

## **Interview with Mr. Keshe to Italian Channel** April 8, 2024

(Editing done by KF Brazil - Partially Proofed)

(Auto Transcript by Elias)

Link to the Interview: <https://www.youtube.com/watch?v=fc8zWtIt3OI>

(:02)

Q: Hello everyone, welcome to my channel. This is a live recording, but a very special one because it's the first day of the year. I'm in Sanya, China right now and today is Nowruz, the first day of the year, both for the astronomical calendar, because it's the equinox, and also because it's a special day celebrated not only in Iran with the name "Nowruz" which means "New Day" or "New Year" but also in a huge part of the world because it was a festival. It's probably the oldest festival on earth and it was in the Persian Empire. There are about 30 centuries of history on this festival if not more. For us here, it is a festival indeed. We celebrated just a little while ago the first day of the year, the real New Year. And yet Mr. Keshe is with us anyway to record the interview. So for me it is a great honor and I thank him profoundly for being here today.

K- Thank you very much.

Q: Okay, now my question is, after this seminar, because today is the first day after spending four days together for the third meeting of the Plasma Space Traveler seminar, which is the seminar that we have just finished. And in relation to this experience that we've just finished, I would like to ask Mr. Keshe what his perception is of the level of humanity towards this new technology that is coming.

K- It depends, you are talking about only people who have participated in the meeting or humanity as a whole.

L: You can take both, if you wish.

K- The people who take part in this conference they are all educated over years, (:04) 5 years, 10 years, they know what they are in, they know where we are going. So, with them is impatience, they know what can be done, and there is a technology that could be there, that they can do it. And so, when you see them, when you talk to them, it's just impatience, they want it to be done, they want it to arrive, to make the change. The change is not something that's going to be the end of the year, or the end of the life, or end of the planet. It is the beginning of an additional knowledge to which we have already, we just extended it. And so, outside, don't think, cannot think such a thing is possible. They don't even think about it, because the scientific world tells us it's impossibilities, it's a lot of things. But, within the circle of Knowledge Seekers who are close to the technology, and they have sensed it, they feel different. There is a time. It needs to be. You feel, a lot of them, in the past 4 or 5 days, impatience, that you can do it, why we don't do it. So, as a Knowledge Seekers, a lot of them are waiting for it, they know it is possible, because they felt the energy of the technology. From outside, it's

something nothing to do, because nothing we can do about it, so we wait till something happens one day.

Q: Okay. Many people say that humanity is not ready for a new era. What do you think is the barrier, from an energetic point of view, that humanity must overcome in order to enter a new era?

K- It's not a disclosure. We teach it every week. It gets disclosed more and more for the past ten years. Last week is 10 years of teaching, non-stop. (:06) The point is that we've been conditioned to accept a lot of things around us, about the science, which is fake, that what is real about themselves, they cannot accept. As I always say, nobody would like to sound stupid, and I accept it. But, it's not stupid. It's additional information, but in a different way. They always say, in the olden days, they said, if you go more than 20 miles an hour in the car, your blood comes out of your nose, your ears will pop and you die. Now we do what? 400-500 kilometers, nothing happens.

People were afraid of getting in the car and going fast, because this is what they perceived, they've been taught. Science says this, so people were scared of the scientists. Now, it's the same thing. People are afraid of going faster, because some idiot somewhere said, "You can't go more than the speed of light." Well, we actually can go the speed of light, it's one of the lowest scales of speed in the Universe. But now, try to change the talk, what we accepted, and a lot of people make a lot of things out of it, because he said, so, he's a guru, we go that way, what he said, and now, somebody comes, shows physically the system, it can be done, there's a problem, because we accepted, none of us like to say we are stupid.

And now we got stuck in the stupidity of humanity, because of a stupid man who was a, more or less, what I call a bookkeeper, Einstein caused more problem than anybody else. We have got a brain freeze, because of a frozen brain, which was Einstein, and everybody believes it. And we have made formulas, we have done tests, to prove he is correct. (:08) Yeah? So, the problem is, accepting that there is more to the knowledge than what this guy has put a line. It's literally, what I call it, the whole of humanity, on a science level, has been hijacked, terrorized, by one Jewish guy called Einstein. Who's a bookkeeper.

If we get people to understand  $E=mc^2$  is just loads of rubbish, if we stop people accepting the speed of light as the ultimate speed, humanity will move. And, this is the problem of today. Scientists like me, are not the only ones. There are many, many scientists, who say that if you go back in the 1930's, German top scientists have written an article, there is a huge article telling how much rubbish Einstein is talking, why is it accepted? It's documented. There are papers, there are opposition to Einstein, all his theories, because it's nonsense. But, he was Jewish, we had the Holocaust, Jews were victims, so they used him to stick it up. But, none of, if we take this hijacking, this terrorist of science, what I call Einstein, taken out, we are talking about the continuation of science.

We are not adding something new, we are talking about... It's very simple. I always say, we started with nothing, we had the fire, then we started understanding the metals, we

mixed the metals, we made alloys, we became scientists, we called them molecules and atoms, then we knew the molecules, now we went to atoms, we became atomic physicists, (:10) we became the nuclear, we start talking about the energy, that it changes to heat, or whatever, now we are talking about how this energy created, or where does it come from. Is it a heart? Einstein has hijacked this point. Man cannot think what happens, how the energy comes out, that's what it is. So, we are going to the next extension of science, in understanding where the heat comes from. We accepted the nuclear. Nuclear is radiation. Radiation is coming from somewhere. It's energy. So we're going to see inside what it is. And we see it's so easy, it's magnetic fields. We call it Plasma.

So, where the people found the atom were wrong, people who became nuclear were wrong. Now we open the atom, we find the energy, we are wrong. Except those who have written a lot of fake books, confirming this hijacking, and now we are going to stop with it. There is nothing new. It's an extension. It's an extension of knowledge. And this is where the problem sits. And now, with the conferences like this, you saw, in this conference, three well-known academicians, appointed by the leadership of the government, the country, to sit in this conference, two specialists, people from the military sitting and listening, saying if it makes sense. And, the way we explained in the conference, they all accept.

Technology, they have confirmed to the leaders of the nation, technology has moved on. So, we already received the green light. They accepted the leaders of the science in this country, which are appointed by the leaders of the nation, if these three leaders, scientists, academicians, would have accepted the technology is right, we go further, (:12) if they say no, it was just another conference. Now, it already was decided in the second day. A new technology has come up. And, this nation will be part of it. 2008, in Iran, we had the same thing. No difference to us, to me, this, that. When I went to Iran, invited by the government in 2008, they put 5 of the head of the universities, all professors, all elite scientists, to decide on the science. And, after 2 hours of discussion, explaining, and a beautiful lunch, the all 5 said, "Yes, it's a breakthrough."

And, Iran moved into a new technology in 2008, we are in 2024, now China is moving. There are people inside the Keshe Foundation who are blocking things, deliberately. Fake news, fake things, taking us in the wrong direction, all that has stopped. Because the leadership has decided, we come in, we don't listen to none of this nonsense. So, now, we are talking to the other half, which is the Americans. For them, they know the situation, to open up. And, now it's a combination of two leading scientific countries, Iran in atomic nuclear, China moving, now we have to see... then they start teaching people. You understand? This is public teaching. And then, we all move very quick.

Human race is very good. The minute they find a track, they follow it. You understand? So, now, the biggest hurdle for us, was to bring Iran, America, and China on the table of science, nothing else. And now we are moving. The change by leading scientists accepting, (:14) has changed. This conference will bring changes, because we already have confirmation from the leaders of the nation, technology is going on. It doesn't matter

who we discuss anything in this country. They drew a big line over anybody we spoke in the past. This changed.

Q: Speaking of which, many Italians wonder why you chose China for this new step.

K- You're Italian?

L: Yes.

K- Are you sure?

L: No.

K- I spent 6 years with Italian scientists. I lived in the Cinzano. I moved south to Bari, in Barletta. Working with scientists. I worked with many nuclear physicists in the Italian nuclear center. We made a lot, some tests, and a lot of work we did with the Italian water contamination, and all sorts. But, then, before that, we spent 10 years in Belgium, with the Belgian scientists, and then before that with the British, and at the same time, we didn't stop with the Italians or the British, or whatever. China, we spent 7 years in China. It's not just a conference. We came here in 2017, we've done a lot of work, a lot of tests, a lot of technology proving, it's not just, you get these people just turning up, yes it is. A lot of work has been done here, by Knowledge Seekers, and at the same time, a lot of Chinese scientists know the technology. (:16) They are on the edge of it. They understand it. And so, this is another stop.

We move to, what you call it, United States in a bigger way. We have already structures, you hear in a very short time, we already have opened the doors in Brazil. Russian scientists are already with Keshe Foundation for 20 years, some of them leading space scientists, this is part of the structure, and this is not new. We started this series of conferences in 2019. It was planned where we were going. Corona came in the middle, it stopped us. The first conference was, we had in Italy, in Rome, two conferences. The very first one was in Dubai, then we went to Brazil, we went to Malta, and while we were in Malta, Corona came and everything shut down. So, we had two conferences in Italy, in Rome. The first and second conference in Rome.

And then, now, we had two in England, in 2023, one is here, we move into Iran, Washington, Brazil, and then next, and next, and next. Because, this is not a show, this is a teaching. And the way you have never seen a conference the way you have seen it in the past four days, is not somebody standing on the top, and next one coming, reading the next article. The audience is part of the knowledge. It's very unusual, if you look at the Keshe Foundation conferences, I stand there as an interviewer, like you. I put a little bit, they come out with it, they ask questions, and they get feedback. (:18) I had one of the Chinese what you call it, leaders here, said, "We've never seen a conference like this. It's not organized." I said, "It's not an organization, this is a family." It doesn't matter what color you wear, you're Chinese, you're Indian, you're Iranian, it's all...they all have the

same knowledge, they have worked, they have done things, and now they want to see if there is anything they can do a little bit better.

He said, "This is the most strangest conference." But it's the way we learn. Every question is a knowledge. It's not there that I say so, I've done the research, I'm a professor, so and so. They are all professors, they are all scientists in their own way. And this is the way this knowledge will go. It will be carried by people, the way it's carried in China. In Iran, we have the same. We have the same in Austria, we have the same in... even in Belgium, we cut Belgium out because of the reasons we have. We have opened the doors for the Belgians to come back in. The Foundation, according to security statistics, has over 100 million people who come, who go, who learn, who do things. And they just pop out, more and more. It's a natural process. You're Italian. Who made the first pizza first?

L: Chinese!

K- No, they are noodles. The pizza is yours, the noodles is theirs. But, because it's such a delicious thing, we all enjoy you come to China, you get a pizza, you go to Africa, you get a pizza, you go to Italy, you get no pizza, is no good. You go to England, you get a pizza. So, because it's something we all enjoy, everybody does. And this knowledge will be like that. So, this is the extension of the knowledge. And we are just servants to people, we just extend the knowledge. They use it and they work with it, and many people are using it. (:20)

Q: This knowledge was born to bring peace, and this was said in the conference many times, but I don't know how much the audience listening to us understood how new technology and a new understanding of science can really bring the conditions for global peace to the table.

K- The governments all understand. Peace is the consequences of the knowledge. It's not the target of the knowledge. This is what I explain in the teaching, and in my talk with all the diplomats and politicians. We are not, we say we do the technology in exchange for peace. This is the title of the Keshe Foundation, it's our motto. But we are not giving technology to the government. We are giving technology to the people, that as they use it, forces the condition of peace. We are giving it to the government, to show what your people can do, that they understand, it's not exclusivity of them. We are pushing to the next step. What we saw here in this conference, was very simple. At one point, the feeling, because I see them, we talk to them, we have lunch with them, was that we are less knowledgeable about this technology, that the people who are farmers here, one of the academicians was offended, that there is a farmer here, who works in a garage, makes a space reactor, and him as an academician, has no clue about it. It's not anymore, I oppose it, [is] how much have I missed?

And, you've seen here in the conference, (:22) it's not them and us. We hug, we kiss each other, the Chinese, the rest, because it's a family. The same. We spent 7 years here, he wasn't sitting behind a desk, he was just working, doing things with people. So, the

scientists in this conference, it was very clear, we had the same emotion, feeling in Malta. In Malta, we had the same, with the scientists who were brought in by the different groups, that how come we literally know a woman in a kitchen as a housewife, and I'm supposed to be an academician?

This touched the Chinese academicians this time, because when we had a meal with them, they said, "This is what surprises us, we missed the knowledge, it's not that the knowledge is not there." So, we teach enough, people use enough, that we show the governments, you are the one who's left out, but you want to make it inclusive, the condition is that, when you can have a, what you call it, gold, as much as you like. And my little girl, age of 5 year old, making the kitchen gold, so who's in power? I will show you something. That pocket. This is the amount of gold which has been made inside concrete blocks in the past week. Now, this is 70-80% gold, this is 90-95% gold. We have separated. (:24)

Q: Which one is 90?

K- 95 and 70. You see the gold. Now, can you hold this? Don't take the energy. This is how gold as energy looks like. You can see it. ?? absorb in your body, because it's a plasma. Now you're worth a little bit more. I sell a gram of this gold for a thousand Euro per gram. It's about a million dollars a kilo. For a real gold, you pay fifty, sixty thousand dollars. The difference between this gold, is a plasma of the gold. It's the energy wherever you go in the Universe. Nobody can give you this. And, if you understand what you can do with this, because we don't say just it's gold, because we say so. Chinese military, Chinese laboratories, have confirmed it, as an energy, it's gold. So, we know it's there. We showed the data from the labs.

Plus, part of this material is the materials which indicates that the gold exists in the environment, which means another 20, 30, 90, whatever elements. So, if I get my system right, I can make a kilo of gold a day. Which I don't need as a matter, I can use it as an energy to feed the whole nation with it. Would you like to buy a kilo of gold if I change it? (:26) You are a shopkeeper, you make a kilo last night in the kitchen, the housewife has made half a kilo in the kitchen, you know, as I said, you go to the shop, I have half a kilo, she says I made one kilo myself, so it has no value. Yeah? You understand? So, we come to that point. And then we come to another point, that if you understand this, and you can put this in a specific condition, and I put this beautiful lady in between it, she can have all the food and medicine she likes.

Do you want to go and kill a cow to feed yourself? Do you want to go and cut a, what you call it, a vegetable, which is a life? Or, would you stand in between this and get everything you need without killing? You understand? So, to you, as a gold, it might become a ring, and then you make your commitment for life to a woman, to me, it's a life-saving thing, it's the energy of it. If you hold what I hold, my fingers are tinkling with energy. In a way, up to now, we use what I call... I carry this, it's beautiful... we use this thingy, getting it the right way, to start a fire, if you understand it, with a match. Now I do the same thing, I start a fire of knowledge in a bottle. There is no difference. Here we use

this to cook, to burn, to create energy. Now the energy comes from this. This can only burn something, as give energy to cook another animal, to whatever it does. This carries the energy that makes the animal. Why do you need to kill it? It's a difference. You understand? So, this is where the new technology, the new science brings a change.

(:28) And the thing is, we are going to space. How many matchboxes can I take, and how much wood I can take, and how much nuclear reactors I can take to space? I carry a few grams of this in my pocket, I have my food, I have my medicine, I have my energy, I have everything I need to survive. That's no difference, it's just an extension of knowledge. We learn how to start a fire, we cooked. Now, we know how to use what created that fire, we don't need to cook, we don't need to kill. And, the beauty of this is, it carries energies which satisfies the emotion of the man.

Hunger for power, to be a leader, to kill, to be a king, goes with it. It satisfies not only the stomach of the man, but the emotion of the man. And that's where the peace will come. And we are not talking theory, because it's there, and it's made in concrete room, in four days. When we did it with the Chinese military in the mountains, the whole room, the whole environment outside, inside, is gold. But this gold is not a gold, you can eat and make a jewellery with it, you can do it, there is a phase to it, you convert it, or use it as an energy, and does everything.

I can make potato with this, I can make...do a flour to make you a pizza with it, I can add the same meat you want on the pizza, I can even make you that little red wine to go with it, knowing what to do. Because we've done it, it's not something that's going to happen. So, it's an extension. You want to still use the match? Or do you want to match it with what it is in it, to get what you like? (:30)

Q: Just regarding gold, this is a question that I was asked. I mean, it was written on my channel by many people and I personally think it's a silly question. But since it's so common I'm going to ask it, and it is, since it's possible to produce gold and convert it into spendable gold, why does the Keshe Foundation need grants, donations when they could produce as much gold as they want?

K- We don't need the money. Money is not our objective. We set money to billions, because it would have bought the technology and shelved it. It's everyone to participate in it, that they can keep it going. It's a big difference. We can produce anything. We can produce kilo of plutonium, 100% pure. Governments pay billions for it, we don't need you.

I don't even need to talk. The whole object is that, to bring more people to participate in it. Let them make gold. A few Knowledge Seekers tried to make gold, but they didn't succeed. Some made some gold, but they couldn't convert it. You understand? So, the objective is not gold. We work within the structure of sharing knowledge. Otherwise, we can do everything else. Gold is worthless compared to materials I can produce.

We produce a rare earth material that the American government will pay a few million dollars a kilo of it, because the Americans technology, development in science is stagnating, because the Chinese have bought all the rare earth materials, past 30, 40 years, locked it, West cannot move. (:32) And now we produce rare earth materials in the United States, and we told the Chinese we are going to do it. And the Americans, instead of me making \$56,000 a kilo, they pay me \$4 or \$5 million for a few grams, and...but that is to change the condition again between China hold on the science and technology development, and force the nations to speak to each other.

This... I can live a king's life, but I live within a frame that we carry people with us. People have to carry this knowledge. It's now that we lost tens of millions in the past year and a half, two years, by fraud, which is now in the Austrian, what you call it, legal frame, by people set up deliberately, by other governments to do this, we slow down. Now, we are back up again, we had to sort a lot of things, and then we had the Corona at the same time, everybody says, you know, it's a big problem, and I thank God, both for losing the money, and with the Corona, because it blocked us, and we have enough finances we developed.

We went into the labs, we concentrated on development. If you see, I showed at the beginning of the conference, we used to make a gas machine, we showed a year and a half ago, we can literally get a Mercedes, what you call it, inside it. It was so big. Now it's reduced to a bottle. That's the technology development. And very soon, it will be in a small container. So, did we go outside? Did we rob people? (:34) Did the Keshe Foundation work stop? And, when we saw the development, we needed money, we went to the Keshe Foundation Knowledge Seekers, says, for the first time, the Foundation is asking for support. And it came. It came. A lot of people supported us. But, we are not in the hands of the governments. We did not sell the technology to get money to research. We are independent, nobody can touch us.

Nobody can dictate the Keshe Foundation what to research in, and where to research in, because we stay independent. And the cost of the Keshe Foundation on a monthly basis, is in 5 and 6 digits. It's not what... We run labs which people...if we don't pay one of our staff, one month, we go into problem. If we don't pay our bills, we go into problem. Just the Internet, you go on the Keshe Foundation, whatever, with all the backup to it, it costs the Foundation about 30,000 a month. Just you go on the show, kf.global, it's not just that, it's updated, upgraded, server changed, service brought in. Staff, we pay like you do, Zoom charges so much, we pay nearly 10,000, 8,000 a month, just to the Internet companies. And then you have IT staff, everything else. Forget about our research. That side, you're talking about 20,000-30,000 a month. Then you put our research on. You don't want... Did we go bankrupt? Did we stop one day, not broadcasting? Did we stop?

Actually, in the time we lost more money, we invested more in research, (:36) and that's what you see. In the heart of Corona, we opened the exhibition. 2,000 m<sup>2</sup>. A lot of Italians came. So, we don't need to print gold. We have a gold which is a knowledge in our hand. And that is carrying us through. I don't need...what do I want to do? I eat. I used to be much thinner, and because of the Corona, I ate a bit too much, I got fatter.

Now I have to diet to lose it, to go back to what I was. What am I going to do with the money? You understand? And our staff are paid the best wages in Europe, outside.

Wherever our people served correctly. Our staff in Austria, are paid wages that actually, we are taken to court by the government recently, in Austria, because we paid too much to somebody who was supposed to receive so much. We are in court because we paid our staff more than what is legally allowed. We are in court today, we can go to the court and say, the judge says, law in the country says, for this class, let's say you pay 2,000, why have you paid 2,500? They are penalizing us, and I sat in front of them and said, "These people we train." It doesn't matter, Because, you are paying too much, then the others have to pay too much, and the economy cannot support." And I said, I thought we were respecting our workers. It cannot be. Then we are paying penalty for paying, and where we saw mismanagement, we closed. Very directly. You are trusted to do, you have to manage. Where we saw there is no development, we closed. Where we saw abuse, we closed.

(:38) We closed one of our biggest operations in Central America, because of the abuse we found in it. Keshe Foundation became covered for illegal activities, which was covered under my name. I closed, I sold, I moved out. Because we trusted somebody who we thought we trusted. The same thing happened in China. We gave it to the manager, and it was incompetent to manage. We closed, now we come in a different direction. The same in other places. We were extensively busy in Thailand. We moved out. Because there was some things we couldn't understand.

Keshe Foundation, in 2018, 17, had a 350,000 Euro per month wage bill. Do I need to print it? We go to anywhere, we have no overdraft, we can open all the bank accounts, we have another set ??, it's our money, I invest it privately, and where I need, when I see operation work, I invest. I ?? problem with governments, which is a different thing. I don't need to print, what I don't need... what is the use in carrying more gold. It is not printing, it is sharing the knowledge, but carrying the governments with us, carrying the people with us. And this is more knowledge.

Ten years? I think tomorrow is 530th week, non-stop, for ten years, we taught education and people... everybody takes from it what is ??. So, I don't need to print, but my gold is the investment of the people you saw yesterday, in the past four days in conference. When they are here, they don't ask for anything. They are here to share knowledge, they are here to respect the knowledge, and I think we have from 20-25 countries, (:40) or islands and nations, in a conference. This is the gold, not what's in the pocket we can produce.

Q: This is very nice, and I hope that the listener can understand this by stepping away a little from the economic dynamic that has unfortunately invaded today's thought form. Moving on to another topic, in the previous interview you spoke of your willingness to intervene to help Gaza in the current war situation. Can you give us an update on what has happened and what the Keshe Foundation has managed to do for the Palestinians in recent weeks?

K- Gaza is a very complicated, both for government and scientists. And we have the technology. How we are involved in Gaza is not that we are sending food packages and trailers full of this and that. We are a scientific space organization. We have developed a technology where, if you want water, I carry the energy of the water to you, to the Moon, you don't need to carry the water. You want a banana, I can send you the energy of the banana on the Moon, you receive it, through a communication system we developed, you taste the banana, you get the energy of the banana, you have the pleasure of the banana.

So, what we came up with was, and we discussed this extensively before, with two military governments, armies, that we do this for the soldiers. And then Gaza came out, and the technology is ready for it. So, we set out, instead of setting trucks full of food, we set up a system in our center in Austria, (:42) where we are going to do it with the scientists or astronauts, we do it with the people. So, we have developed a special system that is dynamic, and it can transfer all the energies for the blood, for the brain, all the antibiotic range, all the painkillers, everything else, and you just put a headphone on and you receive it. And there is a way to receive it. And we made this operation about two weeks ago.

We have penetrated the whole of Gaza. There is more or less, 70-80% of the Palestinians know about this, because we found a way to get into it, we didn't tell no one about it, and a lot of Knowledge Seekers sent us, "Oh, these are the groups", you send us a group, we still use your groups. And then, it came which we knew 3-4 weeks before, we announced it in a very hidden way in the teaching, we knew that the Iranian military has got into the Gaza, actually without arms. Iranian soldiers got into Gaza, without arms, bringing their pots and pans from the military base. They start feeding the Gaza.

Food goes in, we know all the way they are getting the food in, and this puzzled the American and the Israelis, because they thought, that's it, we got it, we're going to squeeze these people to what we get, but how did the Iranian military appear with their flags, and everything else? If you see them when they arrived, they walked in, all of them with the big flags of Iran, and the open kitchen. We are not here to fight you, Israelis, we are here to feed. So, in a way, Israelis tried to block the Keshe Foundation.

(:44) That because we use communication. We went a step into the Space System. We are delivering food in a different way. And now, we have the advantage of the Iranian military inside, has made life much easier. And we would like to leave it at that point, that we don't need to carry anymore pizzas into Gaza. They can have a pizza, margarita, whatever you like, you think of it, you get the energy of it. And Israelis cannot block it.

And this is the next step of technology, which now, we use it for Gaza, we learn, next time there is an earthquake in the north of Italy, you use it for your people, next time is volcanic eruptions somewhere else, we have people, we can't get to the people, they have a mobile phone, you have a mobile phone, we can feed you. You have a mobile phone, you are the richest man, stuck in a cave, with a shepherd behind you, on top of the Everest, you can get fed.

You are in pain, you've broken a leg, we can get you, deliver the painkiller, with your headphone. It's a space technology. Instead of sending your voice, through the new plasma technology, we send the energy of the medicine, and you receive it. There is a technique to it, to receive it. And we have created that technique. We can convert energy of the plasma into the matter energy. And we teach people how to do it. And thanks to the Iranian military, we will feed all the people in Gaza, once our program is completed. And it is going to be a good test, because in China, they have earthquakes quite frequently, every 10-15 years.

(:46) We have huge disasters, military cannot get in, we get people all over the world, flying to help, now everybody knows, open the phone, there is an app, you load an app, you receive, doesn't matter if you're Chinese, in the earthquake, there is an American next door to you, if there is somebody else. This is a change in science. So, Gaza for us is the first test, and because of what Israelis did with the arm delivery technology, so, we bypassed them. We are developing a technology that, it had to come. It had to come. And, the beauty with it is that there are 8 billion of us, there are 9.5 billion mobile phones on this planet. You understand? So, it's not that hard.

There is 1.5 billion every year, and God knows how many hundred thousand adds to it. So, there's [where] the problem is not. But, if you go back to the teaching of Keshe Foundation, some 8-10 years ago, I always said, "If you have two mobile phones, I can feed you, get you everything you need." If you get more mobile phones in the market, every man will have two, even the monkeys in the jungles will carry one, because they found from somewhere, you can feed the monkey, let alone the man.

Q: Many people wonder what will be the first technology to be disseminated to the people through governments of course. So for example, whether the first thing to come to this new world will be new means of transport, new ways of producing energy or something in the field of medicine. What will be the first thing in your opinion and when will it reach the public and not just scientists? (:48)

K- I'm going to become arrogant.

Q: Okay. We'll allow.

K- And the arrogancy comes. You saw Chinese, you saw people from Bangladesh, Americans next to the Iranians, you saw people from Germany, Italy, all sorts of people in the conference. We already start governing with other governments, as a Keshe Foundation. This is the secret. We teach our people how to feed themselves. We teach how to create medicine for themselves. You saw how they presented yesterday, the lady uses the Gans's to cure cancer, and she's a housewife. She understood the knowledge. So, we have become a government governing through the heart and knowledge, not through borders.

So, it doesn't really matter how the governments decide or acknowledge, the acknowledgement came by using it by the people you see, and it's the same all over the world. So, we have our own currency accepted by European Bank Central System, we have introduced our own governing system through Universal Council, we have introduced our own, what we call, the whole banking system which is coming up, everything has been set up. And now, in a very hidden way, we are governing. But through the people, through the knowledge. A few months ago, somebody said, "Mr. Keshe is planning to govern the world." I don't need to plan, I already do. But, people govern themselves. People, we've seen it. They produce air cleaning condition for Taiwan, change the pollution in Taiwan.

(:50) Yesterday we saw Knowledge Seekers we never met before. People come from Hong Kong, they use the technology. This was a Chinese session, we get the European coming up with something else. We've done a huge work with the Italian government, it's in your parliament, dossier is done, how to clean the air, by the Knowledge Seekers. So, we already become a government, we govern through technology and the heart of people. These governments, they need their own time to catch up, and the governments are catching up, very, very fast. Because, people are using it. So, we don't need to be recognized, we are already recognized.

Internet has opened a lot of things, they cannot close the Internet. And so, you go to the governments, what do you need to recognize? Governments are recognized, a guy is a president, if his people recognize him and vote for him to become a president. We govern through technology to people because they use it. So, we already have start governing. But, in a very, very simple way. The secret is, do it with the people, amongst the people, and together with the people, bring the change. And we more or less achieve it. We see more and more, more stronger dimensions in governing. When we launched the Keshe Foundation coin, the European Central Bank objected to it. I had to go 6 months out discussion and interrogation, they said yes, they accept it.

You can go on the Keshe Foundation website, and buy a coin as a donation, not as a coin to put in your pocket. (:52) And, it was approved. Keshe Coin, and the structure of the Keshe Foundation, is a European coin. If you go outside, many people buy coins. There is not a week or a day that we don't see people buying Keshe Coin, they come on the website. And then they come back, months later, years later, "Can I cash my coin, because I want to buy this, or I want to do this, or can you pay my son somewhere else?" People run into problems.

There was a coin, 2 or 3 years ago, 4 years ago, and we had cases, people say, "I bought this coin from you, I'm from Africa, can you pay for my son's education in the United States?" We cash the coin for them. So, start seeing, we are governing, we don't need to be governed. Keshe Foundation has become a total integrated structure, but it takes step by step, step by step, step by step. And we don't need to be recognised by Fox Television, we have already foxed it. ??

Q: There has been talk of space technology and of going into space, even making long journeys, because now this technology that has been presented to us over these last few days, will allow that to happen soon. But at this point, what will be the first, the next challenge of mankind when it really enters space?

K- The biggest problem is humans ignorance. That will be our biggest problem. And we see it every day. A lot of Knowledge Seekers, families, are in fight with each other. Those who become Knowledge Seekers, those who understand they want to bring the change with their wives, with their husbands, because, you know, this is...this doesn't bring bread on the table, (:54) instead of loving me, you're pushing salt in a box, making Gans and these things.

Most of the Knowledge Seekers trying to understand this technology, they have found a mistress. A mistress doesn't have to come in a beautiful lady, or a man you go and see outside. They are at home, the wife says, "blah, blah, blah, blah!" It's not there, it's somewhere else screaming how the Gans works, what is the next Gans, and then it creates a friction in the house. So, we see this. Some of the Knowledge Seekers have become very clever, they bring their wife to... they can't get hold of the wife to bring, they bring the children, and the children, because of the wife, comes in. We have a lot of cases like this.

So, we are going in a direction, that knowledge amongst the people, then, once you understand putting the...making the Gans's, you see the effect of it on other things, you learn how it creates energy, you come to realize gradually, that if these energies are there and are made of it, and it's so simple, I cannot be the only creature in the Universe. We are not the only race. And, it's like a family, it's like different nationalities, each one of us has his own habits, his own ways of living. We accepted that in the village of the Earth, that we are Chinese, Italian, blah, blah, blah... They eat, blah, blah...

Now we accept that others who might not eat food, but they like energy, their cuddle and kisses is different than mine, we accept it as part of the bigger family. The biggest problem is, we are not allowed in this family. It's like literally, you know, when you are a naughty boy, and the mom puts you out in the garden, when you behave, you can come in, we are that boy, as a whole race on this planet. (:56) The Universal Community has put us in the garden. When we behave, when we stop killing, when we stop the fighting, when we become to order that you can have whatever you like, we understand it, then you can come in the house and eat on the same table.

And, so, we are actually the ones punished, we alienate ourselves, then they become aliens. And once we see the way we are going, we can have energy without killing, and everything else, the Universal Community, we are part of it. We are part of the Universe. We are part of the Community of Creation. It's us, by our behavior, not to teach the others to kill and destroy, we put in, out by the mother, you are punished, you are outside, and we stay outside, till we learn the rules. And once we come in, it's a beautiful, warm family. We learn, we teach more.

You're not that naughty boy, you have to give... ?? humanity has got a lot of knowledge, a lot of beautiful things which can actually give to the Universal Community, or Community of the Creator. So, when will it happen? When we stop killing. When we stop wars, when we stop friction, when we stop animosities. And then, because, you know, when you are naughty and learn to do naughty things, you come in the house, you teach the others, and you cause problems, everybody becomes naughty. We are kept out. Till we become good, and then we are let in. And, we are teaching that bit, that, you know, good boys get this, now you freed the cancer, now you get to live with that energy, you settle down, and then, when we come in the community is all there. Life is not the exclusivity of this planet. Yeah? Life is the exclusivity of the Universe, and this Universe has got many families, and we are one of the families.

(:58) But we've been naughty, we didn't follow the rules, to use the energy instead of killing, stealing others energy, we are put outside. Now we are trying to negotiate between the mom and the child, how we are going to bring this child. "Mom, a little bit". Mom says "No, he's got to be a good boy, he's got to be a promise that he doesn't go to war somewhere else, he doesn't make a ??". Now we are in that point with this technology. We are negotiating by knowledge and technology, to bring the naughty boy in, and the mom is playing games, still killing.

When we started the work ??, that with this technology we bring peace, and Chinese especially, they and the many Knowledge Seekers around the world, they start putting Gans's in the rivers, in the schools, on the streets. In Italy, you remember? Oh, I don't know if you were Knowledge Seekers. They went to every fountain in Italy, they put Gans's in it, to change the Italian. And, we bring the change. And when that change comes, we change the habit, then yes, gradually, we get to the point of joining the family. We stop killing. We said, the wars, what we saw in Vietnam, Iraq, all those wars, we promised by 2020 to come to an end. We see the end.

The best thing that happened for peace, for world peace, was Corona. Because we couldn't send any more soldiers, they were scared. Even the soldiers on the same ship, they were not afraid of the enemy anymore, they were afraid of same soldier next to him, he's got the Corona. So, Corona was the best thing for the World Peace. So, now we got rid of Corona, Americans will stop playing, nobody wants to play. We had two years of not killing... You have skirmishes here and there, and soon that is between your beautiful country, Italy, Vatican, (1:00) and the Christians are the same, because the Muslims don't care about the Christians.

So, once that tic-tac between Vatican and the Church of Russia ends, which is now. Vatican accepted the defeat this week. They threw the towel in, as we say. They want the Ukrainians to stop the war, because Vatican cannot support any more payment to get to win from the Russians. This is going to finish. We know Americans lost face in Ukraine. Now, they supported Israel to Gaza, and now they are dropping food on the Gazans. Americans killing more of them by the food, they kill them by the bombs, they kill them by the food. So, now we get into a point, there can't be any more war. This is a religious war which is happening. Jews with Arabs, Muslims, Vatican, what we call, Catholics,

with the Orthodox Church of Russia, which the Russians won now. Vatican has spent all the money on this war, because they thought they were going to really get all the money from the Church of Russia, and now Vatican is going to come with a new trick.

What we see it is because reserves are finishing in Vatican, we know from our people inside, a big part of Vatican money, which was invested, to start the war in Ukraine, which actually paid for it, they knew Russia was going to go into Ukraine, if they do what they did, it's spent. Very soon, you see, Vatican will put Monsignors and the rest on the street. They started, I can give you some examples of it, because you can't afford to pay the wages. So, we come into a point, World Peace is us. The big wars are finished. The religious wars finishes, we are back in the path of peace, and then maybe we learn to become a good boy. Mom says, "I give you a piece of bread from now on, to eat and not go hungry." And that piece of bread is the new technology.

(1:02) We see what we can bring in, we negotiate, we see where it goes. You've got to realize, Keshe Foundation has two sides, one is public, one is private, which we influence the politics from behind and nobody knows. We've done this for years. And we see the Americans are releasing 10 billion last week to Iran, which is supposed to be the biggest enemy. We are going to get another 30 billion released. If you are bad, why do you give us money back? So we are good, because you know what something we have, you are scared of it. We give you something ??. And this is the Keshe Foundation technology coming in.

Chinese are doing the same thing. So, the wars are over. We don't see Vietnam wars, we don't see big wars we had. We have two or three skirmishes of religions, and now religions have no value. We see those in the next few months finish, what is next? We don't have any more eager to fight. Americans brought a lot of soldiers in Taiwan recently, trying to poke the Chinese. We told the Chinese, "Just give us time." In two years time, Americans won't even be able to reach Taiwan, let alone the South China Sea, and so, peace is on the card.

So the next step is, how do we collaborate. It's a lot of things happening, but we got tired of killing, mass killing wars, 50 wars at the same time, was going around the world in 2018. Now we are more or less to 3 wars, and one is Ukraine, Christians with the Christians, and one is with the Israelis, and the rest of the Arab world. Houthis on the sea, it's all launched in one way. And the Americans start paying us as much money, we are such a naughty boy, we pay you to be a good boy, so we accepted 10 billion last week, we accept another 30 billion next week, (1:04) but they don't say we lost, we are going back, but we are paying you to go back.

We are bribing you not to bomb us when we go, make sure the streets are clean and [so] does the oceans. So, we see the World Peace is on the card, because we are tired of it. We don't have the finances to pay for soldiers. And our soldiers, if we get another Corona, nobody goes on the ship. If you noticed, during the Corona, all the aircraft carriers were strapped to the... somewhere. Nobody had anything to go anywhere to do. Nobody could go. No soldiers were prepared, because they were dying from each other, more than their

enemies. So, it's a blessing of God. The best thing that happened to us is Corona because it brought peace.

Q: So, the last question and then we'll wind things up because today is also New Year's Eve and in short we've taken too much advantage of you. If you could take a leap into the future, five years from now, what do you imagine you would see different from today in the world?

L: Okay. Last question, we know you are very busy...

K- Italians have lots of questions...

L: Just for today...

K- ... Can I consult with someone? I have a little frog. Maybe the frog can tell you. Five years is too short. We're looking at 10-20 years time. If what we have agreed with the Chinese, what we have agreed with the Iranians, what we are negotiating with the Americans, don't forget it's just Keshe Foundation, and a lot of proof ?? by technology, a lot of them are scared. (1:06) So, as an organization, we can see what's the next step. By introducing these new technologies, we are cornering the governments in accepting the new technology. Then, if we go the way we go with the nations we are working with, you don't need to imagine, because the technology is on the table.

It depends how slow we introduce the technology. Now, how fast. The secret with this technology is, to what the slowest speed gradually we introduce it, but all the governments agree. It's a big problem. We have now under development a system, which you don't need electric cars. If we put this technology out tonight, and you know the Keshe Foundation has a disease called public teaching, and on a Thursday morning which is tomorrow's teaching at 9 o'clock, we go and teach everybody how to make it, no one, with the right mind, will spend a single penny on a Tesla car. Electric cars are obsolete. No one with the right mind, you saw it in the presentation, we can produce as much gas as you like in a bottle like this, we opened the box, you saw it. Nobody will buy fuel.

The technology in our hand, which some of you sat in it, you didn't know how to trigger it, we didn't show you, we sent people in the system, but we didn't tell people how to trigger it. And, 3 or 4 people who triggered it, went into different conditions. But they partially triggered it. (1:08) So, you can go from here, the system is here, we don't need to develop it, but we have to tell you which press button, we gave the switch, but we thought, how people can switch, to elevate, or stay, or go down, everybody went down, a few people tried to jump, they got hurt. So, you can go from here to Washington in a few minutes, a few seconds.

We have to sort that out. It's not just the energy, it's not just the car, it's not just the national security. How fast the government accept that a thousand American soldiers can be sitting right in Tenement Square with the flip of a finger, would the Chinese put ten thousand soldiers in the oval office, that half of them are on the street, change the

government. Would we get idiots like Netanyahu, having this technology, going for everything which his little brain can absorb, and create more problems.

The problem with us is how slow we can work with the governments to bring these things step by step in, but everybody knowing that the steps are there, that they are coming in. And this is how Keshe Foundation has worked. You've seen the Knowledge Seekers. We teach them how to do, push the public. You saw the Chinese government officials, military here, we push them from there. Somewhere, we open the two together. The same will go with Iran, the same will go with the United States. And then, we use this gradually. You don't want to put... how many people Tesla employs? 10,000, 20,000 people on the road? Yeah? (1:10) How many thousands of people oil refineries and gas production goes? We have to find alternative situation, alternative border control, alternative agreements that we don't have governments to tax us and create different regimes.

We agree, one taxes doesn't matter, and taxes doesn't need to be with the payment you pay, it's a service. You provide the service, that's the service. There is no wages that controls you, you are worth 10,000, I'm worth 2,000, is you provide me all the necessities of my life. I live a comfortable life. And I do my best, and I serve the nation, I clean the street, I serve the doctors, I research in how the other people be. When we get to that, government needs to organize. This is why we brought the gold. The gold is a, you know, the stick. You don't go where you want to go, we tell everybody to make a kilo of gold. You don't go the way we don't want, you don't want to go, we teach everybody how to make energy for rice.

American farmers go bankrupt tomorrow, there is nobody who wants rice, because they can make it in the house. And, the proof of it is, all of you Knowledge Seekers, received the Gans which is produced by a small farmer, and you can imagine how much his harvest has increased, and he sent nearly 100 kilo, 200 kilo, as a gift for the knowledge. So, we need governments first to agree. How we teach everybody to do it, but we bring it for everybody to understand, because then, ruling becomes not a United Nation, but it becomes One Nation, which is united. (1:12) And then we run. And it needs time. Educating needs time.

People agree it has to be sorted. I'm more important than you, I'm wealthy than you, so if you are wealthy, that means a problem. I tell you a story, and I stop. You know Keshe Foundation, and me personally, we have enough wealth. And, you know, we came, some of the Knowledge Seekers came to my house, in the Cinzano. I lived in a nice house in the Cinzano, which, as part of the house, we allow the Knowledge Seekers, actually the first Knowledge Seekers education was done in the building in my house area, where I lived. And, we came across one of the richest families of Italy, who live in the North, they control you know, what is all the machines which makes all the socks in the world, you know what I'm talking about.

The gentleman, 75, 76, married a 30 odd year old young girl, and you carry a doll, you pay for a doll. So, they had a child, the same age as my son. We came to know them

because they went to the same private school in North of Italy. We were not happy with the school, they were not happy with the school, we decided we open the school. She said, "No, you don't open the school. We open the school, then your child can come." So, she came, we said, we invited them to arrange how to open a school for children like us in North of Italy. When she came to the house, she saw where we live, the way we live, she said, "You are much richer than us, this is not acceptable."

(1:14) So, what she did, because we agreed, they opened the school, I can give you the name of the school, and then when my child went there, after two weeks, she said, "He cannot come." She says, "You are richer than us. He cannot come. I wanted to show you, we got more power than you do." This is the intelligence of the Italian woman, married to one of your richest men in Italy. So, if a stupid wealth is the reason of a child not being educated, we need a lot of educating those people who work through their brain and their clothes. And this is the problem. This is where we need to educate. Position, status, fake. And this is what we say, I always say. I learned a lot from this experience. That how narrow-minded the wealth has made a poor girl who has married a rich man, to decide, "I want to show I'm wealthier than you, because you live in a bigger place."

So, now you see how slow we have to do. Our problem is not uneducated, our problem is the richest who want to stick to the power and the money, which actually has no value anymore. And that's where the problem sits. Five years, ten years... I can make as much diamond as you can, because I know how to make in the kitchen, and you know the same. So, where does it come how fast, how slow, how much governments, the governors are allowed to lose control, because they are called the President, the Prime Minister. Those are the problems, not the ordinary people. How to convince them to let go of the seat of power. Fake power, but ?? (1:16) That's the limitation.

Tomorrow morning, we've done this before, it's not something new. We run a 5 day Blueprint, how to make gold. I promise you by next week, all the banks will be flooded with gold. We spend 5 days, how to make space fuel. We've done this, it's not something we are going to do. In 2017, they spent a week showing how people make an energy system, called MaGrav. They're still after the energy coming from the plug. If you went in that room in the back, there's over 14 MaGravs running.

But, our technology, how come we can make it, we can fly with it, we can produce gold with it, and you lot can't? Because we didn't teach you. That's the speed, how much we get the government, that's why we negotiate with the government. Let us people have the knowledge. We get the patents, the key, the knowledge in 2011, 2012, told the governments, they didn't share it. 2016, we opened the patent. Everybody knows about it. We did the same with the MaGravs, 2017, we opened the MaGravs in Italy. It takes me 10 minutes to show you how to make 200-300 kilo of gold a year, and see what happens. But, we change the economy. Governments won't be allowed, and I'm sure by tomorrow night, I won't be alive. Because the next time is the energy, the gas, and the... So, it's not how fast, it's how we change the leaders, and that's why we negotiate with governments.

Q: Thank you. Thank you very much. (1:18) For all those who want more information, in the description box below this video you can find the link to both the Keshe Foundation YouTube channel and the Telegram channel for Italians, where you can interact, ask and get some more information. Goodbye everyone, thank you for being with us and see you in the next video.
