

# **No "C" in $E=MC^2$ - Light M field & Bends Travels as Spiral - Microplastic Removal - Create Magnet for Anything - Government Love/Hate KF - No Toothpaste**

## **Introduction to 565 KSW**

Note: Not checked by KF interpretation by KS of KF Brazil

The main teaching in today's workshop seems to be correcting our understanding about light. First of all in Plasma Science we consider light as a M field and the way I understand it is, that we don't actually see light unless it interacts with other fields, and that interaction gives off energy we see in matter state, and we call that light. When we start to study even a little bit about light we quickly feel that there are major problems and confusion in what scientists teach as facts. The two major fallacies are that light doesn't bend, and that the "C" in  $E=MC^2$ , which is called the Constant Speed of Light in the Universe (U) is not true. There is no constant speed of light in the U because there are M fields all over the U that will interact with it. Humanity had to start somewhere and so people made up these ideas so we could talk about them and learn more. But now they have become false facts and are holding us back from understanding how the Creation truly works and this is keeping us from traveling the U.

It's not clear to me what Mr. Keshe meant when he said, it's a fallacy that light bends when going near a supernova. Remember a supernova is when a star explodes and releases huge amount of energy. In a way, it makes sense that the light as a M field would bend near a supernova because of the stronger fields. But then he said, this would be true if there were no other M fields around, but the U is full of M fields. He never finished telling us why. If we think about it, when there are so many M fields around the only way a light could travel straight is if it had some kind of shielding. He talked about this years ago in the context of shielding for a spacecraft traveling at magnitudes beyond the speed of light. But these ponderations are only for considering light as a matter state photon. He said, light actually travels like a plasma, as a spiral. This is where he gave the example of traveling in a straight line from A to B taking 100,000 light-years in the matter state, but as a M field it travels as a spiral and arrives instantly. The Plasma Science of KF has contradicted everything we learned in Physics.

The other thing that we can observe is the light appears to be traveling in a straight line because we don't see the bigger picture of how long the arc is. In other words, the arc of the light traveling on the spiral is so long that it appears to us as being straight. But it is not. Does this mean that the light from the stars we see at night is traveling in a spiral to get to Earth? I don't remember how it works. Are we seeing the light of the stars as its M field interacts with Earth's atmosphere and then the amino acid (AA) in our eye? The main point is that, in transmutation we travel along these M fields that we think of as light and they actually travel instantaneously in a spiral. Otherwise, our mind will tie us up with  $E=MC^2$  and we'll put a block in our thinking, which will create a doubt in our

emotion. This is why Mr. Keshe is trying to breakthrough all of our wrong ideas about life and how Creation works.

Before Mr. Keshe talked about microplastic I only thought it existed as those plastic bottle islands in the ocean he discussed some years ago, but now we find out that it is everywhere including our body. We posted an interesting article from "TheConversation" website that gives a good background on it. Microplastic is categorized as a piece of plastic between 1 micrometer and 5,000 micrometers, or 5 mm, which seems quite large. And nanoplastic is microscopic you can't see with the naked eye. These have broken off or have been shed from larger pieces of plastic. Researchers inserted microplastic into mice and found behavior changes within 3 weeks. It's been found all over the human body and what surprised them was that it can cross the blood brain barrier into the brain. It seems they don't know anymore then this. The annual global plastic production will reach over 1.1 billion tons by 2050, and of all the plastic discarded so far, some 14% has been incinerated and less than 10% has been recycled.

We are surrounded in plastics and they automatically shed off nanoplastic particles that get into the water, air, and food, and we drink, breath and eat these particles and that's how they have become part of our body. He even said, when we carry things in plastic bags they rub against our skin and create a heat and get absorbed into the body. Scientists are just beginning to study this problem and they are afraid to say too much, because they don't know much and will start a panic. This is something they should have thought about at the beginning before they started mass producing plastics in the 1950's, but due to ignorance, arrogance, and all the money being made nobody wanted to talk about it. Now it is too late, we are trapped into it. Thank God for Mr. Keshe and the Plasma Science because this will be the only way we can handle this massive global health problem other then to continue denying it.

From the point of view of Plasma Science plastic is made mainly from petroleum and the C - H bond links it to the AA or the COHN. And inside the body it is in the plasma or energy state, and that's why they don't detect it until it converts into matter state. When it gets in excessive amounts it can convert to like a plastic bone, or accumulate in the brain like the plastic bottles do in the oceans creating "plastic islands." As it is in the energy state and the body recognizes the C-H bond it thinks it is sugar or carbohydrates so it looks for a place to store it, to use its energy in the future. The intelligence running the body is quite amazing. It seems that when the liver and kidney can't store it, it goes to the brain. And as we read earlier, science has confirmed that it can cross the barrier into the brain. In the brain it starts to accumulate in excess and manifest in the matter state as pieces of plastic, or what they call, microplastic. These matter state pieces they pick up on the MRI. They say that plastic is embedded in the brain up to about 0.05% of the mass. The reason the scientists are surprised to find it in the brain is because they are looking for it in the matter state. But we know that it is the energy of plastic that crosses the brain barrier and then manifests physicality (P) on the other side, and that's when they detect it.

The scientists have observed behavioral changes in the mice, but in humans they haven't studied it enough to know if plastics are causing diseases like Alzheimer's, dementia, and other brain diseases. The other problem is they don't accept the idea that plastic can be inside the body in a plasma energy state, or what we call a Gans. They only allow themselves to look at the matter manifestation part, so it is highly unlikely they would be able to find a solution for it, other than to stop plastic use on the planet, which at this point seems virtually impossible. As Mr. Keshe said, if we don't solve this problem in the future many of us will die from it.

How can Plasma Science solve the problem of microplastic? Quite simply by transferring the "plastic energy" out of the body. KF has already proven this by transferring a metal piece of shrapnel outside the body. The metal must have been converted back into the energy state and then transferred outside the skin where it re-manifested as metal. It sounds just like the transmutation process. It's very important that 10 to 20 Knowledge Seekers (KS) come forward and join this new research. Participants will be asked to purchase the Twin set of Gans's called, "Microplastic" Gans, and they work as a Twinity. Instead of building a system for this, he said, he created a Twin System to move the plastic energy, and this Gans has a very high energy to move the plastic.

There are different ways the plastic can be moved outside the body. One is that you might find little pieces of plastic appearing in your hair or on your skin. These should be collected and sent for analysis to confirm if they are plastic. Another way is the body could set up an infection scenario where it creates a spot on the skin that looks like an infection and has pus, but inside it will be a little grain of plastic. Participants have to be very observant during the process. Also be aware if your skin itches, and then suddenly there is a little piece of something coming out. Don't deny it, but confirm the process and understand how the plasma fields work. Also you have to pay attention to how your emotions and wellness change as you go through the process.

When this research gets proven we'll be able to go to a place where they will remove plastic from our body. It's interesting to think about. Maybe when people are not feeling very well, they will go to a plasma clinic and have grams of plastic removed from their body. One thing this shows is how interconnected we are to everything on this planet. He said, an even better way is to have a system that will continuously remove the plastic from our body. This is actually the way the body itself works. This is the job of the liver, kidneys, and intestines, but the problem is our body has not yet evolved enough to recognize the plastic. Maybe in a hundred to a thousand years when it recognizes the plastic it will create a place in the liver that will convert and remove the plastic from the body. We have to use the Plasma Technology until we reach that time. Or maybe there is a knowledge that can speed up the process of evolution.

KF has already developed the technology to make a magnet for anything including plastic. In popular understanding we only think of magnets as being able to attract Fe, but in fact it can repel also. The G fields are attraction and the M are repulsion. The plasma laser works on repelling the M fields. To pull plastic out of the body we have to create G fields at the same strength as the plastic. But if an asteroid is heading towards Earth we

would want to match the M fields and repel it. It's all about understanding how the fields interact. When Earth was created its G field strength Inertia was at the level of Fe, this is set and cannot be changed. At that time the Inertia determines what materials can be created on this planet, and what will be repelled through the M field strength. He said, it cannot be changed, but does it change itself over time? He gave the example of Saturn, which at the moment is mainly at the strength of Helium that can be seen in the color of the light it emits. When Saturn reaches the position of where Earth is now as it travels towards the Sun, will its G field Inertia change and allow it to have a solid surface?

KF has the knowledge and technology to create a system that can attract or repel anything they want. In other words, they can create a M or G field force at the correct strength of the object they want to move. Since everything is made of M and G fields this would give you a power over the material world that all the governments are trying to get through weapons technology. Therefore, he will never reveal this technology to anyone on this planet at this time. This is part of the Space T and KF needs it for their work.

The power of the knowledge of KF will be given to the Iranian Leadership in its path to bring Technology in Exchange for Peace (TIEP) across this planet. At the same time he asked the new American Administration to help in the process of bringing peace. In addition, he offered the Americans an opportunity beyond measure. If they will pursue peace he can give them the MaGrav Positioning systems for automobiles, since the Chinese have refused to implement it. This would again give Americans 80% of the world's automobile market that they once had in the early days of the Ford car manufacturing. He made it clear that the Tesla electric car scheme will never work (and will severely damage the environment).

Mr. Keshe was asked about release of the technology in terms of transportation, and he replied that if it were left up to him he would release in the next 6 to 12 months. Then he went over the current situation with different world governments and how they both love and hate KF. The Americans would love to get their hands on being able to make rare earth materials, because then they would be free from the Chinese restrictions. But the Chinese would hate KF because they spent the last couple of decades and billions on capturing 95% of the worlds rare earth materials as a way to control the Western economy. In especially Europe they are creating a lot of racial hatred towards Moslems and whomever, so they don't want them appearing in their countries with the plasma transportation systems. The bottom line is the governments have built up very precise ways of controlling their citizens, therefore they will try to stop anything that will make them free and self-sufficient. This is what we are up against and we all need to understand it. And then instead of complaining that Mr. Keshe is not doing this or that, we should get our undivided attention and Intention behind him and for world peace, so that we can release the plasma technology. Nevertheless, he assured us that the technology is "siphoning up" and slowly spreading across the world. We as KS have to stick to Ethos of Mitra and increase our Intention of wanting to share the knowledge and be free. And not the attitude of wanting the "free-energy" for ourselves so that we can do what we want. This attitude does not work with Plasma Technology and the Knowledge of Creation.

Unfortunately, by losing the election, that internal faction is trying to take revenge by creating more war as we have seen in the Middle East, and now with the threat of using 'nuclear material' in Ukraine. This will bring us to the brink of total annihilation of the Northern Hemisphere. Even though Africa won't be bombed directly, they will be destroyed from the radioactive fallout. Africa is where humanity started and after millions of years they will come out of the holes to repopulate the Earth, but they will have a greater tolerance for existing in a radioactive environment. The Media is not telling us how close we are to that point. Hopefully, we won't reach it.

There are a number of things we do in the modern lifestyle that can cause diseases like cancer and other things. Some examples are using toothpaste, the new talc powder spray, deodorants, antiperspirants, cosmetics, and Carbon Fiber sportswear with flashy Carbon colors. And especially bad for spreading disease are open rolls of toilet paper stored under the toilet or near the toilet, and the toilet brush left next to the toilet. These are talked about in the last 30 minutes of the teachings and you can listen to it and determine if your habits are putting your health in danger. One thing is don't expect your doctors and dentists to understand what is being said here, and they most likely will laugh at you. This knowledge comes out of understanding how fields transfer through the plasma condition. It's up to us to understand and protect ourselves and our children.

In a brief summary we know already about the toothpaste. The body has intelligence and has a way of measuring how much nutrients it needs from the food. The moment we put it in our mouth it enters the Gans plasma state and the tongue and the back of the throat are equipped with sensors that the brain uses to tell the body what is coming in, and what needs to be removed from the body through the liver, kidneys, and intestines. So when we put heavily concentrated chemicals into our mouth with toothpaste, the brain starts telling the body to remove old stocks of elements from the organs and other places to make room for the fresh elements coming in. This is all done at the MG field level. So for example, if the toothpaste has the concentration of 10 times the Ca as is in vegetables or meat, then it starts getting rid of it from the body in heavy amounts. Then we spit the toothpaste out, and have tricked the body into depleting itself. This is exactly what happens in Bulimia in young girls. Only it's worse because the nutrients are in the stomach already and then get vomited out. So the body becomes depleted and this matches with the symptoms the girls have. It's about understanding how the body and life actually work, and not what people think and say about it. This is from a deep Knowledge of Creation.

I understood that the problem with cosmetic is like what happens with microplastic. The body doesn't have a way to process and eliminate the chemicals in cosmetic that are absorbed through the skin. The perfumes and fragrances work on the level of changing the emotions. At first you can be happy from smelling them, and then later get depressed and not know why. These things are all happening on the field transfers of plasmas and don't forget the emotions are fields too. If you have a lot of doubts whether this knowledge is true or not, then the next time you use these things try to observe your emotions, moods, and energy level. Become the experiment yourself and discover how

your body actually does work. If we do this beforehand, then maybe we don't have to go through the lesson with certain diseases. Like a loving father Mr. Keshe is sharing precious knowledge with us for our own benefit. At the end of it, we are responsible for what we do with our lives. But at least now we have more knowledge to understand it. And one last thing. Everything we eat touches the emotion, and the emotion causes cancer or brings us joy.

### **Other Topics:**

Environmental Cancers make up about 20% of all cancers, emotional cancer is 60% or higher, and then there is evolutionary cancer which he talked about before that occur when Man goes through changes in his structure to adapt to new environments;

After 20 years the Oasis system has taken a new step into the dimension of reality. You can see the photo, it's about the size of a small cylinder and it will produce all the needs for living on this planet;

There are some instructions or guidelines for how to fast intermittently and not damage the body. Starting the day with 25 to 50 grams of pure butter will strengthen the heart muscle, which is also a generator of M fields for the body.

Magnesium Gans with its AA is the best thing to change emotions.

Thanks for listening.
