

Now where are we going? And how (do) we reach this? We have shown in the position and the power, creation of some 30, 40 elements and organic elements in the past few weeks. Keshe Foundation (KF) in collaboration with the Chinese military, now endeavors into the next step in the coming days. We endeavor to create a new condition. We endeavor to show the existence. That is, how actually it starts. And where and we enter the fields. And then where can we exit the fields. For you to get from North Pole to the South Pole, if you're lucky, and you're on a rocket, or you can drive and swim and everything else, takes you a few weeks to get from the North Pole to the South Pole, or at least a few days. But, the fields of the Earth from North to the South, is instantaneous.

Now, we are interacting with the field of the Earth. (:32). What about the fields of the universe, which already interact with the field of the Earth, and we jump on them? And then, what about the fields of the Unicoise, we interact with us, within the structure of our universe, if we get on them? And then we know all these fields comes from the fields of the existence of the Creator. What about if we jump on that? It's not impossibility. It's the lack of knowledge. It's not that it's in the dream, it's the reality that we have not understood the principle. And now we are setting in that direction of dimension.

In the coming days and weeks, we will show a new dimension, a new structure, a new way to think, to interact, to feed. I walk within the fields of the system and I receive what I need, as medicine, as food, as energy, as the interaction of the fields to interact with the Creator. We are entering a new dimension in science and technology, we are entering into a dimension that we can put a blind (man) near the system, and he walks out, that he can see the whole Creation. Not only the physicality (P) of the man and the Earth.

The exploration of the science and technology in the coming days, with the Chinese military, will open a dimension in the world of science, that even the scientists will not be able to understand. It'll take them hundreds of years to understand how we did it. And how we will develop this position and condition. where you can bring a man blind and walk him out. (:34). He can not only see himself with the eye of the man, but opens the eye of the STM to the world of the Creation.

We saw the beginning of this process. We saw the structure of this process weeks ago. When the first Chinese military officers walked into the room, and they saw fields, they saw everything, and they could not believe. But I cannot tell them what's in there, because it breaks ?? .. our understanding, these people are blind to the knowledge. Now we set to watch. We set cameras, field detectors, and everything else possible, to understand how can we find a Soul, can we find a fields interactions, and then we invite the world leaders to see the world of the Creation as it's created.

The collaboration between the Iranian government, Iranian scientists and Chinese in next few weeks will break through a new world of science, beyond man's imagination.

Because when we showed it, and when it was seen, in the past few weeks, has put the scientists, and the military and the man to be baffled.

It's an unknown science, but we have two choices. We have... we can drag you along in bits and bits, or literally drown you in it. And I think drowning the man will be better, because he will learn to swim, than dragging it, that the hope he'll one day get to the water. The understanding of the science, the understanding of the technology (T), the understanding of the knowledge of Creation, is at the reach of every man. (:36). It doesn't need any Prophet or any Holy book. It needs clarity of understanding, it needs the being in the position. Being in a position to accept, to see, to analyze and then not to judge.

As I always said, repeated most of the time, when you came to Linz, we said, we are not there to judge (you). We accept what you see, what you've seen. Some saw the mermaid and some saw and felt the Soul of the Christ. Some went on the Moon and touched the stone. And some came to see nothing, came blind and went out blind. The arrogance bring blindness. And the servitude brings wisdom, understanding. And that comes through the Soul, that comes through the interaction of the fields. In talking to man, Man has seen and has to see everything in the dimension of physicality. In talking to the wise man, he understand the wisdom of the Creation and sees the fields.

In the coming days, and I'm sure if we get the collaboration and the work of our team and with the team of the Chinese military, we will open, we will show, we will detect, we will do everything to bring in a new dimension in the world of the science and technology. Where we do not need to produce anything to live, and once we connect to it, we are connected for life. We shall not kill, as we receive what we need. (:38). We live through the dimension of the purity of Mitra and the ethos of creation, and in all three dimensions of the essence of the creation of Mitra.

Maybe, maybe now, maybe in the coming time, maybe in the next few weeks, we'll change the course of humanity by physically showing it to humanity. Many of you will burn your books, and many of scientists will deny the existence of the ?? past. But it has to be understood. We deal, we work, and we show the dimension of the fields in motion. What we dealt with up to now, as I've said many times before, is a matter state.

There is a difference. Maybe. In a simpler way, I can explain, it' .. matter state is connected to the Inertia of the fields in matter state. And the plasma state is connected to the inertia of the plasma state. And both exist in collaboration, in conjunction, and within each other. The man exists with the Soul within it. So man is aware of both dimensions. To what extent, to what limit, you as Knowledge Seekers (KS) come to cross that line, get rid of your dogmas, get rid of what you've been told in the matter state, hold it, treasure it, and keep it. And then try to understand the world of plasma, world of Creation.

But the best tool, the first thing I could give you was MaGravs. And I keep on telling you. (:40). And I'm hammering it in, and I'm hammering it in, and it's still there. "It gives

only 30% reduction." No. See what fields it creates. What are its potential? What are its dimension? And then take the next step. And maybe, maybe in the coming time, you as KS will become the first passengers of the Unicose, then the Universe. It doesn't take much. It's just a "flick of a finger." It depends how you flick that finger and how it ends up, and how that coil rotates, and how it lands.

Try to visualize the interaction of the fields from a bottle of Gans in front of you. Try to visualize the interaction of the fields from a dynamic coil in front of you. Try to visualize the existence and interaction of the fields of the Gans's in front of you, with the room fields, with the atmosphere you're in, within the Earth. And then see, if you have not missed one thing, you were too busy to see how these fields goes, and you forgot that fields are already interacting with your Soul. Then you understand the wisdom of knowledge. As usual, too physical, you forgot about the reality of the Creation.

The teachings from now on, is not so much about making things, is so much about understanding how to connect fields. And, as I said, (:42). the Creator did not make a machine to make fields, He was created out of and He created from it. Now you're in the same position. Try to see, try to understand how you can make reactors without motors, that only interacts within the fields. I released this paper years ago, "Creation of the Motion in the Universe," and no one looked at it. Maybe, it's time to go and back and look at it and read it, and understand it. And then you might be enlightened, how man has reached the condition of creating motion, as you call it, motors, without engines, without burning fuel, without coal mining, without the donkey pulling and something else pushing.

In the process of understanding, in the process of the totality of being part of that, in completion of the course, man needs to understand the interaction of the fields. How and which fields he will use, to heal his cancer. How and which fields he'll use to satisfy his hunger. What fields and what position he'll use to create water, that he does not go ?? off. A few of you who joined, you were flooded and you could not hold enough water. You were producing so much that you were drowning in it. If you push it a step further, you should be producing so much fields, (:44). that instead of feeling it in your mouth, you feel it as elevation of your Soul. Enlightenment. But, as you are so materialistic, having that water was more important than actually elevating your own Soul.

In the coming time, as we develop the systems for the creation of the ultimate fields of the Creator, many of you will walk away from physical life. Many of you around the world will link to the line, to become the "passenger of the universe." Many of you will come to the position to understand, this physical life is not worth, as it stops the pleasure of enjoying the dimension of the fields of the universe. We were happy with the room in the village. We came to town, we made apartments and villas to enjoy the city. Now we take our Souls for a trip, in the dimension of universe. But we have to understand, how and what, and what to give and what to take, that we make sure we reach home, we don't go backwards. And come forward and says, "oh, I was there before, haven't I?"

Try to envisage, try to envisage the fields and not the matter state. Don't look for electricity, look how interaction of the fields created that electricity. (:46). Many times, I asked you to look at the fields of the MaGravs to understand it. Try a new way to interact with your Soul. Try a new way to elevate your Soul. Try to understand the fields. Try to become part of it, and not an outsider observing it.

In the coming weeks, I will show many of you how to reach that point? How to extend the Soul? In the meeting in Manchester in the next couple of weeks, we start this process. And in a way, you have time till November to practice it, your "homework." And see how many of you in that process manage to reach or understand the process of the creation out of the fields and not out of the books of the history. (:48).

In the conference in Manchester, in the ?? teaching part, many of you will come to meet, to feel, to understand your Soul. To be able to cross that line, and to be able to understand the Totality of the Creation. My only wish is, that by the time we finish on Friday, those of you who understood, do not need a flight back home, as you already are home. Home is not in the dimension of going back to Mexico, or Canada, or somewhere else. Home is finding a way to the path of the Creator. For yourself, by yourself. Through understanding of the fields, interaction of the fields, in being able to manipulate the fields of Creation.

I hope many of you will come to understand more in a shorter time. But I'm sure in the trials coming up with the Chinese military, as we try to understand and transmute in the time to come, the Chinese military forces from one point to another, we bring in a new dimension of life, a new dimension of science and technology, as we become the "soldiers of the knowledge." (:50). It's not easy. It's not going to be an easy task. But, we have to. We have no choice, but to start somewhere, and then build on it. To the next step, to the next understanding, to the next completion, and accomplishing what all of you have been waiting and wishing for.

Try to understand the fields of the connection. Try to understand the Totality of the Creation. Try to feel the fields, and try to understand the operation of the fields within you. Many years ago, I explained to you, you can hold your hand and create a light in the palm of your hand. I think the knowledge has reached that point that some of you can. If you understood the work, some of you by now should be able to do this. At least you can make attempt to do it. And then, it's not the light in the palm of the hand which we are looking for. Then it's the light of enlightenment, the light of understanding, the light in a way as knowledge, not the physical light to be absorbed.

New systems, new technologies will emerge from the Keshe Foundation in the coming months, and weeks, and months, and days, and God knows years. But, we're still making Gans's, and still making Gans waters, (:52). and God knows what. But again, as I said, it's like a school from zero to twelve. Depends how much you understood, in which class you sit. Try to comprehend, try to feel the fields. Try not to pretend, but understand the reality of the Creation.

Thank you very much. The teachings are short, but very deep, and you have to understand it. We go through a small break, and we come back, and see how we ?? baffle the knowledge. Thank you very much Rick, if you want to take us to a short break and come back.
(:53).

<<< **BREAK** >>> 498 KSW Aug 10, 2023 (:57).

K- Not really, we always say what we have to say. There are a couple of things as you know, that we are planning to end the productions and the materials which are at Keshe Foundation. We've made some of them, two for the price of one. That we clean out our, what we call, stock. (:58). And as we, in the next 6-12 months, gradually become part of a bigger structure and you will see much more materials and products through the new joint venture with the Chinese.

It'll be interesting to, what you call, how we will bring new materials, new understanding in the next cycle of what we call, products. But we have to get, we have to finish with these. As we have given notice to, literally move out of the Linz Exhibition Center, to all that products, we are trying to, what you call, share, it'll be, what we call, the last products from the Keshe Foundation as an organization.

In regard to Manchester meeting, a few people have moved their position to another sessions, like in November. So, if you, there are some of you still want to join, there's still one or two places available. And, now we are taking, looking for the November, and the meeting, the world ambassadors. We are striving now to have a very, what I call, colorful, exhilarating experience, in the weekends with the world ambassadors. Some of them might join us from the beginning of the day, then just the evening session. And, we have put forward our invitation to some of the world leaders. ?? (They are) understanding the position we are in. It's much easier to create that condition, and we will, in a way, push to the advantages of this position, to be able to share the new Space Technology, and new understanding.

And, as I said, in next two years, (1:00). Keshe Foundation, the way you as Knowledge Seekers knew it, I think only, this Thursday teachings will be a remnants of the, greater Keshe Foundation work originally. As everything will move into a different scale. But, we'll keep the Thursday teaching as part of the totality of the teaching. We are working

on it, step by step. The, what I call, it's not an easy job. And, as we grow, now out of what we are as a, what we call, a Foundation work, as a Foundation and a, what I call, part of a larger international organization. You got to bear with us, we will as usual, this is the habit of the Keshe Foundation, we still make mistakes, we will make some good mistakes and some bad mistakes, But overall, we should be able to move to a new dimension and direction. And we'll see where and how we will come out of what we call, this position in next 5 or 10 years.

If you look at the digits on the screen, we've been here 498 sessions, non-stop, every Thursday, doesn't matter how .. we shuffled it from hours, or whatever, we've always been there to share knowledge. In two sessions it'll become 500. And this is a huge, huge ?? Non-stop shared, non-stop participated.

In the back of now working with the strong nation and the structure like China, (1:02). we'll go back to a lot of things which we left before, with the intimidation of, what I call, we just take from, from the Germans and the hooligans in Belgium and the rest of it. We will organize ourselves in a way that no one can touch, no Knowledge Seekers. And we go back to open sharing, that you can come and show your products, you can come and show your intellect. You could share a way to be able to add to the knowledge of the others, without getting intimidated by the others. We'll bring in national security forces to protect the Knowledge Seekers to be able freely to work.

And as I always said, it's time for us to move on. It's time to change and a lot of us are working to bring that change forward. And now we have people who understand what the change is and are there to support, to give the helping hand for humanity to move forward, it doesn't matter in name of what knowledge and whatever.

So join us in Manchester, or join us in November in London, and then we hopefully start seeing a new dimension in what I call, understanding. And move away from this "Gans production" and everything else.

Any questions or anything you would like to share?

Q: ... (1:04). .. (K- You know it's a very strange feeling when you keep on saying Derek (Red Circle's name was Derek). Q: Hello your Excellency. ..

K- Could you tell us where you are from.

Q: I'm from Münster, Germany. And I visited the Space Center in Linz in June the 12th and the 13th this year. And well, I was very excited. And first I want to thank you, Mr. Keshe, that you give all this knowledge, which I'm getting through the workshops. And during that time I got mature with an age of 53. And I just add, my name is Dirk, D-I-R-K, and in German the day is "Dienstag," I opened the planet at 6 pm. I want to thank all who gave me this power to do it. And the only two things I saw was that the people calmed down, they don't walk that stressed like before. And all the paintings on the cars and walls and stuff got like they were sold yesterday. That was these two things I saw. But I guess there are a lot of more things which happened during that opening. (1:06).

So my question to you Mr. Keshe is, what else happened? Because I think this was starting the peace process, or the initiation of the peace process for the, globally, for this planet. That's, that what I, that's my thinking.

K- I don't understand your question, I don't understand what you explained.

Q: Well, I just pushed at the 6pm on that day, pushed the energy into the planet. And I just saw that the people calmed down and the cars got new painting and stuff. But my question is, what else happened during that planet opening us initiating the peace process on this planet, that's my question. If there are any other, other reactions happening during that opening?

K- The peace process is a long, long, long haul, road, and work. We as human race have battled and fought and we still seeing skirmishes of fighting, that a lot of us have ?? occurred and that peace can exist. But we have to establish that peace .. within ourselves first. And we've seen a huge leap compared to 10 years ago, with wars. We have more or less one war, which is going on now, which is, in a way, can be stopped with a flick of finger, but it's Christians fighting each other, as I call it, nothing else, in Ukraine. (1:08). And, otherwise, if you look, all of the scenery in Middle East is peaceful. The whole of scenery in far East, we had Vietnam, we had all the skirmishes in the far East, we had wars, Japan and the rest. All these are gone. This last war between the Christians in Ukraine, in what you call it, Catholic Church and the Russian Orthodox Church, soon will come to an end. And then we'll see a permanent peace. They might try a few skirmishes.

But, we have to maintain a momentum that man does not go back to this. You can make war out of peace, very easily you just need one trigger point. We have to change that position, we have to ?? reach that comfort, it's not there. And I see this doable, it's achievable. And once we finish with this animosity between, or what you call it, "two Churches who's got more gold," we will see a long haul of peace on Earth. But we have to push it, that there is a hope, there is a change. There is a next step, that we don't go back to it, that we start forgetting.

If you look at it, it's a habit. I'm Iranian and I'm proud to be from land of Iran. And one of our biggest points, (1:10). one of our glorious time, is that we have not crossed our borders over 300 years to war. We have matured a little bit. We've seen the Islamic government of present time, which half of them are not Iranian. Our parliament in the first 20 years were half Iraqis. Our leaders are not Iranian. They don't carry a single blood from Iran in the first cycle. As Iranian, we never cross borders. 300 years, we don't see any reason for war. And if you go back to the time of the Persian Empire, During the time of Darius and Kurus (Cyrus the Great), they didn't fought. They expanded to Iran to be the largest, even to today's standard, ever, nation on Earth. By other leaders joining in without a fight, to be part of, to be part of a peace nation.

But, in times in between, we got arrogant leaders who wanted to show they have "testosterone" more than the other, and they went into wars. With 300 years we have kept

our borders within. Now, can the humanity come and say in 300 years no bullet has been fired? In 500 years we don't have factories to produce tools of killing. And then we'll see we change gradually.

Q: So it's nice to know that the people who invented the firepower of China is now turning into a peace state. The first one. (1:12). ??

K- Either way we have to ingrain peace within ourselves, within our nations, within our, within our structure. And there are two ways now, at this point, to do. And I explained this to military people a few times up to now. We can go for building a more advanced weapon to be better, but by fear of having it, stop the others doing, or just don't make any weapons and just keep there. We were looking at the military data in the past few days, analysis in what you call it, political dimension. China has 2.4 (million) soldiers or military people under .. arms, or under the military base. And some of the not very far nations from this country have only 16,000 soldiers. Then you ask yourself, do we need soldiers? Because the 2.4 million and 16 (thousand) is nothing, just march it over, it's an ants.

What are the nation spending money on defense? We are in a position now, we are in a position of scientifically in a way to "put the carrot out," open the Space. And open the space not with war, that will be no war in the Space. (1:14). The way the politics of the Space has to change is that, we are going there because we are peaceful. It will be amazing for me to see... I wondered many times when I look at like this Apollo 1, Apollo 9 or 10 or whatever and we see this Mr. Armstrong supposedly walking on the moon. I asked this question for Americans once, and I put it to you maybe for the first time. Did he carry a side gun in his suit, in case he sees somebody he has to shoot? Do you understand?

Q: Yes, I understand.

K- This is the principle that we have to look at. Did any... does any of the people go to space labs with the whatever international labs, and the ones who are planning to go to the Moon, how many of them will carry a sidearm?

Q: None.

K- So are we going to say goodbye to killing?

Q: Yes, I guess through the next 5 to 10 years we are saying goodbye. That's my ..

K- Yes, but we have to watch, we have to watch, that we have to offer an alternative. We have to bring a condition of peace. As you know, Keshe Foundation is expanding in a very, very different... You've just seen the "tip of iceberg" in what is done, even people are inside the Keshe Foundation, most of them don't know what, where it's going, what is happening, or whatever. But, if you understand, if you comprehend what is going on, (1:16). in the next 5 or 10 years, do we need to eat, do we need to feed? Every time we

introduce you, we ask you to come to these (Monthly) sessions of the Keshe Foundation. What are we offering you? What are we putting as a proposal?

(Just one second please, I've just got to get a cup of tea...)

What are we offering? What alternative we can put to our government? What is the proposition to Biden? In the upcoming meetings, in the ambassadors in London, what do we have? What can we show to the world leaders as an alternative? We have to, as a scientific organization, as those who many of you prayed, put (sprayed Gans) water in the things, and Universal Council members prayed for the wish for a peace, and now you got the peace, and we just want to tell you, only we look at this "flinky" job in Ukraine, how many of your wishes has been answered? All of it.

Why didn't it happen in past 20, 30 years, (peace) marching (on) all these streets and everything else. So the Soul of you Knowledge Seekers has a power. Doesn't matter how you turn it. And this brings you to a new point. What can we offer our governments, our leaders, our nationals, that they will not carry that "side arm" into space. (1:18). And what would be in the breakthrough for all of us, when we see this position?

I asked NASA people years ago, were there any guns on the Apollo? They said, "why you ?? shoot there?" I said, "why you lot keep on talking about demilitarizing the space?" Don't take the gun (you didn't take a gun, so), don't do anything. Space is demilitarized. Or are you trying to say, it'll be interesting, and I'm sure sooner or later somebody going to test it. How far a bullet will go, if you shoot it in the open space of the Moon. Can we shoot the aliens if we see them? Has the space people ever thought to leave a gun in there, in case we have to shoot an alien in space?

So, automatically we have lost this idea, when it comes to space. Our space leaders, our scientists, our astronauts, don't consider it necessary. Can we make it the habit of the man. Can we bring that change. But we have to offer a valid alternative.

As I said many times, when I went to England in 1973, the first time, I was shocked. In Iran we saw soldiers, I was brought up near an army camp, guns, and different shapes and size of it. I saw Americans as our neighbors and tenants and everything else, guns everywhere. I came to London the police officers had no gun. It was a strange, very strange feeling. (1:20). Police with no side gun. And this was ?? its comfort zone. A few .. years later, for the first time I saw an officer in London with a gun. I went to him and said, "why are you carrying a gun?" He said, "the streets are becoming dangerous." I said, "you make it more dangerous carrying a gun, carrying it like this." Because to me it was a nation going backwards. Nation which was no arms on the streets, became armed. Now in London it's just worse than Holland. The only one who hasn't got a gun, I think, is the sick people on the bed in the hospitals. Everybody else carrying something somewhere.

So we have to not only make the Space a place of no war, but do the same with Earth. And we have to create and deliver a viable alternative. And that viable alternative is, teach you about your Soul. Teach you understand you don't need the cars and the, what I

call, ??angers and eagers of the financial world and the rest of it as we have not managed yet. I know the bank of China and the World Bank have not opened any branches on the Moon yet, that you can get somebody. Think of it, if you go to the Moon, and you run out of money, what do they do, they unplug your breathing suit? Or if you go with your Soul, you don't need it anyway.

So, a lot of things we created on Earth, automatically becomes obsolete in space, and automatically will come back to Earth to make it obsolete. We have to go through that transition. (1:22). And we have to keep the option and the technology open. So, we have already started the world peace.

We started the Universal Council, on the 2nd of August, few years ago. And that time, none of you Knowledge Seekers knew, except a very handful, maybe less than a handful of people, that actually the establishment of the Universal Council, the first session and everything else of it, was when we were in China. It was broadcasted from China, it was set up from China. And the whole program of the beginning of the Universal Council, started in the isle of Tarsania in South China Sea. So, China has been the birth of the place of the whole process of the new cycle, it's not new.

I still remember, we were with other Knowledge Seekers in the island, and at about the time, midnight, when we were starting the things, and the whole thing was going on, we saw a massive UFO over the whole island, over the buildings, with the lights and everything. We went outside, listen to the recordings of that time, how it was spoken about.

Because it's a Universal knowledge, it's a Universal desire of the man. And we stood out in our villa on the balconies, and other Knowledge Seekers near us in their villas, in their balconies, (1:24). looking at the sky and seeing the lights, the beautiful conditions of, what you call, UFOs, but in a plasma condition. It was amazing "fireworks." And wherever we went to establish, to bring that essence of peace, we see it happening. Space is a peaceful place, and by taking man to space, and bring him back to Earth, he'll become peaceful, because he doesn't have it there, what should it be here.

But we have to satisfy the hunger of the man, we have to satisfy the, what I call, health of the man, and we have to satisfy man to be secure on this planet. And then we move to a peaceful Souls, peaceful conditions and so on. Once you learn, you can travel with dimension of the Soul. Once you get, learn that you can expand the dimension of the Soul, to get rid of the illnesses. Once you learn that you can use the expansion, connection of the Soul, to get the energies you want. Do you see slaving ourselves for 8,000 days behind the desk, that somebody gives you something you put something in your mouth. Or you spend your time gradually in developing conditions for peace within yourself, and then ?? move through your neighbors.

In a way, we have started the world peace. Go back when we started years ago, when we elevated the Soul of the world leaders, and look at it today. And even the situation in Ukraine is resolvable within one telephone call, and nobody is prepared to make that call.

Telling the Vatican to, "pack your bag and go." And then we're all at peace. (1:26). As I said once to those who were in Italy with us, if the Swiss guards and the priests keep themselves ?? with each other, which is their job, then most of the world will be at peace. A bunch of "gay guys creating fun among themselves" has created ?? a mess for the others. And this is the position we are in. You always bring people around you who are the same as you to protect you. Ask yourself, why do we have a Swiss guard? The biggest gay club in the world. And who are they protecting? Bunch of child abusers. And now they want to take over the biggest Church in the world and Russians are not letting. Soon later it will be resolved, but it will be the end of Vatican. You'll see and you'll understand. We see the end of it.

Q: No more fairy tales.

K- No, this is reality. I lived in Italy, you see them. How many of Swiss guards you see walking a straight?

Any other question, please?

Q: And I just want to thank you for the ?? ring, I got the message.

K- Thank you very much.

Any other question?

R: Yes. We have another hand up here with...

K- You know something Rick. Sometimes, baffled, past 10 years we've been with each other in teachings, to see your face, when I talk about things. And you still keep a straight face. (1:28).

R: .. yeah

K- Where are our Italian translators? ..

Q: ... My question is a very simple question. As we know, our planets run around the Sun. (K- Yes) Now all our planets run around the Sun. (1:30). And every planet has the same center as the Sun?

K- You mean in our solar system?

Q: Yes, but the question is, is the Sun the result of the Sun of the plasma produced by each planet? Is it possible to reproduce the Sun in our world with small ?? gaps?

K- The total mass of all the planetary systems within the Solar system is in the same ratio as we see in the universe, about 5%, less than even 5%. If you put the total mass of all the planets, Mars, Moons, everything together, ?? and all the dust, cosmic dust, and

everything together, it's not more than 5%, even if that, of the total mass of the solar system and the Sun. So we see the planetary system moving around and playing their games with the different sizes. But then we realize mass is irrelevant. It's the fields which dictates their position and their speed the rest of it. But their existence has certain control over the Sun, but does not make the Sun. We are the containment of it. (1:32). But we cannot make it to be.

The gravitational pull, the strength of the fields of the mother is too heavy. The love is too strong. So we cannot make it, but with the energies within it, we can be part of it or create another cycle with it. Not necessarily within the Sun, but outside the Sun. This is why Earth is a greenhouse (nursery). We're creating those little "dusts," called the STM. And these Souls in the future, in time to come, become the stars.

So, it has a capability, the totality of the structure of this matter state of the solar system, has the capability to create another star, without a doubt. But you have to create a condition for it, that they change from matter state to the plasma state. You have to observe, you have to understand how it works, that it leads to creation of. We can start with one atom at a high energy, and start the process of attraction between the two, and like an egg and a sperm, start the cycle.

In our assumption in the world of physics, it's totally upside down and wrong way, and we stuck to it, because that's what they told us. And that is, you, any of you, can start the cycle of life, by creating the interaction of the fields. (1:34). And creating a condition that, once you started this, you can feed it and create condition of the, what you call, life for it. Life means consistency to exist.

So yes. You can do, if you know how, you can start with one atom. But, the whole of the solar system, planetary and matter state of it, is too minute to control the Sun. The size of the solar system is not dictated by the Sun in a way, but it is dictated by the fields of the other structures outside it, which they allow it to expand into and control.

If we suddenly fall into a lighter field strength in what you call, our galaxy, if there is such a possibility, and suddenly our boundaries expand beyond, to fill up the gap, which is now it has encountered, and the whole of life existence, planet system, within second will disappear. We are freaks of accidents of the Creation. You know when you go into, on a plane, and when you are flying, you suddenly they call you, you will get, jump in the hole, or turbulence, and you just go, up and down, or loose. Always imagine what happens if a solar system, or our Earth, (1:36). inside the solar system, hits one of these troughs, or one of these low field forces in the universe. How much will it drop? Trillions of kilometers. And if in that position there is nothing to control it, on expansion, the size of solar system doubles. So our position in respect to our Sun changes, and within seconds there is no life.

In some tests I have shown this, and I've shown how it becomes. Maybe in the future we replicate this test and you will understand. We are soon going back into labs and I think life will be very exciting for us to go back into these laboratories and development of new

technologies for Space and everything else. And you will see a different sides, and we can replicate a lot of these conditions. Because we have the knowledge that we have moved into a very, very advanced stage of interaction of the fields and creation of dimensions.

Any other questions?

Q: ... Astral travel has been practiced for a long time by the physical Man. Is this astral travel done by the Man a separation of the physical and the Soul of the Physicality (STP)? (1:38).

K- Explain.

R: Well I suppose Cristiano would have to define what he means exactly by astral travel. I suppose coming from Brazil it might mean Shamans for example, claim to be able to travel outside of their body and go to other places, or other dimensions. And he's saying, is that separation, that travel, astral travel, done by a separation of the physical or physicality perhaps, and the STP?

K- It's not a separation, this is not separation, it's collaboration, cooperation. It's far from separation. When you can control, maintain, or operate. And this is the beauty of the knowledge, if you can do it. And it should not take long to be done.

Any other question?

You can take a drug and go high, which most of these people do. And then you can dream anything.

Q: ... (1:40). I want to work on mathematics and mathematical formulation of plasma. Do you think the plasma processes of the Keshe Foundation have been mathematically modeled yet? From Gans formulas to other applied processes?

R: So, he's interested in working on the mathematical formulation side of plasma. Is there any work for someone like that? The way you... You haven't given us too many formulas exactly for plasma.

K- I always said, "have you ever seen God putting, measuring things, and mixing together, and making a solar system?" Everything is accidental, coincidental interactions.

Let me explain to you, why it cannot be done. It's in a very, very simple way. You cannot, if you understood the process of the Keshe Foundation work, as a plasma, as a Gans, as a field, you cannot find two similar Gans's, I'm talking individual Gans's, with exact, specific characteristics at the same time, in the same place. It's absolutely impossible, it doesn't matter how you turn it. Now, how are you going to write a formula with... on... about something which you have no control over? You can say, "okay, I put one drop of Amino Acid (AA), I put one drop of Gans of CO₂." (1:42). Excuse me, how

many Gans's are in that drop? Would it come to the time when we can count the Gans pieces in a drop? But then there is another problem, sorry, they don't all have the same energy. So, writing a formula for Keshe Foundation process of fields, you can try, it'll be very interesting. As much as you can stop a woman shoe shopping, you can do what I call, calculating. It's impossibilities.

Because the... we can work within a frame, try to create a condition within a frame. But, in that framework, you cannot even dictate. It's all in the hand of Creation and create, what you call, creation of the fields and interaction of the fields. This is how the universe has been. Opportunist and at the same time, with no control.

I said once, do you know why the universe and all the Creations you have, they're spherical like a ball? Because God loves to play football. And the footballers are the best opportunist. So, it's impossible, we cannot formulate it. If you understand the principle of the work, it's impossibility to formulate anything about dynamic plasmatic fields and the rest of it. (1:44).

You will understand this if you go back. I don't know if you even can find these papers anymore. Russian scientists in nineteen nineties and middle ?? end of nineteen eighties, start making computer programs and assumptions, how vortexes of magnetic fields of matter state, are created within the Sun, and they went all the way to the center. I have these papers somewhere, I've collected, because it was very interesting, how self-centered became the whole structure. How, actually, fields of, or what you call it, vortexes of the Hydrogen or Helium, build themselves into the center of the Sun, and then by compression of the center, they create that elusive fusion to go out as a field. Which is a lot of nonsense, if you understand it.

So, what was interesting for me, how did these people calculate what's the strength of these fields. How many Hydrogen pieces they consider into it. But it was very nice the imagination they used to do it. And it's impossibilities. Because every atom of Hydrogen, depending on its environment, depending on its strength, at the point of creation, and how long it's been created, .. what is given or taken, has different field strength. It's impossible, if you truly understand the work of the plasmas. Because you cannot repeat it. Something is calculable, if you can. You cannot repeat it, because the next Gans you made, (1:46). even you use 100% Copper, has in it a different atomic structure of isotopes. And these isotopes in the pack you put, you put a one drop, how many of these isotopes are in there? You cannot measure it, and you cannot feel it. So, if you've been with me enough, long enough, you know, I work on average of, it does what it's supposed to do so, it has the fields. We cannot calculate it.

In .. 2008, right now, in August, September, when I was in Sharif Tehran University laboratories, building the first flight systems, first what we call dynamic power generators. This became a discussion between me and the Iranian scientists. They said to me, "you open your reactor, a few times a day." Because those days we had these, and now you all know, was the radiation source from the smoke detectors we were using. And I never used gloves on these things, I just picked them up, put them back in and then

I created the activation for them. (They said), how does this guy works with radioactive material without anything, because I don't absorb it. And, I built a sense of where to position these two or three hundred, what you call it, radiation sources, in what manner, to get what field creation and what direction of motion (I wanted). And, I never relied on that, we do it this way.

I relied on what I could see, physically the fields will create, ionization and everything else, fields of the plasma, and I could say, (1:48). "okay, you've seen it, the big ball, how this ball will, what you call it, will move. Will it move to the left, will it move to the right? Would it, what you call, spin out of control?" And, this became a game for me for weeks in Sharif University. And, I used to open a reactor, move some of the sources to one side, and then close the reactors, it wasn't just opening and closing, it was all these silicon seals I had to use, and screws and tightening and everything else. Used like what, an hour, two hours, to actually get one system set. And I used to take the glue off the back of this radiation sources, move them in slightly, and I could say, "okay, now the system has to fly in the left side at what angle." And then we turn the system on, and we actually get it. And put this way, we were correct 2 out of 10, if we were lucky, but then we start to mastering it in more deeper, We became like 3 out of 10. And even that, 2 of 10 was a bit dodgy, but we could now dictate the position of the, what you call, rotation, or rejection.

We could not calculate, it's impossible to calculate how plasma will interact. How plasma will manifest itself, it's impossibilities. You cannot write a formula for the "Knowledge of the Creator." He didn't come up with a, what you call, a formula, why man is trying to do the job he never wanted Himself to do. Otherwise, you know, when He created the Earth, He would have dropped a letter in (saying), mix this, you get this, mix that, you get that. (1:50). He didn't do it, and I don't think any of you ever, with even the fastest computers, will be able to establish such a thing. It is absolutely impossible. It's far from it.

Try. I have had this discussion with many theoretical physicists. You can't put in a formula, it doesn't mean exist, it cannot exist. I said, "I put it in a system and it works." So you write a formula which you don't even understand. It is not easy task, but it's literally impossible to write a formula. And you can repeat it. Once something is repeated, can be repeated, it's a technology. And we don't have knowledge to be able to repeat. Because it's in nature, it's a natural process.

I used to have a lot of laugh with this in Sharif Tehran University. And it was, as I said, it's guesswork, but seeing how your guesswork is and understanding what you guess, not just doing it. I would love to see if you can write a formula, and (if) you can repeat it. (1:52). That that formula can be used to repeat the same process. Good luck. And I really wish you the best. If you can do it, you have found in the solution for ?? I think the Creator would love you. Then He can say, "okay, repeat this, you get the Earth. Repeat that, you get the Moon and the Mars, and repeat that, you get this and that." He didn't do it. I don't think man will have the command of his knowledge to do it.

When you look at these two pictures, When I open up, it's exactly as you see it. These are the two reactors built just about 15 years ago in Sharif Tehran University. Originally, we built the left one. And the left one, the top part, is the one which flew for the first time. This is the first plasma reactor ever, took off the ground, the top part. The bottom part we had to rebuild, because the bottom part, it just blew its bottom. And we had to restructure it, and rebuild it. And, what you see, exactly on the other side, the small one, is the Moon side, or is the Earth. Inside these reactors there is a structure, a specific structure of reactors, in both of them. And, the left reactor, the bigger one, doesn't move. It's impossible, when you put these two together, (1:54). to get the bigger one moving. The smaller one always moves.

So, by putting different radiation sources, on what I call, let me see if I can do something here... If you look at the one on the left, the bigger one, the bottom side is a tank reserve. It's literally a tank reserve of elements we want. There is a specific ring, which is not here now. It's not in this one. This ring was a specific field separation. It's a specific steel, which Iranian government overnight shipped from Japan to Tehran for us to be able to put it in. And in this, once we put the ring, and the inside is specifically designed that the fuel adds up to the top as it's used. As we consume, it converts it to plasma, we call in from the reserve tank in the bottom. The top side, the dome, the half shape, is inside, has reactors, inside has a different proposition of work. Knowledge Seekers who work with me in the, in the San Sano, they opened this up, and they know the structure inside more or less. And then you see in the background, you see a little brownish thing in the back, this is the cooling system for the motor which was in the vacuum. (1:56). And what you see, cover up dots in the front, black dots, these are, again, what you call, the control systems of what we needed to change the charge.

If you see on the top, there is a pipe coming up and it's in different shape or direction, you could change some of the compositions to create different field of radiation. And inside, there are some 350 nuclear radiation sources in it. So how we move these radiation sources, and where we put the units on the right, we could decide how the right reactor will jump off and fly. You have to understand, now you see a framework. In Tehran test, this didn't have a framework. It was standing free on its own. It's like a moon rotating. So we fill it up. Now, in this small one, we again have another thing, 240 radiation sources, something in that region. This is, again, multiple core. Both of them are multiple core. They are not single core. and cores are designed, if you... Still some of them is an original work, still in the labs in Austria. We added materials to it, inside it, we took material outside it. Then we could dictate, randomly, and when it happened, "oh, I was over the Moon."

And, we created a field in the big one. That the field we could see expanding beyond. We created a field in a small one, and we waited to see where these two fields touch, interact. (1:58). You could see a small vibration, always in the small one, and then it just flies off. Magnetic field forces of the bigger one, push the smaller one off position. And then it was a, what you call it, a "baseball game," "catch the ball." You got to understand, this thing when it used to takeoff, it has I think 12 screws, sharp steel screws. Try to ?? catch a "baseball" with 12 screws rotating at higher speed. I cut myself many times with it.

But an interesting point for me was, the lab is big. We never hit the glasses (windows) of the lab. We used to, we had a long table in the center, and we set this thing up. But the little ball, you see in the front, on the right side, even though we managed to fly some of that, we hit the ceiling once or twice. We managed, we fell on the floor a few times. We couldn't catch it. And it was impossibility to calculate. Even we. The radiation system inside was lined. We moved the line by half a centimeter in one direction, twice we got it the way we wanted to go. The other eight times it flew the other way. We could not calculate it. But at the same time, if you look at the small one on the top, you see pipes. (2:00). We were changing parameters to see how rapid these two reactors can fly away from each other. So we could create and control the intensity of the magnetic fields. We could never calculate it.

I'm sure Iranian scientists sat down, "bang their head" to it, to do it. And when you look at it, this small one, is the first proper flying nuclear power generator system. This one, after it took off and it exploded its bottom, we had to rebuild it. We never allowed it to fly again. It's too dangerous. So as one of the professors from the Iranian side said to me, he said, "Mr. Keshe, you came here to build the small one. You didn't come here to build the big one. And you got what you wanted." We had inspection. We had scientists from Iran, armed forces, military, Sepah, and all sorts paid a visit continuously to see the development was the next step. Even at night, when I used to call, used to ?? markets, was there, obviously, at night. They were coming in and checking and trying to understand it.

And if you understand, if you see this reactor, This is the same reactor that Netanyahu claimed to be Iran nuclear bomb. And we "washed it down the drain." He's been on the television convincing his pal, "Mr. Trump," that the Iranians are building, and this is a nuclear bomb. And this is ??. Yes, it's a nuclear based flying system, Mr. Netanyahu. And we are proud to announce. To extend it beyond, Iran military forces in Space are beyond the imagination of the man. And we respect and salute them, (2:02). for the integrity of not crossing Iranian borders with such a knowledge, but defending Iranian territory.

This is, that you cannot replicate fields. I am master it, but still impossibility to do. The next generation which we are developing will have a different effect, different position, different things. But, in essence, most of, most of the work is understanding and being able to repeat that position.

And the new reactors, the new style of reactors in the systems you came in with, takes off a lot of things out of discussion. You've got to see. If you look at the big reactor, it's actually a UFO. It's the shape of a UFO with a tank reserve. If I reduce the capacity of the reserve tank, closer to the top, what you see is more or less a UFO. The reason we brought this in, the reason I devised this and built such a system, because we did a lot of tests in Belgium, before I go to Iran. So when we are in Iran, we had a lot of clear idea how we're doing it.

This will not allow the turning of the reactor. We understand the field flow, plasma field strength, can create flipping. Because it happens on Earth, (2:04). it happens on the Sun. And the Sun magnetic field flips every 11 and a half years, every 23 years, goes back to its original position. When you build the system like this, you understand a lot of things inside it, doesn't allow flipping. That's why you can go with high speed, like a UFO. This system does not give you that possibility. It's absolutely loose, but it can reach saturation, it can reach current saturation, the current saturation in plasma is worse than plasma saturation. Because, and most of our scientists don't even understand this. And current saturation in the brain of the man, brings Parkinson's, epileptic. And we understand this, how to control it. In the flight system, brings disaster.

So, when you look, and you try to send, calculate a formula, you understand it's impossibilities to them. But, if you become master in it, you can approximately use it. This goes back now to the more advanced systems, which now you all come, or you came to, what you call it, to Linz. None of you saw any spherical ball on any of the machines. Because now we have gone into what we call, Book number two, transmutation through light. The cylindrical, what you call, plasma field flow. Which is, none of you will "have a clue" how it exists. (2:06). And this is why it's a different story.

Now your Soul is the "big ball," in a way. And the little Soul (reactor) is the STP of you. And if I play with it, you will see shimmering of lights, manifestation of the structure, somewhere, as you see, on the right in the escalator. I can give it manifestation. I can give it physicality. And you actually, physically see it. And the system is inside.

This is what we did with you when you came to Linz. Blurred eye, you could see blurred, because the Soul has expanded. Cannot be formulated. But, there is one common denominator in all of it, if you understand it, then you can structure it. It's impossibility to write formulas. Because no energy system is the same. That's why God gave up and said, "I'll mix it, whatever comes up, it'll come and what it turns out, to be Earth." He couldn't control it, he couldn't write his formula, I don't think you'll stand a good chance for it.

These two reactors have a beautiful history behind them. And how they were built, and how they became, and the latest controversy we've seen, the use of it by Netanyahu, the most evil man on this planet. Using a space reactor to be a nuclear bomb, trying to find, to gather forces to kill more. (2:08). But in essence what you see on the table is the way universe works. But you cannot formulate it, we have to understand it, to get the desire of it.

Any other question?

R: Mr. Keshe, I found the video that, where you actually show those two units and talk about them, would you like me to play that, or are you done with that?

K- ??, from how long ago you are going back to, years ago.

R: Yes, this is way, way back. Back in the days of the Spaceship Institute in...

K- When you and I were ?? around, yeah.

R: Yeah, when, back when I was there, just around that time, just after that time, I think, this video. Okay, if you think it's fine, I'll play that now.

K- Yep. Yep.

<< Rick plays old video of KF about KF reactors >> (2:14).

K- Thank you very much. That brought back a lot of memories, Rick. This was done in the education side of our home, in the San Sano. And it has brought a lot of changes. We see the development and delivery of the next cycle of what I call, space flight system to be done in conjunction with the Iranian military and Chinese military in the space in the coming weeks. It'll be amazing to see how technology, even being the same, has leaped forward by hundreds of years in 10 or 15 years. (2:16).

We, for example, in this configuration, you saw things going on the floor. And it was the beginning of the setup. Later on, in tests, we managed to create 129 Tesla. And then, in the same lab, every night when we ran these systems, when we switched off the lights, the fluorescent tubes on the ceiling, used to dance, used to switch the light up and watch how the fields from these reactors interacted with the fluorescent lights. And we had a light show every night, more or less, for 5, 10 minutes, till all the plasmas in the room were used by the tubes.

If you look in a deeper way, at the moment you see these pipes, the blue pipes going in. The new systems which will be introduced, will be controlled by thoughts. It means, "what I do, what I think, I'll control." In a way, you call it interaction of the Soul. And it'll be interesting to see how it will change the characters of the people around it. It will be interesting to understand how this feels, if you understand it now, there is a third reactor already on this table, which is the Soul of the presenter, which at that time we could not explain to discuss. (2:18).

When you look at the star formation, the STM is an operating ?? life (live) system in that system. It's a controller, your emotion controls a lot of it and a lot of people could not understand, still cannot understand. But now that we have shown the working of the systems in Linz, a lot of you understand, you are the Sun when you sit in that system. You're not just a Soul. You, when we put you in the Head Units, your Soul is the Sun, it's the dictator of the whole thing. The expansion, the control, it's totally dictated by it, and it's emotions. And it's the same with here. That's why many tests I did, it could not be replicated. Because I cannot explain, I'm using the power which is within. As I said, man is too physical.

You see this, the new, what we call, Space Center, in... of the Keshe Foundation. When you sit in these units, even the Head Unit, your Soul is the dictator of the change within your physicality. We will see many of these centers to open up around the world. The center and the system will openly shown in public in Macau, (2:20). what we call, conference. Where we allow people in the conference to personally test the system, the scientists from around the world.

And, it's interesting for the whole understanding of the creations within this system. It needs a wise man to see and a wise man to know how to use it. These systems as you see are more or less obsolete, compared to what now has been produced and sitting in... Most of you who joined the, what we call, July Session, were connected to that system. Only one part, these systems were connected to you and we saw a lot of you, shown a lot of emotion and changes, using this, in one of the sessions. All these systems were connected to all of you, when you were in the session.

And, if you understand the power of the STM, you have managed to achieve a lot. Thank you very much.

Any other question?

Q: ... (2:22). I have a question about our solar system. There is an asteroid belt between Mars and Jupiter. Was this a planet in the past? Can you tell us something about it? Thank you very much.

K- No, asteroid belts and all these things comes from the condition created, and has the Inertia, plasmatic field Inertia to not only trap, but create materials which can sustain that Inertia. And it's between all planetary systems. It's the face of.

When your Soul interacts with your STP, and with the Inertia of the environment of Earth, makes your body, your physical manifestation. So, all these asteroid belts, when you see them, when they talk about it, now that you understand the knowledge, is the interaction of the two fields, what it creates. Don't forget the Inertia in that case, when you see them, is the Inertia of the field, or strength of the Inertia of the plasma of the solar system. So you always have that. And these belts we see them, brings, you call it, the belts, asteroid belts. The same thing in another version we call it, the "rings of Saturn." It's no difference. It's exactly the same thing. And depending on the strength, it manifests itself in different ways.

Many of you, I've seen this so I can tell you for the first time, (2:24). maybe you will laugh at it, but soon you will see it. Many of you, when you go through a transition, you'll see your head but you don't see your body. You go through a transmutation, because the field of the environment you're in, is different matching to the physical Soul, and it's like you see half of the body. The first time we saw this was hilarious. And we saw it again with the disappearing of the hand when we were doing tests with Ali in Canada.

And the reality is, each field interaction between two systems, creates it's own, what you want to call it, a belt or ring. And it's usually is on the strength of the two fields, because it's like a funnel, between the center line fields, which is more balanced. So, there's nothing different, is a manifestation of two fields interaction, this, one of them call it, a Soul, one of them we call it, the STP, and the Inertia environment of the solar system, that allows to create a condition, that in that condition, call it a ring of Saturn, we have it around the Earth. Around the Earth we have such a belt, it's very, very faint. And most of our meteorites get bulleted through that part. In the dust you see, comes from this point.

And it's just fields convert to matter and then now, depending on gravitational pull of one or the other, they shoot inside the ?? (2:26).

So it's nothing new, with the knowledge you have, you should have understood that straight away. And many of you, you will see it, again and again. It's the natural characteristics of a spherical field interaction. If you adjust it, it can become liquidish, If you adjust it could be solid, you could, then if you adjust again, it could be different size of blocks, or whatever in those belts. As we see with the ring of Saturn. Read the paper I've written about the creation of ring of Saturn. And these things are answered immediately by all of you.

Any other question?

Q: A question Newton had back in the day ... Why does the apple fall from the tree? Is the apple magnetic?

K- Oh no, those all to do with inertia and the rest of it. Can you imagine where science would have been, if he wouldn't have fallen asleep under the tree. And it was a time when the apples were falling. Where would the science of man be today? Thanks to the apple. (2:28).

R: Well we had a little short discussion about that in the Plasma Group, that what if instead of figuring out all the laws of the apple and the Earth and all that stuff, why didn't he cut the apple in half and have a look at the construction of the apple, which is very interesting in its kind of a vortex shape inside, as well as the way the seeds and the inner core, literally we call it the core of the apple. It is a reactor with its own core.

K- Yeah.

R: It's similar to other reactors in the universe. Maybe we could have gotten into plasma technology, instead of all the, the other nonsense that's came, come from the gravity. We still don't know what gravity is, in terms of the scientists of today. So, they have all the formulas though. They do have the formulas, but they still don't know what it is.

K- Yes, but the formula is because you have a solid mass, you can measure the mass. Formulas goes through the window when you have a plasma. It's a big difference. This is why us, as Knowledge Seekers, "have to always stay on top of it." We're dealing with two different entities, and both of them are real. One is a plasma, one is a matter state. If you understand this, we see a lot of steps forward for humanity and his knowledge.

But, we cannot ridicule what man has done. That's the matter state, we've done the best we could. (2:30). Now, we look at the energy, what we call, plasma. This, the matter state is the world of the man. Plasma is the world of the Creator, and Creation. And the sooner we understand this, the sooner we will overcome these dogmas of science. We cannot laugh at them. They went wrong. They didn't go wrong. They are right in the

matter state where you can measure everything. It cannot be done in a plasma state where it's just fields.

I taught once this to a Knowledge Seeker. He tried very hard to make a consistent, what you call it, Gans. That he can do a specific test. I said, "you know what's your best choice? Is to dry it." And then when you dried it, try to understand how you measure the fields, and then count the number of Gans's in your dried pack, and then go back and do it. In the future maybe we'll do that. Even today we have knowledge to do it. And maybe we come to nearest, because not every Gans drop is the same.

But, in essence, we have to always to be on top of us, in ourselves, in knowledge. Which world do we live in our schizophrenic life? The energy side, or what you call it, the matter side? (2:32). In a way, if you look at it, the energy side in slowing down, or not slowing, reducing the strength, become matter state. So, even the matter state is still the energy. So, we have to understand, which state of fields interaction we're talking (about). Manifestation of it, or still loose as fields.

I always explained it in a very, very beautiful way. To me it has a lot of meaning. Is it love, or is it the lover? We cannot quantify and explain the shape of love, but we can explain the shape, the color of the eye, the hair, the leg, the arm, whatever of the lover. Does love live, exist without the lover? And can we explain what love is, if we don't understand the love? And this is the dilemma man has with the matter state and the plasma. If you understood that, you understand this. Otherwise, respect both. Because you still say, "I love, but I have no lover to love. I have a lover, but I don't know what a love is." And this is very common in Chinese. Chinese tell you they don't know what love is. But there is a lover. You have to appreciate both, to understand both. And this is the position man is today. We have had many lovers, but we don't understand what the love is, and we call it, plasma. (2:34). Because we can tangibly touch the love. And this is what, as Knowledge Seekers, we have to understand they both exist, and one cannot exist without the other one, if you're going to enjoy the creation of the Creator.

Any other question?

Q: ... After the addiction session of last April 27th, I was a lot connected to my Soul and could remember many of the Soul interactions during my sleep time, day and night, every day. Three months later, I lost the connection in a way and can barely remember time to time interactions. Why am I losing the connection? Is it because I went back to increase of my food consumption? And what can I do to maintain that connection?

K- It's like to keep fit you have to exercise, isn't it? You got lost because you had it. That's all it is. Once you learn it, practice it. Don't let it go, till it becomes second habit. And then you'll see a lot of other things. And this is part of what we need to understand. Once you learn it, don't let it go. Practice it. And then it becomes more and more perfect and everything else.

I've said many times, 99% of the time, (2:36). I have had, especially when it comes to sleep time, am I asleep or am I awake? They tell me I snore the whole night, good. But to me, I'm there, I'm working, I'm putting things, I'm testing, or understanding. But, physicality has gone its own way. It's repairing itself and "I am snoring half of the time." But to me, I'm awake. And they say, "oh no, you cannot be, you were snoring." I couldn't because I'm literally working. And I know what I've done, what I'm doing, and what is in the middle of... When they let me go, I go back to what you call, physical sleep, but actually doing what I was doing. There's no difference between sleep and life, for past, God knows, years and years for me. But somewhere down the line, physicality takes his rest.

Q: ... What does it mean when during the sleep time it shows you a huge family verbal fight? Does it mean the Soul goes also for fight?

K- It's the habit of the man, isn't it? I always said, when you fight for something, you have already lost. When you fight to keep a lover, you already lost the lover. When you fight to keep something, it's already not yours. Otherwise, you don't need to fight for it. So if you, in your dream, you fight, find out what you've lost, that you manifested it as a fight. When you see two people together, couples or whatever, watch them, (2:38). why they are fighting at each other all the time. Because they already lost the love, it's not there. Because, if it was there, they wouldn't fight for it.

Last question, and I have to go.

Q: ... I'm pretty alright, but there's something that's niggling at me in the need for understanding about Iran's position. ... Now, if I'm correct in understanding, The Iranian people have a problem with kingship of other people in nearby neighbors that call themselves kings, and they have a problem with the kingship. But lately there's been a new way of thinking from both sides. And this has changed everything. And it may be a geopolitical question, but how do you think that things have changed? (2:40). And why Saudi Arabia just suddenly decided that, knowing both sides of the equation, that they would come closer to them?

K- You mean with the Iranians? I'm going to put it to you in two or three different ways. There is a reason for it. First of all, Iranians are not against the kingship. We are a kingdom. We've always been an empire. The first time in the history of Iran in past ?? 40 years, the foreigners took over the Arabs, what we call, the "Ayatollah side." The most of the first years of Ayatollahs are not the Iranians at all. The two brothers heads of the parliament of Iran, and the rest of it.

The opposition or what I don't accept personally as a kingship, is that there is nobody higher than the other. So it is not the Iranians. Iranians are king lovers. We always had kings. At the moment, what you call it, the rule of "gun and swords," and Arabs who are ruling Iran. You saw the uprising of past few months, and you saw how the people were slaughtered. These are all Palestinians, people .. brought in from Syria. They don't speak a single word of Farsi. They are paid triple price to kill, to hold on to power. Would we

see back, .. a king in Iran? I doubt it. (2:42). Not at the present position. But it's not that Iranians, are not "king lovers." We are very much, very much, it's ingrained in our life.

But as a scientist and working at this level, I don't see anybody higher than the other, knowing the Soul's work, than actually the physical frock. But, in the present position with Saudi, it's a totally different matter. There is a new structure of work, which is works on a matter of peace, because economical needs are bigger than peace. And a lot of things happened in the past two years in Middle East, which pushed Saudi Arabia away from America. And the Chinese saw the opportunity, and brought the Iranians and Saudis on the table.

The original reason, Saudis did not know where to go, but on the other hand, they had nowhere to go. They listen to the Israelis, if you look in past 4 years, Israelis open relationship with the Middle East, the Arab nations and the rest of it, and everything else, and go back into news, they sold, I think, 100 million defense technology to Saudis, from Saudi, from Israel, to defend themselves against Iran, and everything else. And, when in January of 2020, Iran wiped out the American most advanced base (in Iraq), plus Europeans on it, with hundreds and hundreds of military officers wiped out. To defend the territory of Iran, for what was planned to attack Iran. (2:44). The position came, and I directly put it internationally, and it was passed on, and understood by the Saudis and Middle Eastern countries, if the Americans could not protect their most advanced base, from the new simple systems of Iran, which the Russians recorded, it's just black things moving forward and just annihilating the whole land. Why are the Saudis sitting there for? And buying these technologies, when the people who sell it themselves, cannot actually show any use for it, they couldn't defend themselves.

That attack in January of 2020, changed the whole structure of the Americans selling weapons, in exchange for keeping Iran out. Saudis were running with their heads in their hands, what a fool, but they made a mistake, and they gave the system back, and the Americans were kicked out of Saudi about a year ago. In their defense, what you call it, missiles. But on the other hand, there was a fear now, they don't have this, they don't believe in it, all these Scud missiles and the rest. China moved in and brokered a peace between the two. And Iran has a very deep relationship with Saudis. American exploited it to split it, "divide and rule" with the British. And now China has put it back in track. And we'll see more and more of this, because they're all making, what you call it, things out of it.

If you remember, we still own a website called CIBRU, which is China, Iran, Brazil. I set this up some years ago. (2:46). And we now see CIBRU taking shape in a physical dimension. Iran, China, Brazil, Russia have joined the CIBRU. Look Brazil in April of this year signed a specific contract in space development technology with China. Back of it, Keshe Foundation Technology. Iranian space technology is backed with it. So, we see what we said years ago, there is one left out, that you would end, which you put as United States, and there is a correction with it, I was explaining very recently to some Chinese and that is the rest of the "United Earth." Which means we share the technology with the rest of the world.

We do not consider America to be anymore on the edge of the space technology. Actually now you're at bottom of it. And so the CIBRU has taken shape. China, Iran, Brazil, Russia. .. This is what is in the news. We don't say anything because we just set up. We always put things in advance and we see it.

So, we see there is no need to spend 100 million to buy things from Israelis and the Americans Scud missiles which does not work, because the "devil" they made Iran to be, is not there, and you will see a massive trade relationship. But, the good things for the Chinese has been, in establishing peace between Iran, and Saudis and the rest of the nations in Middle East, they're guaranteeing their own oil supply and gas supply. (2:48). Because, the biggest consumer of oil and gas is China, they need it, so they have to play the tune of China. And the tune of China is peace policy. Economical growth is above "gun policy." Where America "gun policy" is above economical (policy), because we're doing.

Very soon, in a very, very short time, in the coming years, you will see Keshe Foundation in conjunction with the Chinese and the Iranians, we will move to eradicate seed control, GMO. It is already "on the cards," the structure is getting set up. And, when now we got rid of this "gun policy" of United States, we get rid of this "seed control policy," that no farmer in India needs to kill themselves and leave their children orphaned. And no Chinese will, what you call, farmers can live on poverty, because they cannot lose one cycle. The Chinese farmers in a very soon cycle, maybe even in the next year, if we can start it, will use the same GMO seed, but convert it to the natural seed, which means they don't need to buy seed next year, which is half of their income for the next harvest to live. It'll bring China out of poverty, especially a lot of farmers. Chinese have a different understanding of it.

And so, we will see the two things which brought mayhem and war around the world, and hunger, and literally hundreds of thousands of farmers kill themselves, because they cannot buy the seed next year. What they eat, that's all. Next year they don't have the money to buy. We'll change this with the collaboration with the Keshe Foundation Chinese, what you call it, scientific and farming community.

So maybe in two years time, three years time, in China we buy, what you call it, GMO seeds. But in the process, we take it out of the process, and become a normal seed. (2:50). And the farmers don't need to buy again. So this is creating a condition of peace. And this is one of the works now Keshe Foundation is involved in China. That seed policy, like the gun policy finishes, then we see nations can feed themselves.

From where we sit, I'm looking across the most beautiful city of the world, Beijing at the moment, where the teaching is coming from. We see China to become the breadbasket of the world, on the emergency, not for control. It's a big difference. America pushed itself to become breadbasket by creating wars, division, and then seed control, GMO. China is going the reverse, where we put the knowledge, we put the technology, we put the use, the technology, to show, to bring the farmers that the seed control does not exist.

It's literally, you know, you buy a poison food and you put something on it and you get rid of the poison. It's like a dirt, more or less, on the seed. We can change it through fields. And we have shown it, it has been done. And so we will see another "feather" of the, what you call it, the wings of American policy, gun policy and GMO policy. And this soon will stop.

GMO is needed for betterment of seeds, better harvest. But not the layer to not allow the next generation. And we have found a trick how it works. How you can buy GMO seed, grow your, what you call it, tomatoes, potatoes, rice or whatever, (2:52). and using the right structure, right field structure, the seed will change. Don't forget GMO is built in. It's like you, it's a frock. We can take it off. But up to now, we didn't know how. Now with plasma technology, we know. And the GMO is down the drain. It's for sure.

You will see the structure of the Chinese grows that way. But the food policy, national food security of China for the world, is that we all have. And if you want to bring comfort and peace, you have to work not only for your nation, but all the nations. And this is part of our work and signed agreements with the Chinese government. Our technology will not stay within the border of China, but will go out of the border of China for the rest of humanity, unconditionally. They didn't put any condition on application. And we have tested, we have shown how new position comes.

And this will help countries like Iran. Now we get rid of GMO, we can feed our nation. Arabs will come to the same way and the rest. And in a way, step by step, we are moving towards maybe another 5 to 10 years, that we can feed every man on this planet. And I said in the past few days, we were at dinner, with one of the most, with the people who run this country and I explained that, go a step further. If you're sending food, if you can transform food to people on the telephone line, we can feed nations on the telephone line. (2:54). National food security by holding grain in thousands of tons and controlling, is finished with the new technology.

And all your Knowledge Seekers know it, you put the headphones on. We tested it, we're testing more and then we see more and more how it comes. And as I said to the Chinese, we have found the code. Now we all have to decode step by step how we bring that position together.

Some of the targets of the Americans for most of the nations when they're going to war, which usually doesn't come out in public, is hitting food silos, national food reserves. But they never tell you in public. You don't do that to your dog, let alone to a nation. And with the new systems, especially what, like, what Rick just showed, into a new advanced systems, we can feed, if there is a disaster in the US, and we can feed them from China, with the service centers. Just put a headphones on, you want a "fish and chips," you get a fish and chips. So national food security and using food as a tool to control, it shows itself. This is the system right in front of you. We are testing it every day with you. This is the change.

Shall we call it a day? I have to leave.

Thank you very much Rick. Thanks for today and hopefully we meet you here. (2:56). We try to share on the, what we call, Thursday of the teaching from Manchester, that you share with us, with all the Knowledge Seekers who are present in the conference. We run a, what we call, open session and we hope we can share knowledge with each other at that point. Thank you very much Rick, and see you hopefully soon.

R: Okay, thank you Mr. Keshe, another great workshop here. This has been the 498th Knowledge Seekers Workshop, here on Thursday August 10th. Two more workshops to the magic 500th mark.

K- I think the 500th will be from Manchester. I think so, somewhere near there. Possibly.

R: That could be fun.

K- Maybe that would be fun, yeah.

498 KSW August 10, 2023

END
