

In-depth Teaching on M Fields & Interactions & Measurement - Nuclear Decay - New Space Fuel - Introductions from Brazil - License to Make Products - Omega 3 Introduction to 580 KSW

Note: Not checked by KF interpretation by KS of KF Brazil

Today is an in-depth teaching of magnetic (M) fields and more about how they interact and create the Cosmic Rays (CR) and the translucent lights we see in the Universe (U). Mr. Keshe said the reason he wanted to teach this now is to show how we are connected to our Creator and that when we understand this we won't need intermediaries like the religions, which have abused the Soul of the Man (STM) so much. Knowledge Seekers (KS) who want to transmute need to have a better understanding of M fields because that is what we will be traveling on in the U. Everything has been put in the drawing that he started making around 23 minutes and slowly he expands it and keeps coming back to this drawing as he adds more knowledge to it. Therefore, it is important to follow along with the drawing.

He started out with what our scientists know about M fields. If you look up magnetosphere and magnetic field maps of the Earth in relation to the Sun on Internet you get part of what he drew, because their ability at this time to measure M fields is very limited. They show the circulating fields from the South to North Poles and a tail of fields flowing out the back of Earth in the direction away from the Sun. Mr. Keshe adds a returning M field on the back side, which makes a feedback loop into the Earth. Later we'll find out that this feedback loop is important for the Earth to create emotions and have an appropriate response to how it interacts with its environment. These are two of the basic types of M fields we see with the Earth, a circulating field and one that flows out the back. Then he drew more types of fields. There are fields that connect to the Sun, other fields that go out into Space, and then there are fields that connect to the galaxy, U, Unicos, and to the Creator. These other fields our science has no understanding of. As the Earth is a plasma it is connected to everything. But for learning purposes we are making these distinctions so that we can use these different fields for traveling the U, and creating things that we want. These fields are not only for communication but they are a source of energy and creation as well.

He put some questions that the scientists don't know how to answer. Why is there a big difference between the distance from the center of Earth between these two types of fields? The fields going out the back are much farther away than the ones circulating around. Then there is the question, since the M fields also flow in the back of the Earth why is only daylight on the front side? That's a good question, why don't we have 24 hour daylight? Because remember we already taught before that it is not the physical light of

the Sun that lights the Earth like we think. It's actually from the interaction of the M fields of the Earth and Sun. The aurora borealis or Northern Lights at the Poles is due to the compactness of the fields interacting with each other. If we get a chance to see these lights we can remind ourselves that we are witnessing the interaction of M fields that are causing light to occur. This is the same way our daylight, CR, translucent lights in Space, and sounds are made. Actually everything is made this way, because it is the rubbing of two M fields.

One of the main problems we have in accepting this new knowledge is because of what Einstein said about the light not bending. Every time Mr. Keshe tries to explain this to men of science they all seem to get stuck in their head with the idea that light cannot bend. And yet when they show the magnetosphere maps of the Earth they show the M fields bending around the Earth. Well then they say, light is not M fields. But in Plasma Science we know that light and sound are M fields and all of them can bend.

The next topic is a little harder to follow, but we'll try our best. First of all he compares what is happening with the M field tail flowing off the Earth with nuclear decay. In general, nuclear decay is when the atomic structure develops too much energy and become unstable, and radiates energy and loses neutrons (N) and protons (P). He compares the atom to the solar system (SS) and the N to different planets like Jupiter and Earth. Then he draws the N and P, and there is a M field tail coming off the end of the P. So is the N like the Sun and feeds the P? The way I understand it is through interacting with itself the N gains too much energy and becomes unstable and pushes the P out on its own to become a separate entity. Isn't this the same way a child is born? An important information that we didn't know is that each of the neutrons have their own M field strength. They are not just a bunch of uniform balls in the center of the nucleus. And if a N is added to the nucleus it can act like a P. Does that mean it pairs itself with another N in the nucleus? All this points to consciousness and intelligence and not just some inanimate structure we call a N. This makes the whole science alive and unpredictable, and most likely they have and create emotions.

Another aspect of M fields that we should be aware of is, that they are constantly rubbing against each other just by the act of them traveling through the U. The way I understand it is that every M field coming out of the Creator has a G field going back in at the same time. This is because all the fields are like a circular loop and to be able to flow one has to go out while the other one comes back in. If you study electricity that is how it works. And this very act of movement causes friction and rubbing and they generate new packages of energy, which we never considered before. It seems that this applies to all plasmas and that's why he mentioned the current and eddy current, which means that current is actually flowing in both ways. But that doesn't make sense to us, so we only consider the strongest flow and say, that is the way it flows. We haven't been taught what flowing in both directions at the same time exactly means. We can keep it in the back of our mind for now. The translucent lights and noises we hear in the U are from these interactions which are in a way, general fields that are always traveling the span of the U. They are not part of the fields of the SS, galaxies, or universes. For some reason he wants us to be aware of these fields when we transmute. They are fields that potentially could

become part of a new creation and would be a source of energy. And it could be that these fields come directly from the Creator and haven't been used yet, and therefore we could jump on them and ride back to the Creator. So in way, we could consider these as stray fields, but not really, because they come from the Creator and haven't been used yet. But the main point seems to be that they are the cause of CR, translucent lights and noise in the Unicos, and it is for us to be aware of them.

There used to be a TV program in the 1960s called, "Lost in Space." In today's teaching Mr. Keshe showed us how to find our direction when traveling the U and to do that, we would have to know how Creation takes place. A plasma always has an Energy Center we call the Soul and then through interaction of the fields it manifests a physical D. If we start with our SS then we can take it back to the galaxy, U and to the Creator. The side with the strongest M fields, faces the center of the plasma or Soul it was made from. The brightest side of earth indicates where the Sun is located. And if we get out of the SS then the brightest side of the SS will likewise show us where the center of our galaxy is. If we can get outside of our U and determine which is the brightest side then we will know where the Creator is in the D of P.

Obviously, at some point we are going to have to learn how to measure M field strength to use them, as the current magnetic measurement of matter state, or Tesla's, doesn't even fall in the scale of the Universal M fields. He assures us that there is a common denominator (strength) that connects us to our Creator and it can be measured. Because if it cannot be measured, then it cannot exist. This is referring to matter state existence. So now we know the center of the Creator has a location, and His M fields have a known measurement. I wonder if this measurement is of the fields we talked about earlier that continue to travel the Unicos and they are the ones that have not become part of a galaxy or U? These fields go directly back to the Creator and are circulating through Creation like a dog chasing its tail. If we get on one of these we can go directly back to the Creator. Is this the Enlightenment? We should also remember that this measurement has to do with how the Soul feels these fields of the Creator, and not a matter state instrument, though we probably can still make an instrument if we wanted to.

All plasmas are made the same way, whether it's the cell of our body, a cell of a dog, stone, alien, galaxy or whatever, they all have the same property and the same direction of motion of the fields. I made the whole U in the image of Myself. If I show My image in the emotion of the Man it means I also have to have emotions. Dogs and stones also have emotions. The Soul of a stone interacts in its atomic or plasmatic structure with My Soul, and that gives it emotion.

The year 2025 is destined to bring the Promised Day, which was promised in the Holy Books. At this time there will be no more wars and the lion will lie down with the lamb. The only way this can happen is if a new science and technology is shared on Earth where all its Beings receive energy directly from the M fields of the U. This is what the KF has already developed and is waiting to deliver it to humanity when we can stop the wars. Mr. Keshe said this time has come and there are leaders who want to bring peace and now is the time we have to give them a helping hand with new technologies so that

the war industry can be switched over to a peaceful industry of Space T development. If we don't do this we'll go back to creating wars within a short time, because the weapons factories have not stopped producing weapons. They continue to stockpile them for the future wars. Another surprise is that he has an even newer plasma technology that he calls, "Space Fuel." With this fuel we will be able to travel the U and also achieve all our needs here on Earth. This is why he has started calling all professionals in the Space Agencies and others to join with KF and bring the new T out. When all the resources that were used for war, are put into Space development man will mature quickly. And us Knowledge Seekers (KS) have to do our part to spread the T. We should not be ashamed of what we have learned, nor afraid of what the others may think of it. Every time something new is introduced to humanity we have to go through this transition period of acceptance. We are fortunate to be the first disciples of the new knowledge and he has asked us to do our part in sharing the knowledge across the planet rapidly. Behind all of this Space research and development it is for the STM to search and find the path to the Creator. And if coincidentally or by accident any of us manage to see the Creator, since nobody else will be able to replicate it, because each have to find their own way, the others won't believe us. Isn't this how the saints and sages have been treated throughout history. During their lifetime they were not accepted, it was only after their death that the people realized what gift they had given to humanity.

A graph was recorded live during the teachings and it showed the STM and STP without any differences, which means everyone's Soul was touched and resonated with the teachings. It also means the KS are ready for maturity and man is ready to bring the change. I wonder if the systems are picking up one of these direct M field lines from the Creator. He said, the knowledge is coming on a direct path from the Creator to the created. We hear by voice, but the Soul of the U hears it by the Soul. The emotions are battling to create the change. And when our Soul grasps the knowledge then later on we get enlightened to it. The importance of the emotions came up again today and that in the U there are (countless) emotions we have no awareness of. He said, he gave us this new Emotion of Transmutation and it is a Universal emotion and it is stronger than love. What I understood is that the Creator transmuted into us through this emotion, and we transmute back to Him with the same emotion.

Just because we understand the science of Creation does not necessarily make us a "Man of the Creator." (Or does he mean a spiritual man? Maybe he is implying that we can use the T without having totally realized the love of the Creator and Creation). It only makes us wise to travel the span of the U and enjoy the beauty of the Creation through the Plasma. But we have to understand how to connect the plasma to our Soul and receive the field strength we want and need to manifest ourselves in P. We can travel without the P and then manifest where we want.

The energy of transmutation and the composition of fields is different for each one of us and our systems adjust to these differences. We have developed a 'Space Frequency,' which doesn't exist in your vocabulary. These sinusoidal graphs don't exist in the plasma of the U. It has its own shape and if you can create it, then you can achieve transmutation.

You have to find the frequency of where you want to go, for example the frequency of planet Zeus.

He said, that if he would put Vitamin D in his technology and deliver the fields to everyone then nobody would become ill and doctors and pharmaceuticals would have no patients. It's because he would transfer the emotion part of the Vitamin D to us, which is something that our medicine cannot do. There is a big mystery about this Vitamin D and why it is so fundamental in delivering the complete energy the body needs. The tablets they put in milk and other foods must only be a small part of it. Then he went on to discuss about the difference between Omega 3 and Omega 6. The animal produces Omega 3 when it feels free, whereas when it is caged and imprisoned it creates Omega 6. So what we buy in the store as Omega 3 might really contain mostly Omega 6 because it depends on the emotion of the animal and this cannot be controlled when they are being mass produced in factory farms. The emotions are transferred to the oil which gets put into pills. When we eat a chicken whatever emotions it has gets transferred to us and we might feel the depression of the animal. But it's relative to our overall condition, and a lot of other things that might be going on in our life. The counterpart to Omega 6 in plants, herbs and fruits is when we use fertilizer on them. And the counterpart to Omega 3 would be when they use natural fertilizers. If we think about it, a plant is stationary and an animal can move around. By forcing chemical fertilizers and other things on them, it's a kind of imprisonment of their physicality, and then they are forced to grow bigger. But there is much more involved in this, like how do they create emotions, and how is it related to what they take in from the environment.

Mr. Keshe gave a high recommendation for the work Rafael and the Brazilian team are doing to get the teaching out to people worldwide. He said, it is the first time he saw what we are doing and the summaries and Introductions of the teachings are brilliant and they capture the essence and Soul of the teachings. Of course, there are mistakes, but that is normal and what is important is the sincere efforts they are making to try to understand the teachings and share them with others. He thought that maybe they were done by AI, but that is not the case. They are the interpretations of a KS and they have not been checked or approved by the KF. They are good tools for those who want to study the plasma technology. The KF Brazil website contains the word for word transcripts of the KSW, then a Quick Index is made to summarize the teachings in easy to read English especially for those who are not native English speakers. After you have read the Quick Index there is a Topic Index which only includes all the different topic Mr. Keshe taught. It's powerful and one feels a lot of energy just reading it. The Introductions are as Mr. Keshe said, a summary of the essence of what a KS understood the teachings to mean. The list goes back to 440 KSW and before that we were doing more general summaries called, "Key Phrases and Key Words." If you are serious about studying the technology then please come and visit the website and don't be intimidated by the size and start somewhere.

There was an invitation for those who are illegally making KF products like Gans's, MaGravs and the rest to join back to KF and get a license and be taught how to correctly make the products so they work. You will get certification from KF and can use the logo.

There is a big push now in 2025 to bring the T out to public and it would be a great service to humanity if people would join in. You don't have to have a factory you can continue to make them in your garages and homes. It doesn't matter if you are a housewife or whatever as long you understand enough to make them correctly and love the technology you can participate and maybe one day run a factory of your own. There will be more announcements about this in the coming weeks.

Other Topics:

A lot of people in the West are brainwashed with something else, but we see the reality and what is about to happen. The tools of war will be changed to the tools of peace, and there are world leaders who will support it;

In the new Plasma T coming in, calories don't mean anything, because you work with the fields of the plasma and don't need to take in matter state, or calories;

The MaGrav is like a Black Hole in the U and if you know how to connect and use it, you should have no problems. It will take man centuries to understand the MaGrav;

Thanks for listening.
