

Importance of Light - Photon & Ray - Universal Light different than Solar - Gaza Release T - Mehran Introduction to 527 KSW

Note: Not checked by KF interpretation by KS of KF Brazil

Today's workshop is in a way, a teaching about light in the matter state, and plasma state M field energies, and how it relates to the Soul in terms of what we call enlightenment, knowledge, or understanding. First of all, our scientists only deal with matter state light and unknowingly with plasma light. They say that light is a form of electromagnetic radiation that travels as photons in waves with a spectrum of wavelengths. They say the photon consists of packages of energy that can behave as a particle or as a wave. And light rays are imaginary lines that the waves travel on, and light only travels in a straight line and they reflect and refract from surfaces. And when they enter objects their energy can be absorbed by the object as thermal heat. They do not consider the ray as anything in itself, like we do in Plasma Science, for them a ray is only a way to say that light travels in a direction as a straight line. It's important to have this background to understand the teaching Mr. Keshe gave today. And from what we just read, it sounds like they don't have much knowledge, definitely not Knowledge of Creation about light. Of course, whatever they observed is correct, but how they interpret it is where the problem comes in. They say light only travels in a straight line, but then they have to ignore what happens when it passes a star and starts to bend. This is where Mr. Keshe said, in the future they will come to us as Knowledge Seekers (KS) for understanding, because we simple people as housewives and cleaners can explain to the MIT professors about light.

It's interesting that they admit light comes from what they call, electromagnetic radiation. Here again is that reference to electricity being physical electrons. But here it refers to electrons vibrating and giving off radiation and these packages of energy become photons. In Plasma Science we learned that when two fields rub up against each other they give off light. This is why UFOs are seen as lights in the sky when they enter Earth's atmosphere, or how meteorites give off light when they enter the same and we call them 'shooting stars'. This is light we see in the matter state. So we are all talking about the same thing, but in this case we are going deeper in the knowledge.

Mr. Keshe taught in Book #2 that light can be a ray or a photon. In this case though, the ray is a single (strength) and has a more powerful center and moves faster. The point where it hits, or interacts with, releases energy that we see as light. A photon is much different, it has a plasma inside it and this is why when it goes near a star it bends, because the MG fields of the plasma of the photon and the plasma of the star are positioning themselves in respect to each others fields. It continues traveling to its destination and our eyes or equipment can detect it as light. This is a beautiful and simple explanation. But I guess it is more fun to make billions of dollars trying to figure it out.

Then he put a lot of questions for us to think about. How does our Soul travel in the U, as a ray or photon? And do we bend when passing every star? If our Soul is inside a UFO is it both a photon and a ray? These are some things for us to ponder about.

It's my understanding that in Plasma Science we don't consider the light the same way we do in matter state, where it is something physical that we see. We are so dependent on the photons, that if something doesn't appear through them, then it doesn't exist for us. I was quite surprised the first time I worked with an Electron Microscope and they told me that it does not see through photons, but rather electrons are used and the resulting image is converted to pictures that we are used to seeing and can understand. It's hard to imagine that when we leave Earth's dimension (D) we won't be needing our eyes, because our Soul will directly sense and feel everything. Maybe that's why most of our dream state is a blank and we can't remember it. And what he taught us was, that only when the fields pass over the front of our head that we can remember images in our dream. This is because the visual apparatus, the eyes and optic nerve are in the front of the head. This also means that physical position is important when working with the fields. Mr. Keshe always says, time, space, place and position. This positioning must be where we are in relation to the Unicoise, which in totality is the Creator. So we actually do have an existence or address in the dimension of existence.

For some reason a true understanding of light seems to be very important to understanding our own existence. What really is light? When we come home at night everything is pitch black and we can't see anything until we turn on a switch and then suddenly everything appears. Pondering this small act of flipping the light switch on in total darkness can bring a lot of understanding. Once when I was sick in bed I was bored and staring at the walls when suddenly I could see the dust particles floating around. And I realized that the sunlight is transparent. We cannot see the sunlight unless it interacts with an object, then we see the light. But we just 'take for granted' that the sunlight is a physical light shining on us, but it's not. It's really M fields and we only see the light when it hits an object and then it releases a spectrum of energy that our eyes detect, and we call it light. There is more to it, but this is good to start with.

A long time ago Mr. Keshe told us that the basic field of Creation is hydrogen (H), and then later he said that C14 rides on the back of the H. And more recently that Cosmic Rays (CR), C60 and other C isotopes also ride on the back of the H. And that a ray is a single field strength, and a field is made up of different rays. So this would mean we can have rays within fields and I think they keep their independence. What I understood from today's teaching is that the H ray part of the field, is directly from the Creator and it does not bend to anything, it goes straight. And riding on the back of the H is the photon which is made up of CR, C14, C60 and the rest. This photon is responsible for creating and maintaining the physicality (P). This would be the building blocks of the physical dimension. When we only receive the photon, then we remain tied to the physical D. But if we can open up to absorb the H, which is directly from the Creator then we can get the true enlightenment, which is a higher order field.

I started wondering, what is all this pointing to? Is spirituality something real and not just a mystical idea that we think will never dawn on us? When we start to study spiritual books and maybe try to meditate, it all seems so far away from our everyday life of suffering in P. As I was listening to the first part of today's teaching over and over again, something changed. Enlightenment is not something mystical anymore, rather it is scientific and it is very close to us. It's about the 'light' and if we can open to enough field strength, then our Soul will receive that light and our thoughts and feelings about ourselves will change. So what I understood is that there are 3 types or dimensions of light. There is the field strength of the light of our Solar System (SS), which is our Sun. Our Sun can provide us with enough light to understand our physical world. But that's it. I don't know, but I don't think the light of our Sun can take us to the Creator, it is limited to the dimension of our SS. And even at night or inside buildings we are still receiving the fields of our Sun. He gave a hint by saying, when we can go outside our SS and look back at our planet we'll understand something more.

The next level of light would be to go out into the U to look back at our Galaxy with our SS inside it. The Galaxy contains hundreds of billions of stars, so all these fields add up to a higher order strength and this will automatically bring us more enlightenment and more knowledge. And then we can go into the Unicose and look back at our U, Galaxy, and SS and this will also bring us even more enlightenment and knowledge. Here we have the trinity again. It's the U - Galaxy - SS and the 3 are in 1, which is the Unicose or Creator. The Creator contains all 3. It's very strange, but I never really connected to the Chakras with the Lotus's inside. They are wonderful images with a huge knowledge, but they didn't mean anything to me. I see them as an attempt by a great Master to help his students. But what Mr. Keshe taught us today, means something to me. I can see the Sun, and the stars at night. We can understand the picture from probes that show us the galaxies and universes. We see and feel the sunlight. This has a physical reality that I can relate to, and by working with the Nano materials, Gans's, and dynamic reactors I can feel the fields and understand the reality. It's so simple and beautiful. If you say to someone, that there is a machine you can sit in and get enlightened, they think you're 'crazy.' This is what it means that science and religion become one. But really in the future our children will understand only the reality and they won't kill each other over arrogance about ignorant ideas. Finally he said the light of the Creator gives the true enlightenment.

There was a question about understanding the liquid in-between Nano particles. He said it was the same as the 'mystery liquid' in the Coke bottle of some years ago and that there is a knowledge behind it. This is related to the fact that every plasma in the U is connected to each other, and one H atom can fill the whole U. These are mysterious things to ponder, but the main point seems to be for us to understand that even the plasmas in the Coke bottle are connected to everything, or he said, to every Soul in the Unicose through the D of the Creator. And last week he said, there are no empty spaces in the U. What we see as empty is really a solid gel that covers everything, it's at a different field strength than our vision so we can't see it. All of this points to the oneness of Creation.

Another point is that these space in-between plasmas act as a kind of filter for what field strengths we can receive. This is also a special knowledge to learn. But I am thinking of where do new plasmas start to form? Isn't it the so-called empty space in-between other plasmas? Like he said, grandmother was so good that now she is gathering strength and 50 years later is the size of a football. But where is she gathering? Isn't it the space somewhere between other plasmas? And where do higher level beings exist? They won't exist on a planet because that's at the level of P. For example, to create a new U you would have to be at the level of the Unicoise. Whereas the level of a U would be to create a new galaxy. And wouldn't all this depend on the field strength of the light we can absorb? It's becoming more and more clear the importance of knowledge. Without knowledge we remain on the lowest level and cannot decide things for ourselves, we would continue to be part of something bigger than ourselves that we have to obey. Right now we have to obey the structure of the P dimension we are living in. This workshop is opening up a lot for us to understand.

All the KS have been asked to donate their time to find people in Gaza who are in need of help with food and medicine. After 10 years of studying the T it's time now to use it as we know it works, and there is a need for it. Just like with the Monthly Flight sessions, all the people need to do is to have a pair of headphones and cell phone and dial the number. Arabic speaking KS will help with the translation and instructions of what to do. This is a big chance to breakthrough with the T and also to setup for future emergencies during time of natural disasters.

Today we have been introduced to the first Prophet of this planet called, Mehran. He said, it is not me. But he also said it is not coincidence. Maybe it is for us to understand that this era started with Mehran and is coming to completion with Mehran. The language and transmission of this knowledge was not totally clear. The main point seems to be that Mehran is the one who brought the understanding of the Creator to humans, or what we also call the Transcendental. If you remember we spoke about this earlier and that before Mehran the humans only knew the tribal gods and made statues to worship them. These later became institutionalized mainly through the Greeks to become the Pagan gods. And we are still worshipping the Pagan gods secretly in one form or another, even by those who consider themselves atheists. The concept of Abraham ('A' Brahman - Creator) was taken from Mehran. As usual Mr. Keshe will gradually unfold these teachings, and for now our job is to ponder this deeply.

The main point here seems to be how humans first learned about God, or the Creator, or what we call the Transcendental. In my studies the only ones who had this knowledge were the Aryans and one branch of them went through Mount Kailash into India and became known as the Rishi's and wrote the Vedas. Another branch went into Iran, which means 'the land of the Aryans.' And the first one we know of from this branch is Zoroaster. He brought the knowledge of the Creator and was of these Aryan tribes. Eventually all of the true religions came out of his teachings. The reason this is confusing is because at that time there was no Internet to keep everything connected. The movement of peoples was constantly going on. If a group moved somewhere, over time they forgot their original beliefs and everything got mixed up. And then mainly the

British colonialist sent their historians in to interpret everything in a particular way. This setup their control for centuries, and we are still trapped by their original interpretations which now have become fixed national identities and fixed beliefs. These beliefs are subconscious and this is why it may be difficult to accept what Mr. Keshe is trying to teach us. The main point is for us to understand the Knowledge of Creation and the Creator, and not names and dates of Kings and wars. He also called this, the knowledge of the Soul. When we have the knowledge of the Soul, then we don't need all these other things they brainwashed us with as children in school. They basically were setting us up to be the next soldiers in the next war they plan centuries ahead. The new T and knowledge will break all of this and bring us the true freedom.

Other Topics:

No one can enslave your Soul was said many times in this workshop;

In Sanya we'll put you face to face with your Soul;

Lips and facial skin is not sewn together, rather it's M field gap and this is where Herpes virus can enter, because has matching strength from brain, related to change in hormones;

The UFO that did vertical takeoff over Jerusalem was Iranian. Turned craft sideways and convert to ray, not transmutation;

Mr. Keshe inherited land in Iran to start Space Center. Iran's nuclear power will be used as fuel for nuclear space reactors.

Thanks for listening.
