

Release of New Plasma Systems Change Humanity - Scientists Preventing - Rainbow - Self-Sufficient in Energy - Neutron is Plasma - Heart Generates Current - Irregular HB Introduction to 561 KSW

Note: Not checked by KF interpretation by KS of KF Brazil

Today is a very special day in that Mr. Keshe has announced the development of yet a further technology (T) in the spectrum of Plasma Technologies that he has been teaching us over the years. It's an even simpler technology than before that is based on how the Universe (U) and Creation work, and like the MaGrav and Cup of Life we can easily make it at home and become self-sufficient in our energy needs, Wellness, and everything else. And we'll be able to use it to create the conditions of transmutation and physical transfer to another time, place, and position (TTP) in the U, or location here on planet Earth. Knowledge Seekers (KS) who have been with KF since the beginning have gone through different phases of technology release and attempts to bring awareness of the Plasma Science to the public worldwide and change humanity. There are two reasons that make today's announcement very possible, one is that we are on the verge of total destruction in the Middle East and it could lead to a negative release of the technology, meaning through war. And since we are a technology of peace we do not want the world to associate the plasma with war and destruction. The second reason is that in last Friday's Flight session Mr. Keshe tested the new plasma systems on KS and the graphs showed that the Soul of the Man (STM) is ready for elevation and to become part of the Universal Community. The promise of releasing the technology in 2024 is looking very positive. He had planned to release the T on November 16th in Iran as we all have been expecting. He was going to open a suitcase and through the interaction of the fields a UFO will be created in front of everyone's eyes. That's only 3 weeks away and coincidentally the war is expanding at the same time. Or is it another attempt to stop the technology from coming out?

The Ayatollah Khomeini of Iran has until midnight tonight, the 24th of October to decide whether Iran will be the nation to release the technology worldwide. This has always been Mr. Keshe's wish that Iran would take the lead in spreading the T across the world. Iran has already made huge developments in the Plasma Science and throughout history Persia was always a center of higher knowledge, though that tends to be denied by British Colonial historians. It's only the public that doesn't know about Iran's development. All the world leaders know and they are trying to block it. Mr. Keshe is creating certain conditions to make this change happen. But if the Ayatollah doesn't have the courage to go forward, then within 24 hours it will be offered to the British Government to release it. And then later on to the other governments. I am wondering if the British scientists even have enough Soul to be able to demonstrate the T. Whereas we already know the Iranian scientists have that Soul in their genes and they have demonstrated it many times. If still

the governments resist, then he promised to do a Blueprint Day where us KS will be responsible to make the system and spread the T throughout the world.

To lessen the chaos that will be created by the change, it would be in the best interests of the governments to cooperate with Mr. Keshe and bring the transition in a smooth way. Some hours after Mr. Keshe's announcement of the new plasma systems that will end nuclear war and hunger, the Israelis launched some missile attacks on Iran. For the most part the Russian defense systems were able to repel all of them. The way the News reported everything was very unusual and strange. It made me think that Mr. Keshe's negotiations are happening in the background, and this retaliation had to happen to quiet the Israeli public. Let's hope and pray they will now be able to go ahead with the release of the technology.

Today's workshop started with an overview of the historical development of Mankind's science and how it has lead up to where we are today. We can see that humans understanding is very low and were mostly only able to burn things to get energy. And then suddenly in the last 200 years huge developments took place. The implication is that members of the Universal Community took birth in human bodies and brought the knowledge to the man. For instance, if we carefully study Nicola Tesla's life it is clear one of his Soul's was not from here. It seems that humans are only able to copy what the others provide. Even with this knowledge that was shared with humanity it is not enough to travel and live in deep Space. Even the level Mr. Keshe demonstrated in Iran as "lift and motion" is not enough. That is only the level that the "Aliens" are at. We call that UFO technology but still it is very low compared to what is being released today.

Next it is important for us KS to clearly understand that it is the so-called "status quo" scientists and academicians who are blocking the release of the technology. Like we just said, they are the ones who copied the geniuses and then made their discoveries into a dogma to believe in, and not to advance the knowledge. This gives them a position of power and wealth. This is the same thing we see going on in the religions, where the priestly class has built up a very comfortable life of wealth for themselves and control over the others, and the only way to continue their position is to keep the others ignorant. This is what we have been up against over the past decades with trying to release the T. But at the same time it has given us the opportunity to grow in our own understanding. But now it is time to confront and overcome this obstacle. The only way seems to be elevation of the Soul, which the new systems will provide the necessary M field strength.

What was the importance of Mr. Keshe talking about the rainbow today and how it is formed? Maybe because there is a third factor that we never thought about, and that is the interaction of the Universal Fields from the Central Black Hole of the U. The scientists only consider the sunrays refracting off of the water droplets. The water droplets fill the whole sky and are not shaped in a bow. Humans have been trying to figure out the rainbow since the time of the Greeks, but we don't have enough knowledge to go further. Today he gave us a few more bits of knowledge to consider. He said, the GM fields of the Earth interact with the Universal fields, then the bow shape must come from those fields as they hit the horizon of the planet. And he said, you can tell which elements are in the

Earth by the colors in the rainbow. This would mean that their field strength is part of the fields emanating from the Earth that interact with the U fields. If we could take this rainbow setup to another planet the colors would be different because the fields are different. The rainbow is made the same way the rings of Saturn are made and how we get our skin color, or the different color of organs. Much of today's teaching is about how the U Energies are passing right through us all the time without our knowing it. And now it's time for us to learn how to interact with them. The rainbow is a good example of interacting with the Universal Energies that we were not aware of and how our scientists don't have a clue about how life in the U operates.

To prepare us for the release of this newer T some weeks ago he started teaching us how we are connected to everything in the U, but not just as an idea, but as a reality. The AA, or the COHN is the building block of life on this planet and our body. It combines the Universal Energies of the C-H, and the physical manifestation of the fields at the TPP of Earth is done through the N-O. And then our shape is made through the crystal structure of the C60. Everything is created through the same basic principle and pattern, but the manifestation looks different. And added to this knowledge is that the containment of the plasma comes out of the fields of itself from the central energy or Black Hole. So that means the containment of our body comes out of the fields of our STM in the center of the head, it's also known as a Black Hole, because it absorbs energies from the U and recycles them for what is needed in the body. This means that the body is not a solid matter state object, rather it's a dynamic plasma in constant motion. So is this where all the energy comes from? Energy is M fields in motion. All the teachings are pointing towards understanding the new system and how we are going to utilize the U Energy.

The Cosmic law seems to be that when you create something in the U you are responsible to provide your creations with enough energy to live. This seems very strange for us, because there are cases of humans abandoning their children to save themselves and allowing others to look after them. It's clear from what we have been taught that our Creator through the HC, or the Love of the Creator is actually feeding us all the time, but we have put up a mental and emotional barrier and are not receiving it. When we think of our mother, grandmother, great-grandmother and so forth, this is the same as our Sun, Galaxy, U, and Creator. It's plasmas inside of plasmas and today he said, the U Energy from the Center of the U passes through all those plasmas and through us on the way to the outer boundary of the U. Therefore, we are never alone. We are always cared for. Even our Sun is constantly feeding and taking care of the Earth, we just don't understand it. And then our scientists try to make us afraid of the M fields coming from the Sun. The Sun is feeding us for billions of years and providing the energy for movement. So our Mother the Sun is feeding us without us knowing. And when we transmute to another planet, which will have its own sun, then we have to connect to that sun, so that it will also feed us while we are living there.

Our earthbound understanding of energy will have to transform if we are going to use the new plasma systems. In the U with plasma, Energy is M fields in motion. As humans we think of energy when we eat food and the chemicals breakdown and release energy, but then somehow the body magically uses it. And then there is the electricity that always

travels in wires. Okay, if we spin an iron magnet then we have to have a wire there to catch it, and then we go and spin other magnets and motors and 'what-not,' to make it do work for us. So in Plasma Science just the movement of M fields generates energy, and it doesn't need wires. I think this means the M fields and thus plasmas are self-sufficient in energy. And the controller of the energy is going to be the emotions. Being self-sufficient in energy would give humans their freedom on this planet. Now we understand why they are all afraid to have this technology come out into the open. The new plasma systems are going to give us access to the energy that is already here with us and within us.

What I understood about Mr. Keshe's teaching on the neutron is that what is being observed in the matter state and called physics, and what is happening in the plasma or energy state is the same. It's the interaction of the fields and then certain people gave it an interpretation and the others only believe in that. In the matter state, scientists have observed that when the neutron splits into a proton and electron it gives off energy and that's what nuclear physicists collect and call nuclear energy. This same interaction from the point of view of plasma is understood in a very different way.

To explain the plasma better Mr. Keshe first brought in the energy of Creation. He said, the Universal Energy is one continuous line of fields or a continuous supply of energy from the Creator. And when we take a measure of it as a plasma, then we call it a neutron. So in reality a neutron is an energy, but to speak about it in a concrete way the scientists only understand it to be a matter state particle and this is what confuses us. From the plasma point of view we say that the neutron, which is a measure of a plasma, builds up in energy and then it divides into other plasmas of different M field strengths. It doesn't change into something else. It becomes other plasmas of different field strengths and amounts. And what strength plasma it becomes is determined by the other fields and conditions in its environment. It can be a proton and an electron or other elements. For example, when plasmas in the upper atmosphere interact with the fields of the Sun, Earth, and Inertia they may become plasmas of Cu, Zn and the rest. And then they can manifest physicality on the surface of the Earth, that's what we call copper and whatever. It all depends on the field strength and the conditions under which they interact. But we can also say that a plasma of the measure of a neutron divides and gives off two plasmas of a proton and an electron, then we would call that the fundamental element of Deuterium. But we still need more details from Mr. Keshe about this process.

He said, there always has to be a Twinity interaction, which depends on the environment. In the nucleus we have pairs of neutrons and protons and when they are of equal number they say it is stable. Now we can understand why. It's because the same number of neutrons create a Twinity with the same number of protons. And when there is an uneven number of neutrons it means the plasmatic field strength is in excess and it will divide into other plasmas, like what happens when the cells divide in the womb of the mother. Then he said, the neutron and proton pairs will create a Twinity with the electrons, but I don't understand how that occurs or what it means. Would the atom itself become a plasma with multiple plasmas inside it?

The Central Gravitational Line of the U, or the Black Hole not only dictates the size of this U, but it also dictates the size of the neutrons for that particular U. So in our U all the neutrons will be basically the same size. But there are slight variations. In the Unicoise the neutrons of the universes are of different sizes depending on the conditions.

Then he explained 2 physics concepts. When a neutron plasma comes under friction and if energy is added to it, it will cause it to split into another plasma of a different field strength. This is what they observe as nuclear decay. If the decay occurs because of energy loss from within the nucleus then, it will have a set time based on the number of electrons and they call that a half-life of a particular element.

The scientific reason the STM can be the beginnings of a star is because it is already a plasma and has a M field composition, so other fields can get attracted to it.

The Daughter of Mitra is amongst us and she is bringing in a new cycle of knowledge. Is it that she was created out of the fields of the U? Therefore, it's not a physical birth as what we might be expecting. But then she could take a P if she wanted to. She is not limited to just being a Soul. She has already influenced many things on Earth.

If we watch a water fountain we see that the water is pushed up in the center and when it reaches as high as it can go then it kind of arcs over to the edges as it falls back down into the pool of water to be pushed up again. This image is like the continuous flow of the fields from the center of the U to the boundaries and back again in a constant flow. Those fields are the U Energies and they continuously pass through everything in Creation including us. This is what gives the shape and maintains the boundaries of our U. This is how the electrons create the boundary of the atom. What is interesting to ponder is that we are living our lives on top of this background flow of fields that we never knew existed until today. It reminds me of an analogy once used by an Indian sage. He said, when you go to a movie, everything is dark, and then the movie projector comes on and an artificial light is created, and on top of that light all the images of the movie are projected. When we are watching the movie we don't even notice the background light. And that light is the Love of God. Mr. Keshe calls that the H and all the reflected fields that make up the Creation as C14. And the C60 pops it up like a popcorn and gives it the dimension of the crystal structure.

Over the years we have been wondering if electricity is really M fields and today's teaching on the heart as a M field generator seems to confirm this. Electricity is made from spinning Fe magnets around Cu wires and also remember that the early batteries were made from Zn and Cu in saltwater. We have to use our imagination and feeling and put all these things together. We know that by spinning different Gans's in balls next to each other we also generate M fields and can create materials from interaction of these fields with each other and the environment. In our body we have Gans's of Cu and Fe in the blood flowing fast throughout the body and when they reach the heart they create a vortex of fields and are violently or with force pumped out again. The pumping aspect of the heart is important but not for the reason the scientists think.

In Plasma Science we look at the interaction of the MG fields of the blood itself as a generator of M fields. We say that "blue" blood is darker because it has discharged its energy to the cells of the body. And the "red" blood gets charged with energy mostly in the lungs. We could also say that the blue blood is G and the red blood is M, but the main point is, that there is a big field strength difference between the blue and red blood that will create a Twinity interaction between them and that will generate M fields. This would mean that when the veins and arteries are running next to each other throughout the body they are also generating fields between each other, because of the gradient in field strength. We may have never thought that for example, the veins in our arms are field generators that can also feed the cells.

When the blood flows into the heart and hits the walls it also generates M fields the same way water pushes the turbines in dams to generate electricity. We don't see high voltages because we are talking about Gans plasmas in the blood interacting to create plasmatic M fields, which can be measured in the matter state as low currents in the body. And the fields interact in the heart and spread throughout and feed the whole body with energy in the plasma state. There are 4 chambers in the heart but they are divided into 2 sections. In each section the blood first flows into like a gathering chamber they call the atrium and then it goes into the main chamber and is pumped out. These 2 sections are side by side, but they are totally separate from each other. This is a genius construction because one side is M and the other side is G and they interact and form a Twinity and generate M fields.

The muscle tissue of the heart must have special properties because when it gets hit by the blood it generates M fields. When I had my heart checked at a heart specialist they told me that the beat of the heart is generated in the walls of the heart, and to stop irregular heartbeats they insert a wire into the heart and burn the tissue of the walls in certain places to stop it from creating a pulse. For some reason I thought the heartbeat was controlled outside the heart, and not in the muscle tissue itself. In a way, it confirms what Mr. Keshe said today about pressing the muscles of the heart generates M fields. I wonder if other muscle tissues do the same. Because in Chinese Medicine we used to slap the skin outside the muscles to stimulate the Qi.

Mr. Keshe answered the question about artificial heart in terms of the STP, which generates the P and will adapt to the conditions. Most certainly it must effect the creation of M fields in the body. The body will have to compensate for the lost of the M fields from the heart tissue itself and it could do that through the vein system as we discussed earlier. But the blood pumping through the heart should still generate M fields similar to how it does with a living heart. The statistics says that life expectancy for artificial hearts is only 1 to 6 years and they have trouble with the lungs, kidneys and other organs. If the doctors would be open to the plasma, maybe they could find a better way to compensate for the missing M field strength of the heart tissue.

What I understood from the teaching is that the heartbeat is created by the differential in field strength. In other words there is a Twinity between the "blue" and "red" blood. The synchronization between the different heartbeats of different entities like the STM, STP,

Soul of the Planet, Sun, Galaxy, and U is all based on the difference in field strength between them. I still don't understand what this heartbeat really is, but this information has brought us one step closer. I hope he will teach more about the irregular heartbeat and what it means and if we can correct it.

Finally, neutrons are a package of energy and are created based on the fields of the environment in relation to the G field positioning of the Central Line of the U, or the Black Hole. Basically they are a plasma and they are ready to create. It's interesting how scientists define a "free" neutron, as one that is not what they call a particle in the nucleus. It actually sounds like a plasma. Knowledge seems to be about the field strength that we can handle and how emotional mature we are to live our own life.

Other Topics:

When we tell the people not to kill, then we have to be able to provide the facility for it, so that man doesn't even think about killing. This will be done through the new T;

The DNA has both a physical side and an Energy, or Universal side, and what happens in the matter state of it is dictated by the Central Gravitational Line of that cell. It's like the U and the Macro is in the Micro;

BRICS has a Soul and it is bringing a healthy balance to world;

The hint was, it's been a long time since I was on a flying carpet;

Thanks for listening.
