

# **How Gas Converts to Matter - CO<sub>2</sub> to a Tree & Body & C<sub>14</sub>/C<sub>16</sub> - H & C Universal Pattern of Life - When Soul Present in Fetus - T to Resolve Emotions - Weather Control**

## **Introduction to 640 KSW**

Note: Not checked by KF interpretation by KS of KF Brazil

Today was one of those teachings that only lasted a couple hours in physicality (P), but is loaded with deep knowledge and understandings of how Creation takes place. As Mr. Keshe said, this knowledge is beyond human understanding and is in the dimension (D) of the emotion of the cell. And it will take Man thousands of years to understand today's teaching. But let's see what little we can unravel.

A couple of decades ago a scientist did an experiment to find out how much of the soil is turned into a tree. After 10 years he surprisingly found out that the answer was none. But what does that mean in terms of matter state science? It means that CO<sub>2</sub> gas converted into the matter state Carbon (C) of the wood of the tree and all its cellular matter. The atmospheric gas of CO<sub>2</sub> becomes our trees and plants. But wait a minute, everybody has been made to be afraid of CO<sub>2</sub>, and now you are telling us it is a source of life on this planet? This puts a 'crack in the Wall' of what Man calls knowledge. This is such a huge evidence that everything is made of plasma, the way KF defines it, and maybe that's why the scientists have ignored it. It goes the other way too. When we burn the wood we turn the matter back into gas and we are left with the charcoal, which is C. There is a lot more to understand, but this is a huge revelation to start with. It all depends on how we want to interpret the world we see, around us.

In the beginning Mr. Keshe taught us how the fields of the Sun interact with the fields of the Earth and become the life on Earth and us. Since our knowledge has increased he said, that actually the fields of the Sun are only a part of how we are created. In fact, the Sun's fields are too low in order of strength, to connect with the Soul of the Man (STM). That means that the Sun is more responsible for the creation of our body, and the Cosmic Rays (CR) are what creates and feeds the STM. He said, that the Soul of the Physicality (STP) is the emotion of the Man, but other times he said, all three have emotions. It's my understanding that because our Sun is of a lower order this has led to humans having the two aspects of the STM and the STP of the Man, living in the same body. But how are they able to function together? This is where the C and Hydrogen (H) come in. From chemistry we know that all biological structures on this planet are made of C and H chains, what we call organic organisms. In Plasma Science we know that H is the Line of Connection, and C is the Line of Communication and together these two give us the P. In the past KF has shown how we can change energy into gases, and now we see how Nature is turning gases into matter, but it is hidden in the structure of Creation, and we

haven't understood how this works until now. That's why when Mr. Keshe travels around the world and teaches Plasma Science he demonstrates it through a leaf from a plant. The leaf is made of two different Nano materials on the top and bottom, and in-between creates the M field strength to convert CO<sub>2</sub> gas from the atmosphere into the C of the plants and trees.

The plant decides what it needs from the atmosphere by the distance gap between the two sides of the leaf. The CO<sub>2</sub> is not just C & O<sub>2</sub>, it's a plasma with a spectrum of M field strengths that we call isotopes, because each field strength manifests a different molecule. The Soul of the plant decides what it needs from the environment and that determines the space gap and what will be produced for the plant to live. Then we have to add in the fields of Inertia, gravity, and everything else needed to create these different isotopes of CO<sub>2</sub>. When scientists do analysis of a plant they see these different chemical compounds, which are made from the different isotopes of CO<sub>2</sub>. The isotopes all keep separate in the same way that water and oil don't mix. These different field strength of CO<sub>2</sub> get layered on top of each other in the environment. We see this as the 'tree line' on a mountain, above which, vegetation cannot grow. Then on the other side going down towards the sea level we see different spectrums of the strengths of CO<sub>2</sub> which correspond to the different types of vegetation that can grow from that particular strength. The Botanists have mapped out these different layers of vegetation. These layers are also due to what he calls, the compression changes of the CO<sub>2</sub>. We get compression of the water and light and that affects what the plants can absorb as fields, which get converted into what they need to live. The leaf as well as the body of the Man act as compression converters. This means they compress the energy fields so that they can be transferred into the matter state. This is how the M fields of the Sun convert into the C and become the physicality of Earth.

As humans we do the same as the plants do. We breath in the CO<sub>2</sub> and it converts to C<sub>12</sub> and certain parts of that convert into C<sub>14</sub> and C<sub>16</sub> and become part of the CR energy released in the body. Our science only taught us that we breath in the O<sub>2</sub> and N, because they don't know about this other part of the plasma, and they wanted to keep it very simple. In a way, the sap in the trees and the blood flowing through our veins are doing the same thing, converting and supplying energy through M fields. Our bodies know how to extract only certain strengths of CO<sub>2</sub>, because we are always breathing in each others air. When we kiss or sleep next to each other we are exchanging CO<sub>2</sub>. And when a hundred of us are in a room together we exchange quite a lot of CO<sub>2</sub>, but we don't die from it, because we know how to extract just what we need. This is the same way the animals eat only certain parts of the grass in a field and leave the rest for the others. Some might eat only the top part, and others the middle part, but their Souls work together as a unit and make sure there is enough for everyone.

There are different C strengths that we get from the CO<sub>2</sub>, like the C<sub>12</sub> which then convert to C<sub>14</sub> and C<sub>16</sub>, and that connect us to the Universe (U). This is why we can dream at night and go out of the body with the Soul. It's not only the reduction in the blood pressure, but also that the CO<sub>2</sub> combination in the blood allows the C<sub>14</sub> and C<sub>16</sub> to reach our Soul and connect to the U. This is why our breathing dictates our ability to

dream, and at the same time shackles our Soul by entangling it with the brain. The blood carries the C12 and if that stops, it also stops the C14 to the Soul, and the Soul will leave the body. It's not just the Ca in the skull that is encaging the Soul. He seemed to be saying, that in certain cases when we feel that 'light-headedness,' it is that we are connecting with the Soul, and it can be dreaming at that time. It's interesting, because when I get that light headed experience the physicality gets afraid and tries to block the connection to the Soul, by saying, there is something wrong with the body. Maybe this is a place we can try to stop and make that connection with the Soul consciousness.

A very clear distinction was made. It's the Inertia of the C that dictates what we can absorb from the atmosphere of this planet, and not the C itself. To me this implies that the Carbon is not some inanimate matter state element. Rather it is a conscious Being that can decide what we can absorb of it. This triggers a deep introspection about the nature of life, where even the elements themselves can decide how they want to participate in Creation. He went on further to say, the C creates Inertia while it is floating around, I assume our atmosphere, and determines the GM field strength of the C14 and C16 that our Soul can absorb. The more purified the C12 becomes, the more purified the C14 becomes. (Maybe for C14 purified is not the right word. Perhaps it should be, we receive a higher volume of C14?) It creates a higher field strength and has a narrow bandwidth that allows us to go deeper, and through this get closer to our Creator. This is all controlled through our emotions. It's our emotion that tells us not to do wrong, and when we don't do wrong there is no attachment (to wrong emotions), and this allows the STM to directly connect to the P of the Man. The C in the P allows us to get closer to the Soul of the Creator (STC) through the Line of Connection of the H. What I understood is that this shows us scientifically how important our behavior in P is, and how it affects the Soul. The energy of our emotions dictates the Inertia, which really are the fields that determine what we can do in life. Our emotions are a reflection of the P on the STM. This has absolutely nothing to do with how the religions embedded the fear of punishment into our minds, if we do something bad. And this created a wrong subconscious inner attitude against being good. This knowledge is showing us that, scientifically, that we are controlling our life through our emotions and intentions. And that we really are in control. The meaning of 'I made Man in the image of Myself,' is that we carry everything inside us that the Creator has, from emotions to physicality. It's our responsibility what we do with it.

For years now KF has been enlightening Mankind to the Knowledge of Creation and more recently to the Cosmic Rays and how they create everything, and everything is connected through the H and C. The effect of this, is that we are starting to see the World of Science talking more and more about Quantum and Cosmic Energies. We know how each of the Souls are connected to the STM, and that is reflected in the physical Man by what he thinks and talks about. KF is working on systems that will show how the energy of the Creator is converted into CR and then to CO2 and then to P. This will help humanity come closer to the Plasma Science and the acceptance that both the Energy and the matter state work together.

In this teaching we have learned how easily the process of Creation works and how all life in the U is created from the single element of H plasma. The rest of the elements in the U are created from the reflection of the H and the interaction of itself with the local environment through the fields of Inertia. This is the same process as how Mass and Weight are created from field interactions and the same with the Density of fields. They say you cannot bend light, but if you can reflect light then you can bend it too. If we think about it, a light ray comes straight into a mirror and then it is reflected straight out, maybe this is why they think the light doesn't bend. But if you look at the whole length of the light beam, then it has been bent. But they will say, no, the light is still straight. The problem is they don't know that the light is really is a M field, which is influenced and interacts with other M fields. Therefore, in Plasma Science we can bend the light. But it requires the knowledge to do it. In the future we'll have to learn how to make mirrors for Cosmic Rays, then we'll be able to create like the Creator. It's the reflection of CR that creates the stars and galaxies and fills the Unicos with created things. In a more detailed understanding, it is actually the Cosmic Rays reflected in the light in the dimension of the H and C that manifest into P. This was shown last year in Beijing when we created gold from the fields. Now we understand that, that was just the beginning and in the U they don't use dynamic reactors, instead they use the knowledge of Inertia to confirm existence in the matter state.

In our Amino Acid (AA) or what we call, "Mr. COHN," it is divided into two parts. The H and C are always connected to the attributes of the Creator and Creation and can create the conditions of life anywhere in the U. And the O and N are part of the local manifestation of the P on that particular planet. Therefore, on Planet Zeus they might use O and Phosphorus and the Beings will be illuminated. The point is that if we test the blood of any creature in the U we'll find the H and C, which is the common denominator connection to the Creator. The rest is all based on the manifestation in the Time, Place, Position, and Possession of the Inertia of that Time and Place. With this knowledge we can replicate life anywhere in the U. The life will be created out of the spectrum of isotopes of the C in its energy field states, and not the matter state. And it's the same for the H and its energy states.

Our scientists have told us that human life started in Africa, then after a period of time they started migrating out of Africa and passed through the Straights of Hormuz and traveled to different parts of the world. In Plasma Science we can take that further and say, humans mutated according to the new Inertia fields of the land where they settled. The M fields of the local Inertia changed the body to fit that environment. This is why we have different races, with different emotions, behavior, and characteristics. It all depends on the interaction of the fields, and mainly the local Inertia. It's the same for the huge continent of Africa, where there are spectrums of Inertia field strengths according to the land, and this gets reflected into how those Souls will manifest their physical bodies and behave. This is where the differences come from, but in essence we all come from the same fields. There is no scientific basis for one race to think it is superior to another, except through its own lack of understanding the process of Creation.

In the future Mr. Keshe will teach us about how the Cosmic Rays create the DNA and how they dictate the RNA, which is the M field emotion of the cell. There is some hidden knowledge in this. The emotion of the cell was mentioned before, so we'll have to wait and see what secrets will be revealed about it.

Today's knowledge leads back into how we can transmute. We were told before that the breath and emotion are some of the keys to transmutation. So if the CO<sub>2</sub> converts to C<sub>14</sub>/C<sub>16</sub> and feeds the STM, then by holding the CO<sub>2</sub> in longer in our lungs, we'll add more energy to the Soul for transmutation. It's not just about holding the breath, there is much more to it. Cultures like India, China, and Tibet have developed sciences about breath control and how to use it for enlightenment. If we start messing around with our breath and we don't know what we are doing, we can end up with health, as well as psychological problems. Finding a qualified Master in this area is not so easy today, especially in the 'spiritual marketplace.' Something to remember is that 'qualified' means they have truly achieved what they are claiming to teach. And watch to see if they actually follow the Ethos of Mitra. Because humans are so ignorant and emotionally wounded, it is very easy to have a thriving Internet business of fools. If we can find a safe and effective breathing method, then it can be very helpful to practice it, and prepare for transmutation. Because now we know that the CO<sub>2</sub> connects us to Universal Carbon level. He said, on the other side of C<sub>16</sub> is C<sub>6</sub> and C<sub>8</sub> that would give us a better chance to connect to the Creator. That will be a future teaching. Then there was a hint that in the pure state of our Soul, we can connect to a C that doesn't have electrons. This is called, a flat energy and can exist without the matter state. This sounds like it is at the level of the STM, which also doesn't need the matter state. But again, the teachings are pointing us in the direction of looking deeper inside ourselves and understanding our emotions, and through that way learn to transmute.

When we speak about when the STM enters the body, we think of some kind of entity coming inside the fetus after about 10 to 12 weeks. Mr. Keshe changed our understanding today by saying, the STM doesn't enter the body. The way I understand it is, that all the cells have a central energy within themselves that allows them to function as a cell. When they are forming in the fetus there is no central command, they all work independently. Then they develop a common denominator energy that starts to connect all the cells together and eventually they develop a Central Command Center of the body and that becomes what we call, the STM. It seems that the creation of the STM comes from within the essence of the Energy of Life, which is an inner connection, rather than coming from outside. We know that the Energy of all the cells become the STP, but in essence everything actually comes from the Creator. Therefore, the STM doesn't come from outside, it comes from within the collection of Energies as it is needed. First, all of the development of the body has to proceed correctly and only when everything is functioning properly does the STM form. If for instance, the cells of the liver do not come to completion then fetus will miscarry, and the STM is not formed. The physical part of the body creates the brain as its Controller, and the Energy creates the STM, but it's the STM, whose authority is the true Ruler of the body. The body follows a very precise process of creation and now we are being gifted this understanding.

There are a lot of different research groups around the world that are working on developing the plasma technology (T), but they are hidden for security reasons. If you have been a Knowledge Seeker (KS) for a long time, then you will remember how people used to come on the KSW and demonstrate what they made and understood from the technology. In answer to the question about how to handle fear, Mr. Keshe said there is no single way to do it, because we are all different and we have to find what works for us. Nevertheless, fear does have a frequency and a M field strength, therefore we can use the T and the Cosmic Rays to resolve it. In the near future, KF will come out with some plasma products that will help in this area. In the meantime we can do our inner work and find the roots of the fear and what emotions and reactions they trigger and work to strengthen them.

KF is working on a way to personalize the T using computers. To work with the emotions is not just a simple Gans, rather it needs a mixture of Gans. Perhaps it will be like testing how a person reacts to a certain Gans and then feeding that information into a computer and then creating a complex mixture of Gans's specifically to handle the emotions of that person. The KS will need to learn more to go further in this.

The question about whether Markray would take part in the development in China, the answer is no. China will have a separate company and enter the Shanghai stock market. In fact he said, Markray will initially be a child of the Shanghai Stock Market. We have to wait and see what happens with the Iran and American war, because Mr. Keshe is an Iranian national and is the CEO of Markray. But my feeling is that it will all depend on what kind of space technology Mr. Keshe will allow to be released in public. Governments will then make exceptions as they always do, and call it something else. So we have to wait and see what happens.

For years America has been secretly developing technology to control the weather in their programs like HAARP. We know that the British starved to death 15 million Iranians to steal their oil towards the end of the First World War, and America has carried on this tradition. According to Mr. Keshe they have used their knowledge to create drought in Iran to starve its citizens. Of course, this has all been done secretly. The only way we know it, is because after the Iranians destroyed the center in Dubai and UAE that were housing the systems, it started to rain heavily in the Middle East. These kind of practices by humanity has to end.

The best news today was that Mr. Keshe has committed himself to personally see the change for humanity to be completed. He is working hard to help a few nations to adopt the Keshe Coin (KC) to help their people. Unfortunately, the leaders want some kind of bribe to implement it. Nevertheless, the work continues in the background but it has to be kept secret for security reasons. Knowledge Seekers are coming forward to help the process and hopefully next week they will demonstrate some advances in technology that they have made.

**Other Topics:**

We are creating systems for Man to see how energy of the Creator is converted into Cosmic Rays and then to CO<sub>2</sub>, and back to P. This is how one drop will create a fish, and one fish will create the Creator.

Thanks for listening.
