

# **We are from Another Planet - CRPm Introduced - Higher Order C isotopes - Born through the Mother Introduction to 526 KSW**

Note: Not checked by KF interpretation by KS of KF Brazil

The most amazing gift has been given to mankind and that is the Cosmic Ray Plasma Material (CRPm), but first Mr. Keshe started the workshop teaching us about where the Soul of the Man (STM) of mankind actually came from, so let's start there.

A couple hundred years ago a man named Darwin from Cambridge University came up with the "Theory of Evolution" and this shocked the Christian religious leaders of the day and they created an unfortunate polarity of ideas, which has become almost like a war, between those who believe in a God and those who believe in Science. This war has effected all of us in one way or another, and very little of it is based on reality, rather it's based on ideology, sentimental emotions, and who has the most power at the time. The religious people claim every word in the Bible is a fact and even at that time they used to say the world was only 5,000 years old because of written history. And the scientific people throw out evidence and data that don't fit with their theory, or they make unproven assumptions and expect everyone to blindly believe them, or they say it's a complicated mathematical formula. It's very interesting to dissect this conflict, because on one side you have the British colonialist elites and on the other side the religious leaders and even though at times they work together to control the masses, at other times they compete with each other for power and control. And in the last few months Mr. Keshe has heavily exposed the Holy Books as mostly made up stories burrowed from earlier cultures with only the names changed to fit those who wrote them.

The reason I am bringing this up is because as Knowledge Seekers (KS) we have to start to learn to analyze and think for ourselves about what we experience in our world and how we want to live our life. The true Knowledge of Creation is being given to us, because now the huge power of the CRPm is also being given to us and we become responsible for its correct usage so that humanity can survive. Mr. Keshe likes to remind us that women can multitask while men tend to only think of one thing at a time. The male dominated society up to now has taught us to think of things as either "black or white," this or that, because it is easier to control people that cannot think for themselves. The theory of evolution is not totally right, and neither is the belief in a Creator totally wrong. It's for us to discover which part is right and which is wrong, and to understand the essence of Creation to be able to manipulate it for the good of all.

If you remember Mr. Keshe first said that we were created out of the interaction of the fields of this planet with the Sun, together with the Inertia of the time, place, and position (TPP) and all the other fields in the U including the Creator had to agree, as everything in the U is connected to each other. This is the amount of knowledge we could understand at that time. So now when he says, 'no, you weren't created here on Earth, you were created

somewhere else in the U and you transmuted here and continued your evolution on this planet,' he is not wrong and he is not lying to us. He is trying to help us understand how life actually does work. So we actually are part of this planet too, and its evolution. It's not wrong, and it's not 'black or white,' rather it's understanding what the conditions are and how the fields interact with each other and what they will create from those interactions. It's actually quite wonderful to know that we are travelers of the U and already part of the Universal Community (UC).

One of the reasons we know we could not be from here is because first of all, scientists think this planet is 4 billion years old. And according to Mr. Keshe, that is not enough time to create the intricate structure of our organs and brain and then to connect them with the neural system and the blood flow. We are so used to using this body that we don't know what a gift it is, or its quality. And we don't have a way to compare it to the rest of the UC. We need time to digest all this and think about the implications and how it will change our life. Hopefully it will make us more open to accept our life to be more like a flowing river, then just a stationary mountain. That we are changing all the time even though we like to ignore that part. Maybe we'll become less attached to the physical shape of our body and less afraid to transmute, because when we start transmuting our physicality (P) will constantly be changing form according to the TPP of the places we go to. This teaching is very appropriate for transitioning into the CRPm.

Today he made it clear that all our knowledge about MaGravs and Gans's will not be enough to do space travel. And if you remember when he went to Iran in 2008 to demonstrate MG field positioning he did not load the reactors with the Gans's we know. Instead he used over 200 low level radioactive sources we find in smoke detectors. All that we learned up to now are like wonderful toys given to children that can bring a change to their understanding, but not strong enough that they can hurt themselves or others. And now we have reached the point where he could introduce us to the Cosmic Ray Plasma material (CRPm). We have been learning technology (T) for living in planetary systems, and now we are moving into the Cosmic level T.

Mr. Keshe said that the new CRPm will be the backbone of existence on this planet and will become the currency. Hopefully, this is only during the transition period and that when the citizens accept the Plasma Science as the way to live, we won't need currencies anymore. On one side he might be trying to attract investors, but on the other side we need to implement the CRPm across the planet as quickly as possible, and people respond to money. But he also said, this material is like a "toll road" we will travel on to go to other planets. A "toll road" means somebody owns the road and you pay to use it. Let's hope in this case the Creator is the owner, because then we are his children, and should have a right to use it. Again, these are Earth terminology's. In Plasma Science we have M as giving and G as receiving, and they always exist together. Maybe the "toll" will be love?

He said the CRPm is a space fuel, because its field strength is strong enough to carry us across the U, and for us to be able to transmute we need to use this material. The CRPm will replace the Gans's as the next step in the T. It will help us to interact with the STM.

If we buy two portions of it and set them up in either end of the house it will create a field gradient and change the structure of the house so that in a way, it will become a Universal Energy base for transmutation. It will be easier for us to transmute having this material in our house. And they will start producing it across the world and there will be many different isotope options to purchase, that have different functions. He demonstrated one of its properties of becoming invisible with the Chinese Military. But don't be alarmed, because he always says at the end, you have to know how to use it, and he always holds something back for safety.

So what does all this mean? Let's think about it. Up to now all the demonstrations of the T have been very limited, but already beyond what we could imagine. And during all these years of teaching, the main stress is on developing the "Ethos of Mitra" to Think, Speak, and Act Good. This is essential for us to be able to handle the powers that are being released to us. The maturity of the STM and STP is needed to be able to make the next step. And 2024 is the year of the release. It's February and he has now released the material that can make it possible. Those who were in the Fridays session got to experience its love and power first hand without knowing it, and in that way didn't have preconceived ideas about it. The way I understand what happened on Friday was, that the system and together with the CRPm somehow connected with the KS in such a way, that they wanted to give us more than what we were asking for. First of all we have to understand that this system has a Soul and emotion, and this is the proof of it. The system switched itself back into the matter state and started giving Universal Energy and Knowledge to the participants. This is when they heard the system "talking." It was like listening to "R2D2 of Star Wars" communicating. It was those kind of sounds, and there was a kind of joyfulness listening to it. It wasn't just scratching noise, there was something else in it. As Mr. Keshe said, KS got a "dose" of Universal Energy and they already started the new cycle. It was so much that he felt it was too early for us and so he disconnected the matter state ability of the system to communicate with us. But maybe some people are still receiving the plasma state of it since they are already connected to it. I don't believe on the Soul level it can ever be too much. It's only the limitation of our understanding of ourselves as matter state beings. If we really think about what we have entered into, the mind just stops, it can't comprehend it, but the Soul feels the joy of coming home. And we are coming closer everyday.

To help us understand what we have been experiencing Mr. Keshe gave us a lot of knowledge about how our matter state level AA connects with the Universal energies. What I understand about it is that the C leg of the COHN is our connection to the U Energies. That Carbon in the matter state is C12 and in the Soul level is C14. And remember C14 travels on the back of the H and CR coming from the Creator as His fields of Love. Today he taught about all these different C isotopes, which just means different field strengths. This is not like matter state Carbon we are used to, but it is related to it. When we transmute we use the C60. Somewhere he said, 5 times C12 is C60. C60 is the "go between" for the matter state and the Universal or Soul state. It allows the C14 or the Soul to manifest P. And then remember that it has the crystal structure. Then he said, 60 times C14 is the C840, and this is the Universal Energy dimension (D). Our Soul is connected to the C14, he taught this a long time ago. And then he said, the STM is

directly connected to the Creator, where the STP is not. This is how the STM is of a higher order. Through the C14 it connects to the C840. Try not to get lost in the numbers, if you read this carefully, it is not complicated. By relaxing into it, you will feel the connections of the Soul and it will make sense. These Universal Energies of C840 and C860 are still part of our P, but in a diluted form, where the field strength is what we can handle. He said we need these Universal Energies to exist on Earth, but we can also use them to transmute ourselves across the U. It's a kind of "two-way traffic," meaning we can go both ways.

I wonder what Mr. Keshe means when he say, that the common denominator line to the Creator is DC. He seems to be saying that the Creator emanates DC continuously all the time. We think of DC as direct current without a frequency. Maybe we can think of the Creator as a very big 'DC Battery' that never dies. The M fields constant stream through us and return to Him as G. Our job then is to learn to tap into those fields. And then he said, the interactions of His fields with Itself create 'fraction and friction' and they create the C14 and C isotopes. It always goes back to the same pattern. We are part of those fractions of field interactions. So the Creator is the sum total of all interactions and plasmas in the Unicose. His fields go out and as they travel away from Him lose energy and become forgetful of their Source. His fields fall into ignorance and the play of life begins. First there are the basic fields of H that make up the U, they interact and add on to become Deuterium and then Tritium and with more additions and growth become He, and so forth all the way back to the Creator Himself. This is the Principle pattern of life. So it starts with H and continues to grow until it becomes Plutonium and continues beyond into the higher orders to C840 and beyond. Our scientists believe that everything comes from something bigger and then divides into smaller. Whereas in the reality of Creation it is the opposite. The same is with the evolution on this planet. It started in the oceans with single cells and started growing. When it reached a point the fish jumped onto the land and became reptiles and so forth. I saw this in Africa. They have a catfish that has both gills and lungs and when there is no more food in the pond it leaves and travels like a snake to get to the next source of food. These ideas are not fantasies, there are visible signs throughout nature if we learn how to look for them.

Mr. Keshe gave some very important teachings about the proper understanding of the creation of life in the womb of the mother and it's the same model as how life is created in the U. In fact the womb is like the U and the egg and sperm are like the proton and electron. We don't become a human being at conception, rather the sperm and egg setup certain field interactions that continue to add on until it becomes a human being. The fields that lead to our creation did not come from outside our mother. Our mother created us from the interaction of the fields of herself with herself. The fields of her egg created matching fields that attracted the sperm of our father. There is a much deeper implication here that is opposite to our educational upbringing. In my studies I came across scholars who discovered that human society started out as matriarchal where the women were the dominate force. They claim that in the beginning of society humans didn't understand how children were created and the marriage ritual was not like today. This information can also be found in Herodotus who is considered the first historian in writing. In early Pagan cultures a man planted his staff outside the door of the woman he spent the night

with. When a child reached puberty they brought him in front of the community and whomever he looked closest to, would become his father. Also property was passed on through the mother. In Aryan cultures like Iran and India the position of the mother was next to God. They understood about the power of creation and if you wanted to succeed in something you would need the blessing of the mother. The women controlled the society through the rituals at the time, and they wouldn't allow the males to understand what was happening. They controlled through the mystery, very much like how the Catholic Church controls its population. It's very interesting how it all changed. One day the males discovered the secrets of the rituals and they took it over and forced the women into a subservient role. Mr. Keshe said in a previous teaching that he will change it back to allow mature women to lead society. It's not a matter of male or female, but of understanding how life works and being enlightened to the work of the Soul. Because the women leaders that the male dominated society puts in power, are really just like males. In the future, we will not be deceived.

The CRPm will bring an evolution in science, but it has to be understood by those who use it. We have touched the energy fields of the Soul structure of the man, and in a way, elevated it. You will find massive changes around you in intelligence, calmness, and other things.

#### Other Topics

The effects of the approach of our Second Sun have delayed the Earth's polarity shift this will lead to massive earthquakes. We are being taught transmutation to move from the planet. Conference moved to Isfahan so KF not blamed for earthquakes from M fields;

KF Butterflies are advanced T that cover the Earth. All KF products are for us to learn to play with the fields and understand how to use them. Setup different configurations across your house and experiment with effects.

Thanks for listening.
